Cardiac Allograft Rejection G. William Dec,Manel Ballester,2001-09-30 Heart transplantation remains one of the major scientific achievements of twentieth century medicine During the past four decades it has evolved from an unproven

experimental surgical technique to the most effective form of therapy for refractory end stage heart disease It has captured the public s imagination and expanded our understanding of fundamental immunologic mechanisms that are responsible for cellular and humorally mediated immunity Despite its successes many clinical and scientific problems remain One or more bouts of acute cellular or humoral vascular rejection will occur in over 75% of transplant recipients despite current immunosuppressive strategies Further rejection directly results in approximately 20% of post transplant deaths and is believed to play a major role in the development of late allograft dysfunction and coronary vasculopathy This book by international experts in the fields of transplantation medicine immunobiology and cardiac imaging provides the reader with an up to date concise summary of the latest developments in the diagnosis and treatment of acute cardiac rejection It is axiomatic that a more complete understanding of the pathogenic processes involved in rejection will ultimately lead to its prevention This volume will be useful to transplant cardiologists cardiovascular surgeons cardiac pathologists and transplant scientists who seek to prolong the lifespan and improve the quality of life of their transplant recipients
