

The Flo Health App and Technological Utopia

Topic: Health & Medicine | Words: 3134 | Pages: 13

Introduction

It is important to note that the concept of technological utopianism is a promising idea to strive for when it comes to solving many of humanity's problems. One of such global issues is women's health and wellbeing, which is highly complex and intricate in its nature. The fairly recent burst of technological progress opened new opportunities and innovations in regard to women's autonomy over their bodily functions, where many critical metrics can be tracked and monitored without the need for medical professionals. The given research analysis will primarily focus on the app named Flo, which is primarily used to monitor women's menstrual cycles with a wide range of additional functionalities to enhance the users' experience of being more informed and aware of their health.

The app provides a useful insight into how technological utopianism can manifest itself in specific domains, such as women's health. The core research question is how menstrual apps comfort and secure women and how it can be reflected by the technological utopian approach to women's health. Therefore, some women are already living in a technological utopia where menstrual apps can solve many of their health problems based on gathered data from active users. The Flo app is a manifestation of a technological utopia for women's health. The data tracking features of the software are not a violation of privacy but an enhancement of women's freedom to have fuller control over their bodies.
