Gordon, 2013-03-08 The food analyst plays an important role in modern society

Stricter control over additives in food and concern about the effects of contamination of food by industrial and agricultural chemicals are among the developments which are leading to an increasing emphasis on detailed and accurate analysis of food. However, analysis of food is required for many reasons including detection of toxic components, monitoring legislation, detecting adulteration, formulation of controlled diets, controlling formulation during product development, and detecting changes in food during storage and processing. Foods comprise a complex mixture of components and food analysis requires efficient methods of separation with high sensitivity or specificity of detection. Although many food components are involatile or thermally labile and therefore not suitable for analysis by gas chromatography, other components are volatile and this technique is the preferred analytical method. Developments in methods of derivatization, injector design, and column technology have also extended the applicability of gas chromatography to the analysis of relatively involatile compounds.

GC/LC, Instruments, Derivatives in Identifying Pollutants and Unknowns Raymond C. Crippen, 2013-10-22 GC/LC

Instruments, Derivatives in Identifying Pollutants and Unknowns outlines the methods of identifying various components in products, processes, or discharges to the environment. This book is composed of 14 chapters that demonstrate the utility of gas and liquid chromatographs in the analysis of unknown organic compounds. The opening chapters deal with the isolation and the preparation of derivatives of various pollutants. Considerable chapters are devoted to the analysis and detection of various organic group compounds including derivatives of acetals, acetates, acids, acid halides, ethers, amines, amino acids, anilides, barbiturates, benzamides, esters, and hydrocarbons. Other chapters cover other group compounds such as derivatives of oxalates, oximes, peroxides, phenyl semicarbazones, silicones, sulfur, toluidides, trihalo acids, and alcohols. The closing chapters describe the identification techniques and instrumentation of pollutant detection. These chapters highlight the utilization of GC/LC data in physicochemical measurements of various organic pollutants. This book will prove useful to analytical and organic chemists, environmental scientists, and researchers.
