Europeans and their introduced Old World animals forced the Andean camelids away from the Pacific coast creating the mistaken impression that camelids were exclusively high altitude animals Bonavia also addresses the diseases of camelids and their population density suggesting that the original camelid populations suffered from a different type of mange than that introduced by the Europeans This new mange he believes was one of the causes behind the great morbidity of camelids in Colonial times In terms of domestication while Bonavia believes that the major centers must have been the puna zone intermediate zones he adds that the process should not be seen as restricted to a single environmental zone Bonavia s landmark study of the South American camelids is now available for the first time in English This new edition features an updated analysis and comprehensive bibliography In the Spanish edition of this book Bonavia lamented the fact that the zooarchaeological data from R S MacNeish s Ayacucho Project had yet to be published In response the Ayacucho s Project s faunal analysts Elizabeth S Wing and Kent V Flannery have added appendices on the Ayacucho results to this English edition This book will be of broad interest to archaeologists zoologists social anthropologists ethnohistorians and a wide range of students
