Citizenship Revisited Peter Herrmann, 2004 Strangely citizenship has usually been considered as a matter of interest when it is questioned or even withheld The other way round usually citizenship is taken for granted as it is not being defined as such In consequence we find only a negative definition rather than a clear way of spelling out the meaning As globalisation spreads and deepens the question of citizenship becomes crucial for society It is already possible to see changes in voting patterns in such a country as France due to its immigration policies This has long been the case in America as well and is being felt there yet again by the effects of the citizenships of its newest immigrants The contributions in this volumes are dealing with

World Yearbook of Education 2005 David Coulby, Evie Zambeta, 2005-01-14 This volume deals with two major and apparently opposing forces within education and society globalization and nationalism Globalization is often considered in economic terms of continued growth of international trade and a concentration of wealth in corporate hands yet it also encompasses technological political and cultural change The World Yearbook of Education 2005 explores the role of the education sector in our globalized knowledge economy and considers the political implications of this in terms of monopolarity and the cultural consequences of homogenization and Americanization The other strand of this study nationalism remains a persistent force within education and society in all parts of the world and this volume examines the extent to which it can fuel conflict at all levels through prejudice and intolerance Concentrating on the epistemological consequences of nationalism leading international thinkers examine the extent to which it is reflected in the curricula of schools and universities around the world Finally the complex relationship between globalization and nationalism is explored and contributors explore the part that educational institutions and practices play in forming both agendas A wide range of perspectives are employed including post colonial discourse classical economics and sociological theory Nationalism and globalization are both ongoing processes and this volume makes a case for the central role of education in both through its potential to influence change and to act as benevolent force in shaping a global community

helping professions codes of ethics and decision making models have been the primary vehicles for determining what constitutes ethical practice These strategies are insufficient since they assume that shared meanings exist and that the contradictory universal principles of codes can be reconciled Also these tools do not emphasize the significance of context for ethical practice This book takes a new critical theoretical approach which involves exploring how social workers construct what is ethical in their work especially when they are positioned at the intersection of multiple paradoxes including that of two opposing responsibilities in society namely to care for others but also to prevent others from harm The book is built on narratives from actual front line workers and therefore is more applicable and grounded for practitioners and students offering many suggestions for sound practice It illustrates that an understanding of ethics differs from worker to worker and is heavily influenced by context workers values and what they take up as the primary discourses that frame their perceptions of the profession While recognizing the oppressive potential of social work the book is rooted in a perspective that ethical practice can contribute to a more socially just society
