Measuring Calcium and Calmodulin Inside and Outside Cells Ole H. Petersen, 2013-11-11 The study of signal transduction mechanisms has become one of the most important branches of biomedical science indispensable to understanding the normal actions of hormones neurotransmitters and other extracellular signaling molecules as well as many pathophysiological processes including inflammation and cancer In this volume the various techniques for measuring Ca^{2+} in the cytosol in the various organelles and in the immediate surroundings of individual cells are described in practical detail by experts Also included is a chapter on tracking calmodulin inside cells using fluorescence technology A Springer Lab Manual

Fundamentals of Intracellular Calcium Anthony K. Campbell, 2017-11-06 The definitive text on the key component for cell functions intracellular calcium This comprehensive book reveals the evidence for intracellular calcium as a universal switch in all animal plant fungal and microbial cells It shows how the components required for calcium signaling are named and classified covers the technology that has been developed to study intracellular calcium describes how calcium is regulated inside cells and how it works to trigger an event explains the role of intracellular calcium in disease cell injury and cell death reveals how many drugs work through the calcium signaling system and demonstrates how intracellular calcium is involved in the action of many natural toxins The book also illustrates how the intracellular calcium signaling system has evolved over millions of years showing why it was crucial to the origin of life Additionally the book promotes the importance of the molecular variation upon which the intracellular calcium signalling system depends Featuring more than 100 figures including detailed chemical structures as well as pictures of key pioneers in the field a bibliography of some 1000 references and a detailed subject index this definitive work provides a unique source of scholarship for teachers and researchers in the biomedical sciences and beyond Emphasizes two key scientific principles the first to show how intracellular Ca^{2+} acts as a switch to activate a wide range of cellular events and the second demonstrating how an analogue mechanism can be superimposed on such a process Written by an internationally recognized expert in the field Filled with images and references to facilitate learning Fundamentals of Intracellular Calcium is an all important text for post graduate students and researchers working in biomedicine and biochemistry It is also essential for undergraduate lecturers and their students in physiology medicine pharmacy and the biosciences

Hormonal Control of the Hypothalamo-Pituitary-Gonadal Axis Kenneth W. McKerns, 2013-04-17 The eleventh monograph and meeting of the Foundation on Hormonal Control of the Hypothalamo Pituitary Gonadal Axis was held in October 1983 at the Weizmann Institute of Science This monograph honors the memory of Professor Hans R Lindner a productive and innovative scientist greatly respected and admired by his colleagues When addressing the opening session I remarked that my impression of the Weizmann Institute was one or two large buildings housing the various departments This was my first visit to Israel and I was overwhelmed by the beautiful semi tropical gardens of the institute in a setting of shrubs and trees orange groves and flowers Sited among this seventy

five acres are over fifty buildings and residential areas for the staff and visiting scientists I saw pictures of this area when Dr Chaim Weizmann founded in 1934 the Daniel Sieff Research Institute the forerunner of the Weizmann Institute The site was sand dunes without a blade of grass That the desert shall bloom is illustrative of the progress made in Israel The topics of the monograph are grouped into twelve sections

High Content Screening D. Lansing Taylor, 2008-02-04 There has always been some tension between proponents of hypothesis driven and discovery driven research in the broad field of life sciences Academic research has been primarily focused on hypothesis driven research However the success of the human genome project a discovery driven research approach has opened the door to adding other types of discovery driven research to a continuum of research approaches In contrast drug discovery research in the pharmaceutical industry has embraced discovery driven research for many years A good example has been the discovery of active compounds from large chemical libraries through screening campaigns The success of the human genome project has also demonstrated the need for both academic researchers and industrial researchers to now understand the functions of genes and gene products The cell is the basic unit of life and it has been at the cellular level where function can be demonstrated most cost effectively and rapidly High content screening HCS was developed by Cellomics Inc in the mid 1990s to address the need for a platform that could be used in the discovery driven research and development required to understand the functions of genes and gene products at the level of the cell

Medicus ,2004 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings **Mathematical Modeling in Systems Biology** Brian P. Ingalls,2013-07-05 An introduction to the mathematical concepts and techniques needed for the construction and analysis of models in molecular systems biology Systems techniques are integral to current research in

molecular cell biology and system level investigations are often accompanied by mathematical models. These models serve as working hypotheses; they help us to understand and predict the behavior of complex systems. This book offers an introduction to mathematical concepts and techniques needed for the construction and interpretation of models in molecular systems biology. It is accessible to upper level undergraduate or graduate students in life science or engineering who have some familiarity with calculus and will be a useful reference for researchers at all levels. The first four chapters cover the basics of mathematical modeling in molecular systems biology. The last four chapters address specific biological domains: treating modeling of metabolic networks, of signal transduction pathways, of gene regulatory networks, and of electrophysiology and neuronal action potentials. Chapters 3-8 end with optional sections that address more specialized modeling topics. Exercises solvable with pen and paper calculations appear throughout the text to encourage interaction with the mathematical techniques. More involved end of chapter problem sets require computational software. Appendixes provide a review of basic concepts of molecular biology, additional mathematical background material, and tutorials for two computational software packages: XPPAUT and MATLAB that can be used for model simulation and analysis.

From Molecules to Networks Ruth Heidelberger, M. Neal Waxham, John H. Byrne, James L. Roberts, 2009-01-27. An understanding of the nervous system at virtually any level of analysis requires an understanding of its basic building block, the neuron. *From Molecules to Networks* provides the solid foundation of the morphologic, biochemical, and biophysical properties of nerve cells. All chapters have been thoroughly revised for this second edition to reflect the significant advances of the past 5 years. The new edition expands on the network aspects of cellular neurobiology by adding a new chapter, *Information Processing in Neural Networks*, and on the relation of cell biological processes to various neurological diseases. The new concluding chapter illustrates how the great strides in understanding the biochemical and biophysical properties of nerve cells have led to fundamental insights into important aspects of neurodegenerative disease. Written and edited by leading experts in the field, the second edition completely and comprehensively updates all chapters of this unique textbook. Discusses emerging new understanding of non-classical molecules that affect neuronal signaling. Full colour professional graphics throughout. Includes two new chapters. *Information Processing in Neural Networks* describes the principles of operation of neural networks and the key circuit motifs that are common to many networks in the nervous system. *Molecular and Cellular Mechanisms of Neurodegenerative Disease* introduces the progress made in the last 20 years in elucidating the cellular and molecular mechanisms underlying brain disorders including Amyotrophic Lateral Sclerosis (ALS), Parkinson disease, and Alzheimer's disease.

Introduction to Modeling Biological Cellular Control Systems Weijiu Liu, 2012-04-26. This textbook contains the essential knowledge in modeling, simulation, analysis, and applications in dealing with biological cellular control systems. In particular, the book shows how to use the law of mass balance and the law of mass action to derive an enzyme kinetic model, the Michaelis-Menten function, or the Hill function; how to use a current-voltage relation, Nernst potential, equilibrium equation, and Hodgkin and

Huxley's models to model an ionic channel or pump and how to use the law of mass balance to integrate these enzyme or channel models into a complete feedback control system. The book also illustrates how to use data to estimate parameters in a model, how to use MATLAB to solve a model numerically, how to do computer simulations, and how to provide model predictions. Furthermore, the book demonstrates how to conduct a stability and sensitivity analysis on a model.

Photobiology of Higher Plants Maurice S. McDonald, 2003-06-02. The *Photobiology of Higher Plants* offers a comprehensive, balanced coverage of both photosynthesis, including physiology and global aspects, and photomorphogenesis in plants. An accessible, student-friendly approach to the subject is taken, providing the reader with a useful historical perspective and showing how this fascinating subject has evolved. All aspects of plant biochemistry and plant physiology are included, with the fundamentals of the subject rigorously covered. Each chapter includes numerous references to provide a useful starting point for those wishing to learn more about the subject. Provides combined coverage of both photosynthesis and photomorphogenesis in plants. Includes an extensive glossary designed to provide easy access to key terms. Aimed at students in Botany, Plant Science, Agriculture, and Forestry. A useful reference for postgraduates and researchers working in the field.

Fundamentals of Receptor, Enzyme, and Transport Kinetics (1993) John C. Matthews, 2017-11-22. *Fundamentals of Receptor, Enzyme, and Transport Kinetics* is the first book to pull together the most important topics in receptor, enzyme, and transport kinetics into a concise, easy-to-use format. Numerous equations are included, and key equations are graphed. For each graphed equation, important features are carefully explained. The book is organized so that simple material is presented first, providing a firm foundation on which to cover the advanced topics which appear later. Terminology used throughout the book is consistent with that used in scientific literature, and concepts are explained using analogies from daily life. The book also features two important appendices that will be particularly useful learning tools. The first appendix outlines all of the key equations from the text and indicates their use. The second appendix is a set of sample calculation problems and their solutions. *Fundamentals of Receptor, Enzyme, and Transport Kinetics* is an excellent text reference for pharmacologists, biological chemists, experimental biologists, neurochemists, neurotoxicologists, physiologists, and toxicologists. It is also suitable as a graduate-level text in pharmacology and medical pharmacology.
