Progreb In Automatic Diatom Identification:

Automatic Diatom Identification Micha M Bayer,Hans Du Buf,2002-07-12 This is the first book to deal with automatic diatom identification It provides the necessary background information concerning diatom research useful for both diatomists and non diatomists It deals with the development of electronic databases image preprocessing automatic contour extraction the application of existing contour and ornamentation features and the development of new ones as well as the application of different classifiers neural networks decision trees etc These are tested using two image sets i a very difficult set of *Sellaphora pupula* with 6 demes and 120 images ii a mixed genera set with 37 taxa and approximately 800 images The results are excellent and recognition rates well above 90% have been achieved on both sets The results are compared with identification rates obtained by human experts One chapter of the book deals with automatic image capture i e microscope slide scanning at different resolutions using a motorized microscope stage autofocusing multifocus fusion and particle screening to select only diatoms and to reject debris This book is the final scientific report of the European ADIAC project Automatic Diatom Identification and Classification and it lists the web sites with the created public databases and an identification demo

Modern Trends in Diatom Identification Gabriel Cristóbal,Saúl Blanco,Gloria Bueno,2020-05-28 High resolution images of phytoplankton cells such as diatoms or desmids which are useful for monitoring water quality can now be provided by digital microscopes facilitating the automated analysis and identification of specimens Conventional approaches are based on optical microscopy however manual image analysis is impractical due to the huge diversity of this group of microalgae and its great morphological plasticity As such there is a need for automated recognition techniques for diagnostic tools e g environmental monitoring networks early warning systems to improve the management of water resources and decision making processes Describing the entire workflow of a bioindicator system from capture analysis and identification to the determination of quality indices this book provides insights into the current state of the art in automatic identification systems in microscopy

Automatic Identification of Diatoms Stefan Fischer,2002 **Freshwater Diatom Identification Manual** Yong-Kyoo Song,2002 *An Illustrated Manual for Introductory Work in Diatom Identification*

,1965 **Diatoms** Archana Tiwari,Ashok Pandey,Pau-Loke Show,Parameswaran Binod,2023-09-14 This reference book covers the ecological impact and biotechnological applications of diatoms Diatoms contribute to 40% of primary productivity in aquatic ecosystems They have a unique biomonitoring ability and sensitivity toward different pollutants in wastewater and are thereby a tool for ecotoxicological monitoring The book discusses the need for newer diatom based indices for wastewater quality analysis It describes the nutraceutical value of the myriad compounds like omega 3 fatty acids DHA polysaccharides and phenols in diatoms It also elaborates on the challenges in sustainable diatom biorefinery This book is meant for microbiologists biotechnologists and marine biologists Identification of Freshwater Diatoms from Live Material E.J. Cox,1996-08-31 This book is the first to provide an identification key to this important freshwater group of algae which

enables the user to work from live specimens The use of fresh material means that time consuming preparation techniques can be avoided enabling analyses to be made within a short time of collection Also the diatoms can be counted identified and studied at the same time as other algae in the sample The book provides a general introduction to the diatoms including a resume of the variety of chloroplast forms encountered a review of colony types a guide to shape terminology and also information on how to measure cells The keys are designed for the specialist and the non specialist alike allowing two points of entry and the identification of most common taxa to species level When cleaned material is necessary for unequivocal identification this is indicated The book also contains a list of all species included with brief ecological notes on occurrences and distribution along with a glossary of terms This book will be of immense use to biologists studying algal communities in freshwater ecosystems and particularly to those involved in monitoring programmes The increasing realization of the importance of algae to the health of aquatic ecosystems and the developing use of diatoms as environmental indicators means that this volume will become an invaluable aid to the water industries and environmental protection agencies
