Technologies Mehul Bhatt,Hans Werner Gsger,2012 The development of smart assistive technology for personal living and public environments is an opportunity that has been recently recognized by research labs across the world A particular theme that has garnered attention in many countries is the problem of an aging population The combination of a much larger elderly population and the ever increasing cost of providing full time human care for them means that finding practical assisted living solutions for this group is becoming increasingly important Computing is the obvious choice to provide an answer to this growing problem but to have a real impact computer based assistive technologies will need to possess the ability to interact with and interpret the actions and situations of those they are designed to assist The papers in this book explore the diversity of the field of ambient intelligence as well as the wide range of approaches and variety of applications that may prove to be possible Consideration is given to how space action time and other contexts can be represented and reasoned about for use in sensory mapping multi agent interactions assisted living and even emergency responses Many techniques are examined variety represents one of the most important strengths of this area meaning that the weakness of one approach can be offset by the capability of others The book consists of research contributions dealing with the crucial notion of situational awareness within assistive smart systems emerging as an overarching concept An applied computer science character has been retained whilst bringing to the fore research projects where formal knowledge representation and reasoning techniques have been demonstrated to be applicable to areas within the broader field of ambient intelligence and smart environments *Digital Services in Crisis, Disaster, and Emergency Situations* Oliveira, Ldia,Tajariol, Federico,Gonalves, Liliana Baptista,2021-01-29 The contemporary world is characterized by the massive use of digital communication platforms and services that allow people to stay in touch with each other and their organizations On the other hand it is also a world with great challenges in terms of crisis disaster and emergency situations of various kinds Thus it is crucial to understand the role of digital platforms services in the context of crisis disaster and emergency situations Digital

Services in Crisis Disaster and Emergency Situations presents recent studies on crisis disaster and emergency situations in which digital technologies are considered as a key mediator. Featuring multi and interdisciplinary research findings, this comprehensive reference work highlights the relevance of society's digitization and its usefulness and contribution to the different phases and types of risk scenarios. Thus, the book investigates the design of digital services that are specifically developed for use in crisis situations and examines services such as online social networks that can be used for communication purposes in emergency events. Highlighting themes that include crisis management, communication risk, monitoring digital crisis intervention and smartphone applications, this book is of particular use to governments, institutions, corporations and professionals who deal with crisis disaster and emergency scenarios as well as researchers, academicians and students working in fields such as communications, multimedia, sociology, political science and engineering. *Military Operations in Response to Domestic Emergencies and Global Pandemics* Lindy Heineken, Christian Leuprecht, 2025-07-24. This open access book provides a comparative analysis of the deployment of the military in domestic operations, the use of the armed forces during the COVID 19 pandemic and the impact of that deployment on civil-military relations in 26 countries worldwide. The book examines the legal and constitutional regulations under which the military can serve in domestic roles and the extent of domestic deployment before the COVID 19 pandemic. It focuses on the roles in which the military served during the pandemic, the resources available and the readiness and effectiveness of the military response. The volume addresses whether or not the pandemic response was securitized, the extent of civilian oversight and control, the accountability measures in place and the impact of the COVID 19 deployment on the military's image. The volume captures the lessons learnt from the COVID 19 deployment and the implications for future force design, structure and organizational transformation. Since almost all countries used their military in some capacity to respond to the COVID 19 pandemic, this volume offers an opportunity to compare use of the armed forces to provide domestic humanitarian assistance and disaster response.

Information Systems Development for Emerging Public Sector Cross-sector Collaborations Kayvan Yousefi Mojir, 2018-09-28. Information systems (IS) seem prevalent in modern societies and have resulted in the rapid digitalisation of different societal sectors. One application domain of IS is emergency response, which is responsible for delivering essential services to save lives and minimise environmental damage in both small, frequent and large scale emergencies. Specific IS applications are in turn used in emergency response to support such aspects as decision making, communication, information sharing and the dispatching of resources. Public sector cut backs and a lack of professional resources have affected emergency response at the same time as natural disasters (e.g. forest fires, tsunamis, storms, terror attacks and wars in the Middle East) leading to mass migration have intensified in recent decades. At the same time, frequent small scale accidents continue to occur on a regular basis both in urban and sparsely populated areas. As a result, emergency response actors (first responders) are often placed under severe pressure. An emerging trend in response to these challenges

both in Sweden and internationally is to create cross sector forms of collaboration by combining alternative resources from various sectors. Such collaborations are relatively new and involve heterogeneous stakeholders. Therefore the thesis objective is to explore IS related opportunities, challenges and needs aimed at supporting heterogeneous actors in emerging cross sector collaborations in emergency response in order to enable and facilitate future related IS development. To achieve this a user centred approach was applied. A baseline study was performed followed by three case studies on co location of actors, co operative use of resources and semi professionals as first responders by performing interviews, focus groups, participant observation, Future Workshops, an exercise and an after action review. The thesis is based on case study research and qualitative research methods. Sociotechnical systems theory, the sociotechnical ensemble view and network governance were used as the analytical framework. As part of achieving the thesis objectives, experiences from applying user participation in the context of cross sector collaboration are also presented as part of the results. A context specific framework developed to systematise and explore various important aspects of cross sector collaboration in emergency response is also described. The results of this thesis indicate that the needs for IS in cross sector collaborations vary from simple smartphone applications to manage alarms, positioning and the dispatching of new resources to more sophisticated tools for sharing and viewing incident data. The results also indicate that these collaborations have the potential, e.g. resource redundancy, pooled competencies to increase total capacity to improve Swedish emergency response if supported by adequate IS/IT support. The major challenges are organisational, economic and juridical and the most prominent are ambiguities in actors' tasks and responsibilities and how to prioritise between ordinary work and new first response tasks. They must be addressed to enable certain IS functions, e.g. information sharing and positioning of resources. The results also highlight several institutional factors, e.g. mutual interest between members, collective problem solving, secrecy aspects which are believed to play a key role in the success or failure of the collaborations and which must be addressed in the development of IS support. The actors also have substantial basic needs for training, e.g. fire extinguishing, first aid and emergency supplies, e.g. fire extinguishers, healthcare kits. Applying user participation also faced challenges, the major one being the development of a future cross sector collaboration in a context that does not yet exist and involving stakeholders from resource strained organisations in doing so. The stakeholders and sometimes also the primary end users are partly unknown and tasks are undefined. As a response to these challenges, a combination of activities based on multiple design groups, scenario based Future Workshops, focus groups, the context specific framework, a practical exercise and an after action review was provided. The framework which was used to support data collection and user participation includes 15 dimensions, each intended to represent important aspects of cross sector collaboration. The thesis major contributions are the identified opportunities, challenges and need as a sociotechnical ensemble and generated and from several studies, thus being comparable. The thesis more theoretical contribution is the combined application of the sociotechnical ensemble view and network governance where the studied collaboration forms are

characterised as a hybrid form of networks and more traditional government mechanisms and where it is pointed out that network governance lacks explicit IS IT aspects In a wider perspective the research fields of IS and political science may cross fertilise each other when studying emerging cross sector collaboration in the public sector Identified user participation challenges relevant to the cross sector collaboration context suggestions on how they can be handled and the context specific framework are contributions that can be used in practical user centred IS development in similar contexts

The Impact of Specialized Training for Emergency Medical Services Specialists on the Accuracy of Triage in Emergency Departments Sultan Ibrahim Alkathiri,Abdullrahman Awad Alotaibi,Mohammed Yahya Alshehri,Mohammed Mansour Alotibi, In medical emergencies time is of the essence This requires each and every member involved in healthcare especially emergency departments ED to have a kind of precision which goes without question to make decisions rapidly and with the highest level of skill Similarly on such a sea of pain and noise where patients are nameless and faceless it is essential to prioritize patients and opt to help those who might be saved by some simple procedure that takes little time at all This skill called triage is at the heart of emergency care and makes sure that patients receive appropriate treatment when they need it most Triage has long been seen as a province of emergency rooms and the battlefield but how well it is done can depend much on skills and expertise In emergency medical services EMS today the field has shifted with specialized training programs playing an increasingly important role Training programmes seek to deepen the knowledge base and refine the judgment systems of paramedics EMTs and other EMS specialists The eventual result is that care given to patients once they step through those hospital doors becomes closely dependent on these programs This book entitled *The Impact of Specialized Training for Emergency Medical Services Specialists on Triage in Emergencies* will study how EMS completion rates affect triage decision making Key to this study is the relationship between specialized education and hands on training versus patient results accuracy and effectiveness of triage under crisis conditions in an emergency environment The book collates insights from research findings expert opinions case studies and interviews with people in the field to explain the critical role that EMS specialists especially those who have received advanced specialized training play in shaping initial ED assessments We study how this specialized training changes decision making processes the handling of patients who are critically ill or injured and how it can eliminate mistakes that arise when people makes judgments about patients trapped in battle conditions such as in the field This work seeks to highlight not just the profound impact of specialized training but also underscores the need to continually update and improve EMS training programmes in order to stay ahead of what are now rapidly growing challenges In this way we hope to provide valuable guidance for health professionals administrators policy makers and educators aiming to enhance patient care emergency services and the broader relationship between training and triage We aim by discussing both the theoretical frameworks and practices in specialized EMS training to highlight the unarguable links which exist between better emergency care systems

and an efficiently trained EMS personnel Such an issue looms vastly important as swift and timely decision making in triage too often hinges on the question of life or death Finally as you read these chapters we invite you to tread into a substantial topic how it is that advanced specialized training can significantly affect the outcome of emergency medical care and what new advances may be within reach for the whole triage process globally
