River Law as the central axis Many relevant laws start from the River Law and end with the River law which is the legal foundation of Japan's river administration The basic concept of the River Law fully revised in 1964 is that every river and its water is property for public use Rivers are therefore systematically and comprehensively administered in every basin by the river administrator

Flood Prevention and Remediation Flávio César Borba Mascarenhas, 2011 Human settlements have grown near watercourses since ancient times Water supply irrigation navigation wastewater conveyance and city defense are some of the uses that were responsible for this choice Even floods played an important role favoring the soil fertilization Man made actions however especially in urban watersheds significantly modify the natural water cycle increasing the magnitude of floods and their potential damages Consequently flood damages are one of the most important issues to be dealt with in the present days Several different studies show that floods are one of the most important natural hazards with several losses both in terms of lives and money Particularly in urban areas the amplification of floods may cause important economic losses and lead to critical social risks to the cities and their population when inundation reaches the built environment This situation is becoming more frequent each day Recent history shows that urbanization is an inevitable trend and today the most part of the world population lives in cities It is difficult however to adequately manage urban flood problems because flood risk and flood costs are not easy to quantify Traditionally flood risk and flood cost assessments face difficulties due to the subjective nature of these evaluations and to the inexistence of standardized methodologies This book tries to show different techniques and approaches to help in treating flood problems Chapters 1 and 2 show simplified mathematical modeling of floods and results of multifunctional landscape flood control measures in the city of Rio de Janeiro The remaining book chapters present remedial works against debris after floods in Venezuela and Measures for Mitigation of Flood areas in Japan There are also presented studies related with Flood Risk Assessment and Management in Mediterranean Basins The final chapter shows an interesting study related to the attitudes of residents in the Tokyo Bay area toward flood hazards

Public Spheres, Private Lives in Modern Japan, 1600-1950 Gail Bernstein, Andrew Gordon, Kate Wildman Nakai, 2020-03-17 The eleven chapters in this volume explore the process of carving out in discourse and in practice the boundaries delineating the state the civil sphere and the family in Japan from 1600 to 1950 One of the central themes in the volume is the demarcation of relations between the central political authorities and local communities The early modern period in Japan is marked by a growing sense of a unified national society with a long common history that existed in a coherent space The growth of this national community inevitably raised questions about relationships between the imperial government and local groups and interests at the prefectural and village levels Moves to demarcate divisions between central and local rule in the course of constructing a modern nation contributed to a public discourse that drew on longstanding assumptions about political legitimacy authority and responsibility as well as on Western political ideas

Environmental Design and Management for Sustainable Urbanism Takashi Ariga, 2025-03-31 This book responds to the need to rehabilitate the holistic urban environment by introducing planning approaches which focus on the Japanese idea of Satoyama Sustainable development has become a prime concern of planning and society is expending great efforts to achieving this end Appreciation of cities environmental assets has become more widely accepted and deeply taken to heart not only by specialists but also by citizens and communities The balance between human settlements and the natural environment has changed This has posed an environmental issue in that urban settlements engulf the greenbelts and water networks that help sustain the urban natural environment Given these issues we must consider a morphology toward creating a more sustainable urban system that regenerates the relationship between human settlements utilizing the architectural resources within our urban fabric and its interaction with the surrounding natural environments This book is a guide to the theory methodologies and practical applications of environmental design and city and regional planning of regenerative systems toward sustainable urbanism This book also explores the socio cultural and economic implications of sustainable urbanism and examines urban forms land use patterns and their built up environments that can result from the
