## **Progress In Optics Volume 31 Volume Xxxi:**

**Progress in Optics**, 1993-05-10 A collection of comprehensive reviews in the field of optics The first article presents a review of recent investigations concerning multiphoton ionization of atoms in intense radiation fields and includes discussions on above threshold ionization generation of higher order harmonics of an intense field interacting with a gaseous medium and the role of chaotic dynamics in the interaction of atoms with monochromatic radiation A tutorial section on chaotic behaviour is also included The second article presents a review of modern developments regarding properties of light diffracted by gratings Both a phenomenological treatment and a macroscopic analysis are presented The following article reviews developments relating to optical amplifiers especially those which use semiconductors and optical fibres The article covers the operating principles fabrication and performance characteristics The next article reviews recent research on a promising new class of neural networks the so called adaptive multilayer optical networks Although still in the early states of developments these devices offer the possibility of implementing optical interconnections in three dimensions and they can be functionally equivalent to several thousand chips The fifth article deals with idealized but rather useful models of some atomic systems namely two level and four level atoms The analogy between a quantum two level atom and a classical model consisting of two coupled optical modes is discussed Extension of these considerations to optical band structure and to four level systems is also treated The concluding article deals thoroughly with free electron lasers in a physical way while minimum attention is paid to organic generalities and mathematical rigour

**Progress in Optics** Emil Wolf, 1961 Progress in Optics Volume 40 **Slow Light** Jacob B. Khurgin, Rodney S. Tucker, 2018-10-08 One of the Top Selling Physics Books according to YBP Library Services

The exotic effects of slow light have been widely observed in the laboratory However current literature fails to explore the wider field of slow light in photonic structures and optical fibers Reflecting recent research *Slow Light Science and Applications* presents a comprehensive introduction to slow light and its potential applications including storage switching DOD applications and nonlinear optics The book covers fundamentals of slow light in various media including atomic media semiconductors fibers and photonic structures Leading authorities in such diverse fields as atomic vapor spectroscopy fiber amplifiers and integrated optics provide an interdisciplinary perspective They uncover potential applications in both linear and nonlinear optics While it is impossible to account for all the captivating developments that have occurred in the last few years this book provides an exceptional survey of the current state of the slow light field

**Optical Waveguide Sensing and Imaging** Wojtek J. Bock, Israel Gannot, Stoyan Tanev, 2007-12-14 The book explores various aspects of existing and emerging fiber and waveguide optics sensing and imaging technologies including recent advances in nanobiophotonics The focus is both on fundamental and applied research as well as on applications in civil engineering biomedical sciences environment security and defence The book aims to provide a reference of state of the art overviews covering a variety of topics on the interface of engineering and biomedical sciences *Journal*
