Embodying Ambiguity Catriona MacLeod,1998 Embodying Ambiguity traces the shifts in the representation of the androgyny myth in the literature and aesthetics of the late eighteenth century and nineteenth century Catriona MacLeod examines important pedagogic implications of the androgyny ideal for Classical Romantic and Realist texts beginning with Aristophane s narrative of the origin of human sexuality in Plato s Symposium and including the hermaphroditic androgyny proposed by Winckelmann and the heterosexual complementary model found in Schiller and Schlegel

The Misused Love Letters and Regula Amrain and Her Youngest Son Gottfried Keller,1974 *Relays* Bernhard Siegert,1999 This book examines how one aspect of the social and technological situation of literature namely the postal system determined how literature was produced and what was produced within literature Language itself has the structure of a relay where what is transmitted depends on a prior withholding The social arrangements and technologies for achieving this transmission thus have had a particularly powerful impact on the imagination of literature as a medium The book has three parts The first part reconstructs the postal conditions of classic and Romantic literature the invention of postage in the seventeenth century which transformed the postal system into a service meant to be used by the population instead of by the prince alone the sexualization of letter writing which was introduced in the middle of the eighteenth century and changed the reading of a letter into an interpretation of intimate confessions of the soul and Goethe s turning of this new ontology of the letter into a logistics of literature whereby literary authorship was constructed by means of postal logistics with the precision of engineering The second part analyzes nineteenth century postal innovations that facilitated communication through letters and examines how literary works were able to live off such communication These innovations included the reform of the post office the invention of the postage stamp the Universal Postal Union which subjected letter writing to an economy of materials and uniform standards and the telegraph and the telephone which surpassed literature in terms of speed economy and analog signal processing In the third part on the basis of a close reading of Franz Kafka s letters to his typist fianc e the author demonstrates how postal logistics of love and authorship have worked in the era of modern postal systems and technical media Kafka s correspondence is deciphered as a war of nerves waged by means of all available techniques and conditions of transmission

The Design Culture Reader Ben

Highmore,2023-05-09 Design is part of ordinary everyday life to be found in every room in every building in the world While

we may tend to think of design in terms of highly desirable objects this book encourages us to think about design as ubiquitous from plumbing to television and as an agent of social change from telephones to weapon systems The Design Culture Reader brings together an international array of writers whose work is of central importance for thinking about design culture in the past present and future Essays from philosophers media and cultural theorists historians of design anthropologists cultural historians artists and literary critics all demonstrate the enormous potential of design studies for understanding the modern world Organised in thematic sections The Design Culture Reader explores the social role of design by looking at the impact it has in a number of areas especially globalisation ecology and the changing experiences of modern life Particular essays focus on topics such as design and the senses design and war and design and technology while the editor's introduction to the collection provides a compelling argument for situating design studies at the very forefront of contemporary thought
