Physiological Aspects of Dryland Farming U. S. Gupta, 1976 *Physiological Aspects of Dryland Farming* U. S. Gupta, 1977-01-01 **The Literature of Soil Science** Peter McDonald, 1994 A collection of 14 discussions of the past and present literature about soil science The topics include a historical survey bibliometrics introduction into developing countries societies and their publishing influence information systems core monographs primary journals maps and other aspect **Advances in Plant Physiology** P. C. Trivedi, 2013-12-30 In the present scenario with the increasing pressure posed by a rapidly growing population and diminishing per capita arable land and sources of irrigation the role of plant physiologists in increasing agricultural and horticultural production by economically viable means is significant The present book incorporates articles covering latest information on the varied aspects of plant physiology like diagnosis and management of physiological disorders in fruit production physiology of vegetable crops breeding crops for dryland conditions effect of sulphur dioxide on growth photosynthesis antioxidant enzyme activities and so on Topics such as abiotic stress macronutrient stress and stress caused by pollutants also form part of the book Articles on the effect of herbicides growth hormones photoquality on germination and physiology of rice and groundnut provide useful information for improving crop yield This book would serve as a useful reference for teachers scientists and planners in the fields of Botany Plant Physiology Agriculture Forestry and related fields *Physiological Aspects of Dryland Farming* U.S. ed GUPTA, 1984 Physiological principles of dryland crop production Drought injury and resistance of crop plants Root patterns in crops as related to water and nutrient uptake Role of mulches in dryland agriculture The effect of humidity on crop production Wind effects and their amelioration in crop production Role of antitranspirants in arid agriculture Photorespiration in relation to crop yield Heat united concept of crop maturity Physiological Aspects of Dryland Farming U.S. GUPTA (ed), 1975

Agrotechnology for Dryland Farming 2nd. Revised Ed. A.M. Dhopte, 2017-01-01 It is known that dryland farming is not remunerative due to several constraints Location specific technologies have been evolved for yield stabilization in dryland farming and conservation of fragile ecosystem by sustainable use of soil and water resources Drought and flood situations are experienced some where in the country inspite of plentiful resources of waters unshine hours but poverty among farmers still exists This is a point of serious concern Agrotechniques are alone the answer for low productivity 0.8 t ha of 90% rainfed farming To feed over one billion galloping population of country there is a need to increase the productivity to 1.5 t ha by 2010 AD This book deals with seed soil watersheds crop weed and nutrient management use of weather forecast measure to save crops under abiotic stresses like drought and flooding selection of crops and variety reclamation of degraded land organic recycling agro meteorological approaches water requirement early harvest on physiological maturity agro hydro modelling and suitable medicinal and aromatic crops to make dry farming remunerative for welfare of common farmers This is the first comprehensive book where large number of agro techniques are incorporated

Chapters are written by eminent scientists of national repute who have devoted their life time to solve probable problems of dryland Agro techniques can well be adopted with ease by farmers through extension agencies to avoid bankrupsy Book includes all relevant aspects of rainfed farming and is therefore a valuable addition in Dryfarming and meets the expectations of all those interested in rainfed farming in the country and abroad Long outstanding demand has thus fulfilled with this book The novel approach of editor has made the readers task quick and minimized their efforts by compiling all agro techniques together at one place for benefit of farmers *Sustainable Development of Dryland Agriculture in India* R.P.

Singh,2011-01-01 There are chapters on varied topics covering the major gamut of dryland agriculture The topics covered by eminent scientists are Dryland agricultural research in India a historical perspective The eminence of authors and the institutions they represent gives credence to the contents of the book Research and development workers all would like to possess this book for ready reference and use Rainfed Farming Development in Central India G.P. Verma,Y. P.

Singh,2017-01-01 This book entitled Development of Rainfed Farming in Central India has 10 chapters viz 1 Problems and prospects of Rainfed Farming 2 Present status and strategy of Rainfed Farming Development 3 Land and water resources 4 Technology for watershed based Rainfed Farming Development 5 Land and water management practices 6 Improvement of productivity of rain water 7 Cropping systems and crop management practices 8 Planning for aberrant weather conditions and drought management 9 Farm machinery and implements and 10 Integrated farming systems for livelihood security In support of various statements made in different chapters reliable data have been presented in 62 tables Further the book is well illustrated through 24 figures and sketches The book will serve as a text book for Watershed management Dry farming courses for B Sc Ag students as a reference book of M Sc Ag students of various Agricultural universities as a manual for field workers of the Department of Agriculture a good teaching media for teachers of Agricultural universities and a thought provoking material for those responsible for planning and executing development projects on rainfed dry farming and watershed management *Sustainable Dryland Farming* A.M. Dhopte,2020-10-09 Sustainability is extremely important in

dryland farming under global climatic change Technology devised by various agricultural institutions is provided in this book Variation in environmental factors may influence entire ecological system which may not be ideal for agriculture Under such global scenario plant growth is under geopardy New varieties have to be developed to suit the varied climate or crop strategy in view of crop domain suiting ideal available temperature has to be framed to make dryland farming sustainable Various agrotechnology needs to be adapted to avoid depletion in productivity Global climatic change in future may limit the productivity of available varieties Corporate farming may come to rescue the problem under present scenario Various agrotechnologies described in this book may help the farmers and planners to overcome the situation in future Critical problems have been dealt with probable solutions to suit the requirements Multicropping system organic farming watersheds promotion reclamation of degraded soils soil health cards use of portrals of weather forecast early harvest on physiological

maturity and use of instant remedies timely under unfavourable season shall ease the failure of crop Long outstanding demand has thus fulfilled with this book Water and Crop Growth A.K. Kolay,2008 No crop can be grown without being adequately supplied with the requisite amount of water at the proper time A thorough knowledge of the hydrological cycle amount and distribution of rainfall water resources and irrigation projects in India facilitates efficient utilization of water for crop production Inadequate supply of water to crops in semi arid and arid regions adversely affects agricultural production Properties of water the mode of its entry into the soil and its absorption by roots of crops are important for irrigation This necessitates accurate determination of the soil moisture content the plants and available water which is essential for growth and yield of crops Its deficiency adversely affects their growth and yield Irrigation must be extended to unirrigated areas in order to increase the production of food fibre and fodder for which we must know the source of irrigation water units and methods of measurement of water methods of irrigating crop fields factors affecting the choice of irrigation methods the degree of the suitability of the available water for irrigating crops and the factors affecting the suitability of water for irrigation As water is a relatively scarce commodity we must know whether water of a little inferior quality can be utilized to irrigate crops In addition we must be familiar with the precautions which need to be taken in this regard The accumulation of excess water in the soils of the crop fields affects the growth of crops adversely enough to reduce their yields Choice of the method of land drainage varies with the variation in the topography of the land It is also necessary to rectify the causes of waterlogging to bring the waterlogged land back under the plough to increase agricultural production This necessitates drainage investigation and laying out of the proper drainage system Water requirement of crops depends on the climate and the crop More water is required to produce crops in the arid region than in the humid region Crops like paddy and sugar cane require much larger amount of water than finger millet and pearl millet The book extensively deals with all these aspects related to soil and crop production and suggests measures to enhance productivity through water conservation and proper management of water resources It will be highly useful for the students teachers and researchers working in this field Besides agriculturists and general readers will also find it useful and informative *Advances in Agronomy* ,2009-05-08 *Advances in Agronomy* continues to be recognized as a leading reference and a first rate source for the latest research in agronomy As always the subjects covered are varied and exemplary of the myriad of subject matter dealt with by this long running serial Maintains the highest impact factor among serial publications in agriculture Presents timely reviews on important agronomy issues Enjoys a long standing reputation for excellence in the field **Text Book of Rainfed Agriculture and Watershed Management** P. L. Maliwal,2020-07-14 The book Textbook of Rainfed Agriculture and Watershed Management has been written to fulfill the requirement of undergraduate students of agriculture faculty considering the syllabus of V Dean s committee of ICAR This book attempt to present the available information on dryland rainfed agriculture and watershed management in a very simple and lucid language in easily understandable manner The

book contains chapters on an introduction to rainfed agriculture soil and climate drought soil and water conservation techniques water harvesting crop management contingent crop planning for aberrant weather conditions and watershed management The student community may harness the benefit from this book by understanding the fundamentals of dryland rainfed agriculture and watershed management I hope this book will be very useful for the students teachers extension specialists and others interested in rainfed agriculture

Rainwater Management: Theory and Practice M.L. Jat, O.P. Gill, B.S. Deora, Vivek Kumar, 2017-03-01 Rainwater Management Theory and Practice is a comprehensive treatise on water management based on water harvesting techniques for management of storage water for irrigation purpose irrigation water management This book primarily designed to cater to the needs of undergraduate and postgraduate students of agricultural engineering agricultural and soil water engineering research scholars professionals and policy planners associated with rainwater management dryland farming and irrigation water management It covers major topics on water harvesting and design of water harvesting structures and recycling of harvested rainwater aspects Entire content has been divided into the 22 chapters with solved examples and case studies A sincere attempt has been made to compile and present the text in quickly understandable term well drawn diagrams understanding the rainwater management and livelihood security aspects of dryland and irrigated farmers This book could be a text book for undergraduate and postgraduate students a reference tool for professional and good teaching material for teachers in the field of rainwater management and irrigation management under dryland ecosystem and also for the scientists working in the field of rainwater and Irrigation water management

Methods of Studying Root Systems W. Böhm, 2012-12-06 Root research under natural field conditions is still a step child of science The reason for this is primarily methodological The known methods are tedious time consuming and the accuracy of their results is often not very great Many research workers have been discouraged by doing such root studies The need for more information on the development and distribution of plant roots in different soils under various ecological conditions is however obvious in many ecological disciplines Especially the applied botanical sciences such as agriculture horticulture and forestry are interested in obtaining more data on plant roots in the soil This book will give a survey of existing methods in ecological root research Primarily field methods are presented techniques for pot experiments are described only so far as they are important for solving ecological problems Laboratory methods for studying root physiology are not covered in this book Scientific publications on roots are scattered in many different journals published all over the world By working through the international root literature I found that about ten thousand papers on root ecology have been published at the present This is not very much compared with the immense literature on the aboveground parts of the plants but is however too much to cite in this book

Abiotic Stress Tolerance in Crop Plants Bidhan Roy, Asit Kumar Basu, 2009 Abiotic stresses have

become an integral part of crop production One or other persist either in soil water or in atmosphere The information in the areas of injury and tolerant mechanisms variability for tolerance breeding and biotechnology for improvement of crop plants against abiotic stresses are lying unorganized in different articles of journals and edited books This information is presented in this book in organized way with up to date citations which will provide comprehensive literatures of recent advances More emphasis has been given to elaborate the injury and tolerance mechanisms and development of improved genotypes against stress environments This book also deals with the plants symptoms of particular abiotic stress reclamation of soil and crop cropping pattern to over come the effect of adverse condition s Each has been laid out with systematic approaches to develop abiotic stress tolerant genotypes using biotechnological tools Use of molecular markers in stress tolerance and development of transgenic also have been detailed Air pollution and climate change are the hot topic of the days Thus the effect of air pollution and climate change on crop plants have been detailed in the final three s of this book Under abiotic stress plant produces a large quantity of free radicals oxidants which have been elaborated in a separate Oxidative Stress This book has been divided into seven major parts physical stress salt water stresses drought and waterlogging temperature stresses heat and cold metal toxicities aluminium iron cadmium lead nickel chromium copper zinc etc and non metal toxicities boron and arsenic oxidative stress and finally atmospheric stresses air pollution radiation and climate change Hope this book will be of greater use for the students and researchers particularly Plant Breeders and Biotechnologists as well as the Botanists to understand the injury and tolerance mechanisms and subsequently improvement of crop genotypes for abiotic stresses
