Progress In Elementary Particle C Volume 8:

Scattering Theory of Waves and Particles R.G. Newton, 2013-11-27 Much progress has been made in scattering theory since the publication of the first edition of this book fifteen years ago and it is time to update it. Needless to say it was impossible to incorporate all areas of new development. Since among the newer books on scattering theory there are three excellent volumes that treat the subject from a much more abstract mathematical point of view Lax and Phillips on electromagnetic scattering Amrein Jauch and Sinha and Reed and Simon on quantum scattering I have refrained from adding material concerning the abundant new mathematical results on time dependent formulations of scattering theory. The only exception is Dollard's beautiful scattering into cones method that connects the physically intuitive and mathematically clean wave packet description to experimentally accessible scattering rates in a much more satisfactory manner than the older procedure. Areas that have been substantially augmented are the analysis of the three dimensional Schrodinger equation for non central potentials in Chapter 10 the general approach to multiparticle reaction theory in Chapter 16 the specific treatment of three particle scattering in Chapter 17 and inverse scattering in Chapter 20. The additions to Chapter 16 include an introduction to the two Hilbert space approach as well as a derivation of general scattering rate formulas. Chapter 17 now contains a survey of various approaches to the solution of three particle problems as well as a discussion of the Efimov effect.

Conscious Action Theory Wolfgang Baer, 2019-11-20 Conscious Action Theory provides a logical unification between the spirit and the material by identifying reality as an event that processes personal experiences into explanatory memories from which personal experiences are regenerated in a never ending cycle of activity. Baer explores the idea that our personal feelings are undeniable facts that have been systematically excluded from the basic sciences thereby leaving us with a schizophrenic division between objective materialism and spiritual idealism. Cognitive Action Theory CAT achieves this unification by recognizing that the observer's existence is the foundational premise underlying all scientific inquiry. It develops as an event oriented physical theory in which the first person observer is central. By analyzing the methods through which we human observers gain knowledge and create the belief systems within which our experiences are explained we discover a fundamental truth: all systems are observers and exhibit some form of internal awareness. Events not the objects appearing in them are the fundamental building blocks of reality. The book is comprised of three parts: the first addresses the paradigm shift from an object to an event oriented world view; the second develops the foundations of action physics for an event oriented world view; and the third provides examples of how these new ideas can be applied to move our knowledge up the next evolutionary step of human development. This book will benefit anyone questioning their role in the universe especially those in interdisciplinary fields of philosophy psychology neuroscience and medicine who seek understanding of quantum theory as the physics of conscious systems that know the world. *Progress in Physics, vol. 2/2010* Dmitri Rabounski, Florentin Smarandache, Larissa Borissova, Progress in Physics has been created for publications on advanced
