## **Progress In Drug Research:**

Progress in Drug Research Ernst Jucker, 2001 Progress in Drug Research is a prestigious book series which provides extensive expert written reviews on a wide spectrum of highly topical areas in current pharmaceutical and pharmacological research. It serves as an important source of information for researchers concerned with drug research and all those who need to keep abreast of the many recent developments in the quest for new and better medicines. **Progress in drug research. 50.1998** Ernst Jucker, 1998 Progress in Drug Research is a prestigious book series founded in 1959 which provides extensive expert written reviews on a wide spectrum of highly topical areas in current pharmaceutical and pharmacological research. Each volume contains fully cross referencing indexes which link the volumes together forming a virtually encyclopaedic work. The series thus serves as an important time saving source of information for researchers concerned with drug research and all those who need to keep abreast of the many recent developments in the quest for new and better medicines. Volume 50 in the series includes: P N Kaul Drug discovery Past present and future M Rohmer Isoprenoid biosynthesis via the mevalonate independent route a novel target for antibacterial drugs G Edwards and A H Weston Endothelium derived hyperpolarizing factor a critical appraisal R W Rockhold Glutamate involvement in psychomotor stimulant action J M Colacino and K A Staschke The identification and development of antiviral agents for the treatment of chronic hepatitis B virus infection T D Johnson Polyamines and cerebral ischemia *Progress in Drug Research* Ernst Jucker, 2012-12-06 Nikolaus Seiler Benoit Duranton and Francis Raul The polyamine oxidase inactivator MDL 72527 Zhi Hong and Craig E Cameron Pleiotropic mechanisms of ribavirin antiviral activities Jie Hong Hu and Charles Krieger Protein phosphorylation networks in motor neuron death James O Schenk The functioning neuronal transporter for dopamine kinetic mechanisms and effects of amphetamines cocaine and methylphenidate Laszlo Prokai Central nervous system effects of thyrotropin releasing hormone and its analogues opportunities and perspectives for drug discovery and development David F Horrobin A new category of psychotropic drugs neuroactive lipids as exemplified by ethyl eicosapentaenoate E E Suprabhat Ray Reema Rastogi and Atul Kumar Current status of estrogen receptors **Progress in Drug Research** , 2012-12-06 Hepatitis C virus HCV was first identified in 1989 as the etiologic agent of non A non B hepatitis 1 and is currently recognized as the leading cause of chronic liver disease worldwide. In contrast to hepatitis B virus infection in which only about 5% of adult infections become chronic more than 80% of HCV infected patients develop chronic hepatitis. Moreover 20 50% of those persistently infected with HCV will develop liver cirrhosis and hepatocellular carcinoma HCC 2 It is estimated that there are 10 000 deaths in the USA per year due to chronic liver failure or HCC 3 In addition HCV is 25 50% of all liver transplants in US centers and the ease is responsible for recurrence of HCV infection following liver transplantation is universal 4 Typically HCV disease emerges after a 10 20 year period during which symptoms if they exist at all are mild and non specific. Although the prevalence varies greatly among different countries it has been estimated that up to 170 million

people 3% of the world's population are infected with HCV. A recent study in the USA found that 65% of all HCV infected persons are 30 to 49 years old.

**Progress in Drug Research/Fortschritte der Arzneimittelforschung/Progrès des recherches pharmaceutiques** JUCKER, 1976-01-01 Volumes 18 and 19 of Progress in Drug Research differed from the earlier volumes insofar as they were concerned almost exclusively with problems in the field of Tropical Medicine. The editor and publishers believed that in this way some contribution could be made to the solution of some of the many problems with which the developing countries are burdened. The 20th volume however is in the customary form; it contains 17 contributions from various areas of drug research and therapy. Whereas the articles concentrate on a short representation of the progress which has already been made, nevertheless reference is also made to the many unsolved problems within the particular areas. The editor hopes that the 20th volume will not only represent a comprehensive review but will also be of some use in focusing further investigations on problems of medicine that have still not been overcome. The editor would also like to take this opportunity of expressing his gratitude to Dr A. Naffor carefully working over the manuscripts and correcting proofs. Thanks are also due to the publishers and the printers Druckerei Birkhauser especially Dr A. Birkhauser, Th. Birkhauser and C. Einsele for their painstaking work on the printing and lay out of the volume. August 1976 Dr E. JUCKER, Sandoz AG, Basel.

**Vorwort** Die Bände 18 und 19 der Fortschritte der Arzneimittelforschung wichen insofern von den vorhergehenden Bänden ab als sie fast ausschliesslich Probleme der Tropenkrankheiten behandelten.

Hypertension is one of the cardiovascular diseases which is most common throughout the world. It is generally defined as an elevation of systolic and/or diastolic arterial blood pressure which is 120/80 mm Hg in normal situation. A value of 140/90 mm is generally accepted as the upper limit of normotension. Hypertension with certain risk factors such as hypercholesterolemia, diabetes, smoking, and a family history of vascular disease predisposes to arteriosclerosis and consequent cardiovascular morbidity and mortality. The treatment of hypertension leads to reduced risk of hypertensive renal failure, haemorrhagic stroke, myocardial infarction, and cardiac failure. In most cases the cause of the hypertension can not be clearly defined. Such hypertension is termed as essential hypertension. In a few cases 5-15% the hypertension is secondary to definable causes such as renal artery stenosis, a pheochromocytoma, or an endocrine disorder. This type of hypertension is known as secondary hypertension. Although the exact etiology of essential hypertension is still not well known, the following factors are supposed to play causative roles.
