

Psychological Assessments of Children

Common Components of Assessments

Psychological assessment of children is used to help clinicians, educators, and families have a better understanding of behavior and cognition, as they relate to overall development. Using a combination of approaches and assessment methods, psychologists attempt to understand not only a child's overall level of functioning, but also any meaningful pattern of strengths and weaknesses of their skills that may help with plans for interventions. That information and perspective may assist in planning for the child's medical, social and educational needs. Psychological assessment in particular, may be helpful by offering any or all of the following:

- Delineation of baseline functioning in one or more areas of concern
- Quantification and qualitative description of disturbances to some area of functioning
- Assistance in diagnosing relevant syndromes (e.g., Autism, ADHD)
- Monitoring changes in skills or functioning over time
- Monitoring the progression of an illness or disease process
- Tracking recovery from an illness or injury
- Development of intervention programs, based on current assessment functioning
- Description of the cognitive, emotional, and behavioral processes that will impact the child's functioning in school, work, and social situations
- Recommendations about a child's need for supervision or other environmental accommodation
- Guidance to parents and guardians on life decisions (e.g., school placement)

Palmer, 1983 *Educational and Psychological Assessment of Exceptional Children* H. Lee Swanson, Billy L. Watson, 1982 *The Oxford Handbook of Child Psychological Assessment* Donald H. Saklofske, Vicki L. Schwann, Cecil R. Reynolds, 2013-03-20 Psychological assessment has always paralleled the growth of psychology and its specialties and it is not an overstatement to say that measurement and assessment are the cornerstones of psychology providing the tools and techniques for gathering information to inform our understanding of human behavior However the continued growth and new developments in the assessment literature requires an ongoing examination of the principles and practices of central importance to psychological assessment The Oxford Handbook of Child Psychological Assessment covers all areas of child and adolescent assessment Leaders in the field summarize and synthesize state of the science assessment theories techniques and applications Placing an emphasis on clinical and psychoeducational assessment issues chapters explore issues related to the foundations models special topics and practice of psychological assessment Appropriate as a desk reference or a cover to cover read this comprehensive volume surveys fundamental principles of child assessment including ability achievement behavior and personality covers the role of theory and measurement in psychological assessment and presents new methods and data **Understanding Psychological Testing in Children** Stewart Gabel, G.D. Oster, S.M. Butnik, 1986-08-31 There is a considerable amount of interest within pediatrics and primary health care that is currently being directed toward the behavioral and emotional problems of childhood Traditionally these areas have been emphasized by child psychiatrists child psychologists and psychiatric social workers Now however the detection

and in some cases the assessment and treatment of children with these types of disturbances fall within the province of primary child health care professionals. Even when the child psychiatrist or child psychologist provides the primary mental health treatment for the child, specialists such as pediatricians, family physicians, pediatric nurses, pediatric nurse practitioners, and speech therapists remain instrumental in support of the ongoing psychotherapeutic process as providers of some other aspect of total health care to the child and family. For these pediatricians, family physicians, and other nonpsychologist primary health care providers, it is essential to acquire an understanding and effective working knowledge of important psychological information and concepts to utilize within their own framework and professional responsibilities. In order that this may be accomplished, these professionals with limited backgrounds in psychology must better understand how psychologists themselves assess children and how they derive the conclusions reflected in the statements and reports that are shared with members of their own and other disciplines. In short, nonpsychologists must become substantially more familiar with psychological assessment, particularly with psychological testing and the subsequent reporting of results.
