## **Progress In Acetabularia Research:**

**Progress in Acetabularia Research** International Research Group on Acetabularia. Meeting, 1977  
**Acetabularia Research** Christopher L. F. Woodcock, 1977      Progress in Phycological Research, 1982      **Progress in Experimental Embryology in Aquatic Plants and Animals** Hans-Jurg Marthy, 2012-12-06 The NATO Advanced Study Institute on Experimental Embryology in Aquatic Plant and Animal Organisms was attended by more than 70 participants including 15 invited main lecturers from 18 different countries In accordance with the main purpose of the meeting senior scientists postdoctoral investigators and graduate students working in areas of descriptive and experimental embryology classical molecular and developmental biology physiology and biochemistry etc were brought together for two weeks as a community with a strong common interest in development that is the multiple phenomena and mechanisms in molecular cellular genetic and organismic terms observed in the development of aquatic organisms Initial concern that the great variety of biological models as well as of research subjects would harm the scientific quality and coherency of the course was unnecessary It was exactly this breadth which made the Institute worthwhile for each of the participants Since many of the students were younger scientists starting a career it was the main goal of the course to offer a concise overview of selected system models of primarily aquatic organisms and to present and discuss research carried out in the past and in progress Thus each main speaker gave two in depth lectures one in which he presented an overview of his model and another dealing with current investigations      *Handbook of Phycological Methods: Developmental and cytological methods*, edited by E. Gantt Elisabeth Gantt, 2008      **International Review of Cytology**, 1998-04-18 International Review of Cytology presents current advances and comprehensive reviews in cell biology both plant and animal Articles address structure and control of gene expression nucleocytoplasmic interactions control of cell development and differentiation and cell transformation and growth Authored by some of the foremost scientists in the field each volume provides up to date information and directions for future research Acetabularia The Role of the Dynactin Complex in Intracellular Motility Dual Mechanisms of Apoptosis Induction by Cytotoxic Lymphocytes Drought Induced Responses in Plant Cells Peptidergic Control of the Corpus Cardiacum Copora Allata Complex of Locusts      **Cytomorphogenesis in Plants** Oswald Kiermayer, 2012-12-06 In 1958 E BUNNING published a book in the former series Proto plasmatologia entitled Polarität und ungleiche Teilung des pflanzlichen Protoplasten polarity and unequal division of the plant protoplast in which for the first time results of experimental plant cytomorphogenesis were reviewed This book was based completely on light microscopic observations and rather simple experimental techniques Since then our knowledge of basic cytomorphogenetic mechanisms has greatly increased especially with the introduction of modern ultrastructural biochemical and sophisticated experimental methods so that the field of cytomorphogenesis in our days should be considered a separate discipline within the general field of cell biology This book Cytomorphogenesis in Plants represents a necessary attempt to bring together current knowledge in this field of research on a comparable basis

Unfortunately enormous gaps in our understanding of the underlying principles of cytomorphogenetic events still exist Therefore it seemed reason able to present a book composed of individual chapters each written by experts for a defined experimental system Each chapter represent a separate treatise with its own references hence it was not possible to avoid some overlap both in the text and in the literature of the chapters without destroying the uni formity of the respective article

Lobban,Michael James Wynne,Lobban,1981-01-01 **Advances in Marine Biology** ,1976-12-14 *Advances in Marine Biology* **The Cytoskeleton of the Algae** Diedrik Menzel,2024-12-20 The Cytoskeleton of the Algae provides a comprehensive examination of the structural features of the cytoskeleton in phylogenetic branches of algae The book also analyzes the possible functions of cytoskeletal components using structural physiological genetic and molecular approaches Many taxa are described in detail mirroring the dramatic progress that has been made in recent years in this new research field Many unique structural elements and motility phenomena are described for the first time and other features common to all plant cells such as cell polarity cytoplasmic streaming mitosis cell wall deposition and contractile events are analyzed using algae as experimental model systems The Cytoskeleton of the Algae reflects the enormous impact that research on the algal cytoskeleton has on both phycology and plant cell biology and it will serve as an excellent reference volume for researchers in this area *Membranes and Circadian Rythms* Jean-Luc Guisset,Therese vanden Driessche,Ghislaine M. Petiau-de Vries,2012-12-06 Rambling of an elderly biochemist Most biochemists of my generation who were trying to discover the pathways of metabolism simply ignored membranes or regarded them as a nuisance Think of the difficulties experienced in studies on cytochromoxidase which one could not separate from insoluble material or again of the desperate efforts during a quarter of a century to unravel oxidative phosphorylation without paying much attention to lipidic membranes although the system was known to be associated with them Hence the amazement and the general skepticism that met at first Mitchell s theory which was giving membranes the central function they deserve in oxidative phosphorylation and photosynthesis This I believe was a turning point enzymologists thereafter became aware of the importance of the membranes Neurophysiologists of course had long been interested in the outer cell membrane with its electrical properties and the ion potentials Histologists and electronmicroscopists also who observed inside the cell organelles of which membranes are essential components nucleus nucleoli mitchondria lysosomes Golgi apparatus endoplasmic reticulum chloroplasts For them at least a cell did not look like a mere bag full of enzymes and small molecules they knew they could see that it is a highly structured system divided into many compartments by membranous formations *International Review of Cytology* Geoffrey H. Bourne,James Frederic Danielli,1982 *Summaries of Projects Completed in Fiscal Year ...* National Science Foundation (U.S.),1979 *Proteins and Nucleic Acids* Abraham Marcus,2014-05-10 The Biochemistry of Plants A Comprehensive

Treatise Volume 6 Proteins and Nucleic Acids provides information pertinent to the nucleic acids and the regulation of the expression of this information This book presents the processes by which the nucleic acids are finally expressed as proteins Organized into 14 chapters this volume begins with an overview of the overall structure of eukaryotic genomes with emphasis on higher plant DNA This text then examines the enzymes involved in the cleavage and degradation of DNA Other chapters provide a critical assessment of eukaryotic nucleic acid polymerases This book discusses as well some examples from plant mitochondrial systems The final chapter deals with two special areas of plant biology where the expression of the nucleic acids is seen in striking relief the formation of plant tumors and the growth and expression of plant viruses This book is a valuable resource for plant biochemists molecular biologists senior graduate students and research workers

**Eleventh International Seaweed Symposium** Carolyn J. Bird, Mark A. Ragan, 2012-12-06 *Photosynthesis V2* Govindjee, 2012-12-02 Photosynthesis Volume II Development Carbon Metabolism and Plant Productivity provides a basic understanding of photosynthesis This book also explains how to manipulate photosynthesis and improve the overall rate of photosynthesis of a single plant It focuses on the use of NADPH and ATP in bicarbonate fixation Comprised of 16 chapters this book covers topics beginning with the concept of photosynthesis It further discusses manipulating the genetics and molecular biology of the system In addition it explains the biogenesis of photosynthetic apparatus photorespiration and environmental regulation among others As the chapters progress the topics discussed also increase in terms of technical and scientific concepts as seen in Chapters 10 and 11 These focus on the translocation of photosynthates and leaf and canopy behavior The application of the knowledge about photosynthesis to plant productivity is also discussed A chapter is dedicated to it including various opinions in the said subject matter Chapters 14 and 15 contain special topics on canopy photosynthesis and yield in soybean as well as the effect of bicarbonate on photosynthetic electron transport This book will be a reference source for researchers It will also be an introductory book for graduate students specializing in plant biology biophysics and physiology agronomy and botany Molecular Cytology V1 Jean Brachet, 2012-12-02 Molecular Cytology presents an integrated version about the morphology and biochemistry of the cell This two volume book focuses on the dynamic aspects of cytology and on the nucleocytoplasmic interactions in unicellular organisms and eggs The first chapter covers the history of cell cytology and nucleic acids as well as the uniformity and diversity in cell The book then discusses various methods used in cell biology including optical cytochemical biological biochemical and biophysical techniques It also examines the activities of cytoplasm and nucleus during interphase The final chapter describes various phases of the cell cycle the structure of metaphase chromosomes the molecular organization of the mitotic apparatus and the cytokinesis with emphasis on the main mitotic abnormalities With the aim of linking the morphology and biochemistry of the cell this book is intended for advanced students research workers biochemists and cytologists who wish to broaden their knowledge in cell **Molecular Cytology V2** Jean Brachet, 2012-12-02 Molecular Cytology Volume 2 Cell Interactions deals with the morphology and biochemistry of

the cell with emphasis on the more dynamic aspects of cytology It looks at gene transfer in somatic cells nucleocytoplasmic interactions in oocytes and eggs and cell differentiation transformation malignancy aging and death Organized into four chapters this volume begins with a discussion of nucleocytoplasmic interactions in somatic cells and unicellular organisms The next chapter examines the experimental interventions at early stages in the egg cytoplasm with reference to *Xenopus* oocytes as well as oogenesis the structure and composition of the cytoplasm and the nucleus fertilization of sea urchin eggs and the nuclear determinants of early embryogenic development Additionally a chapter explains the mechanisms underlying cell senescence arrest of cell growth and cell death the mechanisms of cell differentiation as the normal outcome of embryonic development the morphological and biochemical changes that occur in cells when they become senescent and the metastasis of cancer cells The book concludes with a chapter that presents a few general ideas about biochemical cytology This book is a valuable reference for cell biologists biochemists cytologists advanced students research workers and laypersons interested in learning the fundamentals of descriptive cytology biochemistry embryology genetics and molecular biology
