

PROGRESS IN POWDER METALLURGY IN THE UNITED KINGDOM 1957-1967*

By IVOR JENKINS†

I.—INTRODUCTION

TODAY we are celebrating the Tenth Anniversary of the foundation of the Powder Metallurgy Joint Group, and the occasion would seem to be appropriate to remind ourselves of and to place on record, I believe for the first time, the events that led up to its formation.

The Iron and Steel Institute had taken the initiative in 1947 by organizing the first British Symposium on Powder Metallurgy and, in association with the Institute of Metals, repeated this in 1954 on a more comprehensive scale. Just before the latter symposium was held, an O.E.E.C. mission had visited the United States to survey developments in that country, and there can be no doubt that the close relationship then established with European representatives, as well as the stimulation afforded by the visit itself, set in train a vigorous campaign for an improvement in the learned society service to the industry. It is significant that of the fifty papers presented at the 1954 Symposium, twelve emanated from European countries. Promoted by the British representatives on the O.E.E.C. mission, and attended by large numbers of people from both within and outside the powder-metallurgy industry, meetings were held to discuss the mission's report and, among other things, it was concluded that there was a need in the United Kingdom for a more permanent organization to facilitate the study of the science, technology, and practice of powder metallurgy. Serious consideration was given to the creation of an independent society, but wisely—I am sure you will agree—representations were made to the respective Councils of the Iron and Steel Institute and the Institute of Metals; a joint working party was set up by them and its recommendation that the two Institutes should form a Joint Group for powder metallurgy was accepted. The Joint Committee then created held its first meeting in March 1957, and the Inaugural Meeting of the Group took place on 4 December of the same year.

* Tenth Anniversary Lecture delivered at a meeting of the Powder Metallurgy Joint Group in London on 15 November 1967.

George E. Totten,2002 Annotation Examines the factors that contribute to overall steel deformation problems The 27 articles address the effect of materials and processing the measurement and prediction of residual stress and distortion and residual stress formation in the shaping of materials during hardening processes and during manufacturing processes Some of the topics are the stability and relaxation behavior of macro and micro residual stresses stress determination in coatings the effects of process equipment design the application of metal thermo mechanic to quenching inducing compressive stresses through controlled shot peening and the origin and assessment of residual stresses during welding and brazing Annotation c Book News Inc Portland OR booknews com Progress in Powder Metallurgy ,1977 *Corrosion Tests and Standards*

Hausner,2012-12-06 Five years ago the worldwide powder metallurgy fraternity gathered in New York City to attend the first international conference devoted entirely to powder metal lurgy to take place in the United States It was a tentative venture entered into by the sponsors with no idea as to whether it would fail or succeed The only assurances we had were that the metal powder producing and consuming industries were rapidly expanding and that powder metallurgy was truly becoming one of the international sciences The 1960 Conference was successful not only in terms of attendance and interest but also in terms of knowledge gained The literature had been enriched by the contributions of its participants to foster and encourage this type of world wide exchange Thus another such conference was held in 1965 expanded in scope and supplemented by an exhibition of the latest advances in raw materials processing equipment and finished products of powder metallurgy On behalf of the Conference sponsors the Metal Powder Industries Federa tion the American Powder Metallurgy Institute and the Metallurgical Society of AIME I thank all those who participated and who helped make the 1965 Interna tional Powder Metallurgy Conference a rewarding experience and memorable event in our industry s history Support of the National Science Foundation which made it possible for several speakers from abroad to participate in the program is gratefully acknowledged **Nickel, Cobalt, and Their Alloys** Joseph R. Emerging Engineering Materials Mel Schwartz, 1996-03-21 From the Author s Preface The rapid advances in Materials Science and Engineering have convinced many that the design production and use of advanced materials will shape future manufacturing industries Competitive advantage within entire industries is shaped by the quality of the materials available to the manufacturers the early availability of a new material can be leveraged manyfold In addition advanced materials or advanced materials processing can signal the birth or death of entire industries and access to higher quality and lower cost material has permitted some countries to obtain market dominance in several key industries Much of the new strategy entails

harnessing the potential of innovative technology that is going back to the nano and molecular states of materials and new effective ways to create process and eventually use them Rather than being concerned with a relatively small number of generic materials each possessing a broad range of uses the materials sector is increasingly concerned with tailoring a growing list of ever more specialized materials for narrow niche applications New products with better growth prospects such as high performance alloys composites laminates and a variety of coatings have been emphasized Materials firms also have sought ways to overcome the weaknesses of ceramics and fully exploit their formidable strengths Functional materials that do more than support structures have been developed for use in sophisticated electronic optical magnetic and biotech applications This book will show what materials will be available in the next decade or two in addition to those currently available and their effect on material design start up and production processes **Energy Research Abstracts** ,1993
