Progress In The Astronautical Scien Volume 1:

Progress in Aeronautical Sciences D. Küchemann, P. Carrière, B. Etkin, 2016-10-13 Progress in Aeronautical Sciences Volume 10 provides information pertinent to the development in aeronautical sciences This book discusses a variety of topics including thermoelasticity turbulent boundary as well as the manufacturing methods reliability problem areas and applications under development in fluidic systems Organized into six chapters this volume begins with an overview of the theoretical problems of elasticity This text then discusses the state of research in the complex fields of turbulent boundary layers with fluid injections Other chapters consider as well the problems of supersonic flow past wings and bodies This book discusses as well the flow in hypersonic wakes in ionized gases The reader is also introduced to the possible applications of the compressible turbulent boundary layer with fluid injection The final chapter discusses the components used in fluidic systems which are described with emphasis on their general system of operation and general properties This book is a valuable resource for engineers
