Severe Storm Engineering for Structural Design Michele G. Melaragno, 1996 In 1989 1990 and 1991 Hurricanes Hugo Andrew and Iniki pummeled the United States wrecking residences office buildings military installations and shopping areas The devastation has a profound effect on local communities industries and commerce Judging from the destruction these storms caused to buildings in their areas it is clear that we still have a great deal to learn about designing structures to withstand hurricane force winds This book for both the student and practicing architect or engineer explores wind velocity typical of storms such as these Weather conditions are translated into actual forces on a structure to be used to better design buildings that will resist further hurricanes Nuclear power plants and other sensitive structures receive special attention Building codes and standards in other countries are studied in correlation to the number of casualties suffered during a violent storm Specifically Bangladesh is offered as a case study of minimum standards of building construction while Australia is highlighted for having some of the most stringent regulations in the world

problems and the starting point is thinking about problems in a deconstructionist sense. By analysing design problems as sophisticated systems made up of simpler constituents and evolving a solution from known experience of such building blocks, it is possible to develop an approach that will enable the student to tackle even completely alien design scenarios with confidence. The other essential aspect of the design process, the concept of failure and its avoidance, is also examined in detail, and the importance not only of contemplating expected failure conditions at the design stage but also checking those conditions as they apply to the completed design is stressed. These facets in combination offer a systematic method of considering the design process, and one that will undoubtedly find favour with many students, teaching staff and practising engineers alike.
