Research in Progress at the University of Minnesota, July 1924-July 1925, 1926 *Subject Guide to Books in Print, 2001* **Opportunistic Infections** Vassil St. Georgiev, 2003-02-27 The major goal of Opportunistic Infections Treatment and Prophylaxis is to guide clinicians who provide care for patients suffering from an underlying immunodeficiency that may significantly weaken their immune defenses and will complicate the effective treatment of opportunistic infections In spite of a wealth of isolated data no single text exists in which all the essential information about various infectious opportunistic infections Although I make no claim to completeness it is my hope that the present book will fulfill that need To achieve this goal I have endeavored to integrate both results from large scale clinical trials and trials involving small numbers of patients as well as reports of single cases mindful that such an approach has its limitations Opportunistic Infections Treatment and Prophylaxis is organized into four major parts bacterial viral parasitic and fungal diseases affecting the immunocompromised population Each part surveys individual infections caused not only by well known etiologic agents but also by new and emerging species often taxonomically closely related to a major disease producing microorganism and until recently not considered to be human pathogens Candida spp and nontuberculous mycobacteria for example For the sake of uniformity within each part the species have been arranged according to their taxonomic characteristics
