Progress In Medical Radiation Physics:

Progress in Medical Radiation Physics Colin G. Orton, 2013-11-11 The Progress in Medical Radiation Physics series presents in depth reviews of many of the significant developments resulting from the application of physics to medicine This series is intended to span the gap between research papers published in scientific journals which tend to lack details and complete textbooks or theses which are usually far more detailed than necessary to provide a working knowledge of the subject Each chapter in this series is designed to provide just enough information to enable readers to both fully understand the development described and apply the technique or concept if they so desire Thorough references are provided for those who wish to consider the original literature In this way it is hoped that the Progress in Medical Radiation Physics series will be a catalyst encouraging medical physicists to apply new techniques and developments in their daily practice Colin G Orton ix Contents 1 1 The Tracking Cobalt Project From Moving Beam Therapy to Three Dimensional Programmed Irradiation W A Jennings 1 Introduction 2 Establishing Moving Beam Techniques at the Royal Northern Hospital 1945 1955 4 2 1 Alternative Moving Beam Techniques 4 2 2

Orton, 2014-01-15 **Progress in Medical Radiation Physics** Colin Orton, 2014-01-15 **Progress in Medical Radiation Physics** Colin Orton, 2013-06-29 New developments in the application of radiation to medicine are occurring so rapidly that this is possibly the fastest growing branch of medicine today In the past decade alone we have seen enormous progress made in techniques used both for the diagnosis of disease such as computerized tomography digital radiography ultrasonography computerized nuclear medicine scanning and nuclear magnetic resonance imaging and for its treatment such as the radiotherapeutic utilization of high LET radiations and the widespread application of computers to perform elegant dosimetry calculations for 3 D treatment planning and imaging This series will provide in depth reviews of the many spectacular technical advances and sophisticated concepts which are developing in medical radiation physics at such an alarming rate that it has become increasingly difficult to keep one's knowledge up to date These comprehensive review articles will help to bridge the communications gap between the international research community and the medical physicists and physicians whose responsibility it is to put these advances into clinical use These articles should also be of value to the increasing number of physical scientists and engineers who are interested in the application of their knowledge and talents to the field of medicine

Meyer, Peter Schweizer, R. Erbel, 2012-12-06 Many noninvasive examination methods of the heart have not held out against the invasive methods which modern cardiac therapy surgically or with

catheterization requires They have disappeared completely or are only used by isolated groups of researchers However there is an obvious tendency to apply the invasive procedures as the last diagnostic possibility In the attempt to select clinically relevant methods the expert authors of this book demonstrate that echocardiography expanded with contrast and Doppler has been developed into one of the most important noninvasive methods The results with tissue characterization show that the possibilities of this method have not yet been fully explored Nuclear procedures are widely used although they should only be applied in direct connection with clinical cardiology The new lead methods of the ecg such as ecg mapping show that standard electrocardiography of electrical functions is not yet fully exploited The rapidly developing method of computer tomography is also being applied to cardiology Since nuclear magnetic resonance requires extensive equipment construction its future is as yet unsure Of course a book like this does not intend to treat the subject of noninvasive cardiology in extensive detail Established methods like standard electrocardiography phonocardiography and sphygmography are not discussed The aim of this book is rather to demonstrate the trend of present developments in the field
