Progress in Nucleic Acid Research and Molecular Biology, 1975-06-16 Progress in Nucleic Acid Research and Molecular Biology **Catalog of Copyright Entries. Third Series** Library of Congress. Copyright Office, 1975 *Biochemistry of Brain* Sudhir Kumar, 2013-10-22 Biochemistry of Brain is a collection of articles dealing with the developments in the biochemistry of the brain This book gives a comprehensive and critical discussion of important developments in studies concerning the above subject This text discusses the structure function and metabolism of glycosphingolipids which are related to the study of sphingolipid storage diseases Inborn defects of metabolism are found in Gaucher s and Fabry s disease which are characterized by lipid accumulation in the brain Another paper reviews the chemical and genetics of critically lysosomal hydrolase deficiencies that can cause the storage of sphingolipids This book then explains the role of myelin basic protein in lipids in vivo that the weak bonding of the protein is not a major component of myelin stability Another paper discusses the procedures for isolating subfractions of myelin and myelin related membranes with some attention given on the alterations in the subfractionation of myelin in pathological hypomyelinating and demyelinating conditions Another article discusses the biochemical and enzymatic composition of lysosomes and the biosynthesis intracellular transport storage and the degradation of lysosomal constituents This collection of papers will benefit scientists doing research in microbiology microchemistry molecular genetics and neurochemistry **Trends in Synthetic Carbohydrate Chemistry** American Chemical Society. Meeting, 1989 **The Regulation of DNA Replication and Transcription** Mirko Beljanski, 2013-03-26 The Regulation of DNA Replication and Transcription explores basic processes of DNA replication and transcription in an effort to identify the mechanisms responsible for the release of genetic information and its role in the regulation of cellular events Concerned with discovering the fundamental concept that might integrate and explain the wide range of existing lines of evidence the author reports and interprets the results of experiments conducted in an impressive range of biological systems Focused on complex mechanisms at the biochemical level these studies allow analysis of the pathways involved when cells organs and animal systems react to various trigger molecules derived from both living cells and exogenous sources These include hormones RNA RNA fragments alkaloids actinomycin D and phorbol esters as well as chemical carcinogens and drugs Combining the results of these studies with his own extensive work in this field the author is able to formulate a uniquely integrative biochemical model for the gene expression demonstrating that both biological and chemically synthesized molecules can trigger the differential release of information from the DNA and thus influence cell transformation Apart from its academic significance the model offers high potential assistance in the search for ways to induce or control the expression of certain genes and moreover to promote differentiation of given cells in vitro as well as in situ The Publishers' Trade List Annual, 1985 **Biosynthesis** John W. Corcoran, 2012-12-06 The Series on Antibiotics produced by Springer Verlag began more than a decade ago with the nearly simultaneous appearance of two volumes one dealing with the

mode of action of antibiotics and the other concerning the biosynthesis of them The standards set by the original Editors were high and these books have proved useful to many The rapid advances in our knowledge of the mode of action of antibiotics and other antitumor agents has stimulated two further works in the same series Volume III 1975 and Volumes Vj1 and Vj2 1979 For some time it had appeared to Dr Konrad Springer that the time might be ripe for bringing the subject of the biosynthesis of antibiotics up to date This Editor agreed to survey the literature and discuss this possibility with his colleagues who are active in research on antibiotics In spite of the appearance of numerous review articles both of a highly specialized and general nature on the biosynthesis of antibiotics it was agreed generally that it would be extremely useful to add a new volume on biosynthesis to the Series Such a work should focus on collecting a group of contributions dealing with those antibiotics whose biosynthesis is understood in much greater detail now than it was in the middle 1960 s Since Volume II on biosynthesis continues to be available this addition to the series has not dealt with each and every antibiotic whose biosynthesis was studied long ago

Molecular Machines in Biology Joachim Frank, 2011-12-19 The concept of molecular machines in biology has transformed the medical field in a profound way Many essential processes that occur in the cell including transcription translation protein folding and protein degradation are all carried out by molecular machines This volume focuses on important molecular machines whose architecture is known and whose functional principles have been established by tools of biophysical imaging X ray crystallography and cryo electron microscopy and fluorescence probing single molecule FRET This edited volume includes contributions from prominent scientists and researchers who understand and have explored the structure and functions of these machines This book is essential for students and professionals in the medical field who want to learn more about molecular machines

Metabolic Turnover in the Nervous System Sidney Roberts, P. Greengard, J. M. Ritchie, Michael M. Brand, G. M. Lehrer, Margaret R. Murray, N. Marks, A. Lajtha, R. Rodnight, Paul Mandel, Monique Jacob, Robert Main Burton, Yasuzo Tsukada, Hrachia Chachatur Buniatian, Sze-Chuh Cheng, 2013-03-09 Volume V deals with the problems of turnover in the nervous system Turnover is defined in different ways and the term is used in different contexts It is used rather broadly in the present volume and intentionally so The turnover of macromolecules is only one aspect here turnover indicates the simultaneous and coordinated formation and breakdown of macromolecular species The complexities of cerebral protein turnover are shown in a separate chapter dealing with the synthesis of proteins in another on breakdown and in still another on the relationship of these two showing how the two halves of turnover are controlled The fact that most likely the two halves of protein turnover synthesis and breakdown are separated spatially and the mechanisms involved are different further emphasizes the complexity of macromolecular turnover Turnover is used in a different context when the turnover of a cycle is discussed but here again a number of complex metabolic reactions have to be interrelated and controlled some such cycles are discussed briefly in this volume additional cycles have been discussed with metabolism and some cycles still await elucidation or discovery

Biological Regulation

and Development Robert Goldberger, 2012-12-06 The motivation for us to produce a treatise on regulation was mainly our conviction that it would be fun and at the same time productive to approach the subject in a way that differs from that of other treatises We had ourselves written reviews for various volumes over the years most of them bringing together all possible facts relevant to a particular operon virus or biosynthetic system And we were not convinced of the value of such reviews for anyone but the expert in the field reviewed We thought it might be more interesting and more instructive for both author and reader to avoid reviewing topics that anyone scientist might work on but instead to review the various parts of what many different scientists work on Cutting across the traditional boundaries that have separated the subjects in past volumes on regulation is not an easy thing to do not because it is difficult to think of what interesting topics should replace the old ones but because it is difficult to find authors who possess sufficient breadth of knowledge and who are willing to write about areas outside those pursued in their own laboratories For example no one scientist works on suppression per se He may study the structure of suppressor tRNAs in Escherichia coli he may study phenotypic suppression of various characters in drosophila he may study polarity in gene expression and so on Cancer Chemotherapy Reports ,1968

Papers Published in Journals and Presented at Meetings, Reports Issued and Theses Completed, by ORNL Staff Members Oak Ridge National Laboratory, 1968 Biological Applications of Magnetic Resonance R Shulman, 2012-12-02 Biological Applications of Magnetic Resonance discusses various applications of magnetic resonance techniques The book's opening chapter examines the exchange behavior of the hydrogen bonded protons and its influence on their nuclear magnetic resonance NMR spectra This is followed by separate chapters dealing with NMR studies of nucleic acid and drug nucleic acid complexes Aspects of the basic theory of the nuclear Overhauser effect NOE are presented along with applications of NOEs observed for protons in biomolecules Subsequent chapters cover specialized EPR techniques that have been applied to biological problems the use of physical methods to refine a model of the combining site of the Fv fragment of protein 315 and the utility of model compounds in the analysis of hemoprotein NMR spectra The remaining chapters discuss serine proteinases that have been investigated by nuclear magnetic resonance spectroscopy the use of NMR in the study of intact living tissue and organs and ³¹P and ¹³C NMR studies of E coli cells *Revue roumaine de biochimie* ,1968 OTS. Heimer, 2021-05-30 The area of polyamines is presented in this useful two volume publication Basic information describing the role of polyamines in the processes of growth and differentiation is given Also included are data on the regulation of polyamine biosynthesis and metabolism and their interactions with nucleic acids Several chapters are devoted to the role of polyamines in various aspects of plant biology with a special emphasis on their participation in the response of plants to extreme environments Special attention is given to the use of inhibitors of polyamine biosynthesis as potential antitumor and antiproliferative agents Additionally progress in the

molecular biology and genetic engineering of genes coding for polyamine biosynthetic enzymes is described Cancer researchers biologists geneticists biochemists physiologists and clinicians will find this volume indispensable **Current Topics in Microbiology and Immunology / Ergebnisse der Mikrobiologie und Immunitätsforschung** W.
