Progress In Optics Vol 22 Progress In Optics S:

Progress in Optics Emil Wolf, 2006-10-03 In the thirty seven years that have gone by since the first volume of Progress in Optics was published optics has become one of the most dynamic fields of science At the time of inception of this series the first lasers were only just becoming operational holography was in its infancy subjects such as fiber optics integrated optics and optoelectronics did not exist and quantum optics was the domain of only a few physicists The term photonics had not yet been coined Today these fields are flourishing and have become areas of specialisation for many science and engineering students and numerous research workers and engineers throughout the world Some of the advances in these fields have been recognized by awarding Nobel prizes to seven physicists in the last twenty years The volumes in this series which have appeared up to now contain nearly 190 review articles by distinguished research workers which have become permanent records for many important developments They have helped optical scientists and optical engineers to stay abreast of their fields There is no sign that developments in optics are slowing down or becoming less interesting Gaussian apodization and beam propagation Electromagnetically induced transparency Three dimensional electromagnetic fields Quantum cryptography Optical quantum cloning

Progress in Optics, 1993-12-13 Volume XXXII contains a number of review articles on recent developments in optics and related subjects The first article presents an account of guided wave optics on silicon which is a subject of considerable current interest in the broad field of integrated optics likely to influence the design and fabrication of various optical components Chapter two provides an overview of the optical implementation of neural networks and discusses their design models and architecture The following article deals with applications of the path integral technique to the theory of wave propagation in random media a technique used with considerable success in the last two decades for solutions of problems encountered in classical statistical wave theory Methods for obtaining information on the relative location of objects in space are considered in the following chapter and includes an analysis of the potential accuracy and reliability of object location in the presence of additive Gaussian noise and a discussion of optical filters for localization of objects under various circumstances The fifth article deals with the broad topic of radiation from uniformly moving sources It considers the Vavilov Cerenkov radiation the Doppler effect in media transition radiation and bremsstrahlung These phenomena are of particular importance in the electrodynamics of continuous media especially in a plasma In the concluding article nonlinear optical plasmas in atoms and weakly relativistic plasmas are considered The emphasis is on the specific properties of laser radiation that are important for inducing multiphoton processes and on nonlinear interactions of very intense laser pulses with electrons All the articles are written by leading authorities in their respective fields from all over the world

Photoelasticity Kozo Kawata, Masataka Nisida, 2012-12-06 Thirty five papers were presented at the International Symposium on Photoelasticity Tokyo 1986 representing fifty five authors Eighteen of these papers were presented by Japanese photoelasticians and seventeen by leading foreign authorities from eleven countries Austria Canada

Czechoslovakia F R of Germany France Greece India Switzerland UK USA and USSR This is the first symposium on photoelasticity of international scope held in Japan The primary objectives of this symposium are to help bridge the gap between photoelastic researchers around the world to promote mutual understanding and communications and to facilitate exchange of newly acquired knowledge in theories and techniques In addition it is important that these valuable results are communicated effectively to engineers who can apply them in practice in industry The papers presented at this symposium cover all branches of photo elasticity in a broad sense including in addition to long established photoelasticity newly developed moire interferometric and holographic photoelasticity caustics and speckle Therefore from an optical stress analysis perspective this volume is the latest comprehensive collection of photoelastic expertises

Progress in Atomic Spectroscopy W. Hanle, 2013-03-09 W HANLE and H KLEINPOPPEN In 1919 in the first edition of *Atombau und Spektrallinien* Sommerfeld referred to the immense amount of information which had been accumulated during the first period of 60 years of spectroscopic practice Sommerfeld emphasized that the names of Planck and Bohr would be connected forever with the efforts that had been made to understand the physics and the theory of spectral lines Another period of almost 60 years has elapsed since the first edition of Sommerfeld's famous monograph As the editors of this monograph *Progress in Atomic Spectroscopy* we feel that the present period is best characterized by the large variety of new spectroscopic methods that have been invented in the last decades Spectroscopy has always been involved in the field of research on atomic structure and the interaction of light and atoms The development of new spectroscopic methods i.e. new as compared to the traditional optical methods has led to many outstanding achievements which together with the increase of activity over the last decades appear as a kind of renaissance of atomic spectroscopy

Trends in Quantum Electronics A.M. Prokhorov, I. Ursu, 2013-03-09 The second International Conference on Trends in Quantum Electronics TQE 85 was held in Bucharest at the National Centre for Physics in September 1985 and brought together more than 350 scientists from 22 countries In accordance with the objectives established at the first conference which was held in 1982 in conjunction with the third International Summer School in Coherent Optics the second conference concentrated upon the central topics and chief directions of development in quantum

electronics which stands out as an area of science and technology that is currently expanding vigorously On the other hand it was also apparent that TQE 85 was primarily influenced by the worldwide celebration in 1985 of the 25th anniversary of the laser a moment of prime importance in the development of many frontline fields including communications chemistry biology health care and materials processing A special session was devoted to this anniversary In keeping with the dynamic spirit of the conference the fine quality of the invited lectures and the other contributions set a high scientific standard for the proceedings Mention should be made of the posters that were presented throughout the conference These together with the exhibition of books and journals and a display of specialized scientific equipment did much to create a framework for effective communication and stimulating interaction to the benefit of all the participants Of invaluable help in the preparation of the conference was the collaboration of the International Scientific Advisory Committee Analytical Chemistry Division Annual Progress Report for Period Ending ...
