Bundesministerium für Wissenschaft und Forschung, 1975      Applied General Systems Research G. Klir, 2013-06-29 This volume consists of a selection of papers presented at the International Conference on Applied General Systems Research Recent Developments and Trends which was held on the campus of the State University of New York at Binghamton in August 15 19 1977 under the sponsorship of the Special Panel on Systems Science of the NATO Scientific Affairs Division General systems research is a fairly new field which has been developing in the course of the last two or three decades In my opinion it can be best described as a movement which involves the study of all structural and context independent aspects of problem solving As such it is cross disciplinary in nature and in this sense it might seem similar to mathematics There is a considerable difference however between the two While pure mathematics is basically oriented to the development of various axiomatic theories regardless of whether or not they have any real world meaning applied mathematics explores the applicability of some of these theories as potentially useful methodological tools in various problem areas General systems research in contrast with applied mathematics is problem oriented rather than tool oriented As such it tries to develop genuine methods for solving systems problems i.e. structural type and context independent problems The term genuine method is used here to refer to a method which adjusts to the problem rather than requiring that the problem be adjusted to make the method applicable
