The authors examine Hume's distinctive views on causation, motivation, free will, moral evaluation, and the origins of justice, which continue to influence present-day philosophical debate. This collection will prove a valuable resource for students and scholars exploring Hume, British empiricism, and modern philosophy. **The Science of Describing** Brian W. Ogilvie, 2008-09-15. Out of the diverse traditions of medical humanism, classical philology, and natural philosophy, Renaissance naturalists created a new science devoted to discovering and describing plants and animals. Drawing on published natural histories, manuscript correspondence, garden plans, travelogues, watercolors, and drawings, *The Science of Describing* reconstructs the evolution of this discipline of description through four generations of naturalists. In the late fifteenth and early sixteenth centuries, naturalists focused on understanding ancient and medieval descriptions of the natural world, but by the mid-sixteenth century, naturalists turned toward distinguishing and cataloguing new plant and animal species. To do so, they developed new techniques of observing and recording, created botanical gardens and herbaria, and exchanged correspondence and specimens within an international community. By the early seventeenth century, naturalists began the daunting task of sorting through the wealth of information they had accumulated, putting a new emphasis on taxonomy and classification. Illustrated with woodcuts, engravings, and photographs, *The Science of Describing* is the first broad interpretation of Renaissance natural history in more than a generation and will appeal widely to an interdisciplinary audience.

Hume on the Self and Personal Identity Dan O'Brien, 2022-08-30. This book brings together a team of international scholars to attempt to understand David Hume's conception of the self. The standard interpretation is that he holds a 'no self' view: we are just bundles of conscious experiences, thoughts, and emotions. There is nothing deeper to us: no core, no essence, no soul. In the Appendix to *A Treatise of Human Nature*, though Hume admits to being dissatisfied with such an account, and Part One of this book explores why this might be so. Part Two turns to Books 2 and 3 of the *Treatise*, where Hume moves away from the fiction of a simple self to the complex idea we have of our flesh and blood selves: those with emotional lives, practical goals, and social relations with others. In Part Three, connections are traced between Hume and Madhyamaka Buddhism, Husserl, and the phenomenological tradition, and contemporary cognitive science.

Hume's Imagination Tito Magri, 2022-09-22. This book proposes a new and systematic interpretation of the mental nature, function, and structure, and importance of the imagination in Book 1 of *The Understanding* of Hume's *Treatise of Human Nature*. The proposed interpretation has deeply revisionary implications for Hume's philosophy of mind and for his naturalism.

epistemology and stance to scepticism The book remedies a surprising blindspot in Hume scholarship and contributes to the current lively philosophical debate on imagination Hume s philosophy if rightly understood gives suggestions about how to treat imagination as a mental natural kind its cognitive complexity and variety of functions notwithstanding Hume s imagination is a faculty of inference and the source of a distinctive kind of idea which complements our sensible representations of objects Our cognitive nature if restricted to the representation of objects and of their relations would leave ordinary and philosophical cognition seriously underdetermined and expose us to scepticism Only the non representational inferential faculty of the imagination can put in place and vindicate ideas like causation body and self which support our cognitive practices The book reconstructs how Hume s naturalist inferentialism about the imagination develops this fundamental insight Its five parts deal with the dualism of representation and inference the explanation of generality and modality the production of causal ideas the production of spatial and temporal content and the distinction of an external world of bodies and an internal one of selves and the replacement of the understanding with imagination in the analysis of cognition and in epistemology
