Prolegomena To A Middlebrow Arithmetic Of Curves Of Genus 2:

Prolegomena to a Middlebrow Arithmetic of Curves of Genus 2 J. W. S. Cassels, E. V. Flynn, 1996-04-18 A unique insight into the topic of curves of genus 2 by two of the world's leading practitioners

Integrable Systems and Algebraic Geometry: Volume 2 Ron Donagi, Tony Shaska, 2020-04-02 Created as a celebration of mathematical pioneer Emma Previato this comprehensive book highlights the connections between algebraic geometry and integrable systems differential equations mathematical physics and many other areas The authors many of whom have been at the forefront of research into these topics for the last decades have all been influenced by Previato's research as her collaborators students or colleagues The diverse articles in the book demonstrate the wide scope of Previato's work and the inclusion of several survey and introductory articles makes the text accessible to graduate students and non experts as well as researchers The articles in this second volume discuss areas related to algebraic geometry emphasizing the connections of this central subject to integrable systems arithmetic geometry Riemann surfaces coding theory and lattice theory

Moduli Spaces and Vector Bundles Steve Bradlow, 2009-05-21 Coverage includes foundational material as well as current research authored by top specialists within their fields

Surveys in Combinatorics 2003 C. D. Wensley, 2003-07-24 The British Combinatorial Conference is held every two years and is a key event for mathematicians worldwide working in combinatorics In June 2003 the conference was held at the University of Wales Bangor The papers contained here are surveys contributed by the invited speakers and are of the high quality that befits the event There is also a tribute to Bill Tutte who had a long standing association with the BCC The papers cover topics currently attracting significant research interest as well as some less traditional areas such as the combinatorics of protecting digital content They will form an excellent resource for established researchers as well as graduate students who will find much here to inspire future work

Theory of P-adic Distributions S. Albeverio, V. M. Shelkovich, 2010-03-18 A wide ranging 2010 survey of new and important topics in p adic analysis for researchers and graduate students

Noncommutative Localization in Algebra and Topology Andrew Ranicki, 2006-02-09 Noncommutative localization is a powerful algebraic technique for constructing new rings by inverting elements matrices and more generally morphisms of modules Originally conceived by algebraists notably P M Cohn it is now an important tool not only in pure algebra but also in the topology of non simply connected spaces algebraic geometry and noncommutative geometry This volume consists of 9 articles on noncommutative localization in algebra and topology by J A Beachy P M Cohn W G Dwyer P A Linnell A Neeman A A Ranicki H Reich D Sheiham and Z Skoda The articles include basic definitions surveys historical background and applications as well as presenting new results The book is an introduction to the subject an account of the state of the art and also provides many references for further material It is suitable for graduate students and more advanced researchers in both algebra and topology

Smoothness, Regularity and Complete Intersection Javier Majadas, Antonio G. Rodicio, 2010-05-06 Written to complement standard texts on

commutative algebra this short book gives complete and relatively easy proofs of important results including the standard results involving localisation of formal smoothness M Andr and localisation of complete intersections L Avramov some important results of D Popescu and Andr on regular homomorphisms and some results from A Grothendieck's EGA on smooth homomorphisms The authors make extensive use of the Andr Quillen homology of commutative algebras but only up to dimension 2 which is easy to construct and they deliberately avoid using simplicial methods The book also serves as an accessible introduction to some advanced topics and techniques The only prerequisites are a basic course in commutative algebra and the first definitions in homological algebra

Geometry of Riemann Surfaces William J. Harvey, Frederick P. Gardiner, Gabino González-Diez, Christos Kourouniotis, 2010-02-11 Original research and expert surveys on Riemann surfaces

Geometric and Cohomological Methods in Group Theory Martin R. Bridson, 2009-10-29 An extended tour through a selection of the most important trends in modern geometric group theory

Partial Differential Equations and Fluid Mechanics James C. Robinson, 2009-07-16 Recent years have seen considerable research activity at the interface of mathematics and fluid mechanics particularly partial differential equations The 2007 workshop at the University of Warwick was organised to consolidate survey and further advance the subject This volume is an outgrowth of that workshop It consists of a number of reviews and a selection of more traditional research articles The result is an accessible summary of a wide range of active research topics written by leaders in their field together with some exciting new results The book serves as both a helpful overview for graduate students new to the area and a useful resource for more established researchers

Zariski Geometries Boris Zilber, 2010-02-04 This book presents methods and results from the theory of Zariski structures and discusses their applications in geometry as well as various other mathematical fields Its logical approach helps us understand why algebraic geometry is so fundamental throughout mathematics and why the extension to noncommutative geometry which has been forced by recent developments in quantum physics is both natural and necessary Beginning with a crash course in model theory this book will suit not only model theorists but also readers with a more classical geometric background

Singularities and Computer Algebra Christoph Lossen, Gerhard Pfister, 2006-04-06 A collection of articles giving overviews and open questions in singularities and their computational aspects

Elliptic Cohomology Charles B. Thomas, 2006-04-11 Elliptic cohomology is an extremely beautiful theory with both geometric and arithmetic aspects The former is explained by the fact that the theory is a quotient of oriented cobordism localised away from 2 the latter by the fact that the coefficients coincide with a ring of modular forms The aim of the book is to construct this cohomology theory and evaluate it on classifying spaces BG of finite groups G This class of spaces is important since using ideas borrowed from Monstrous Moonshine it is possible to give a bundle theoretic definition of EU BG Concluding chapters also discuss variants generalisations and potential applications

Spectral Asymptotics in the Semi-Classical Limit Mouez Dimassi, J. Sjostrand, 1999-09-16 Semiclassical approximation addresses the important relationship between quantum

and classical mechanics There has been a very strong development in the mathematical theory mainly thanks to methods of microlocal analysis This book develops the basic methods including the WKB method stationary phase and pseudodifferential operators The applications include results on the tunnel effect the asymptotics of eigenvalues in relation to classical trajectories and normal forms plus slow perturbations of periodic Schrödinger operators appearing in solid state physics No previous specialized knowledge in quantum mechanics or microlocal analysis is assumed and only general facts about spectral theory in Hilbert space distributions Fourier transforms and some differential geometry belong to the prerequisites This book is addressed to researchers and graduate students in mathematical analysis as well as physicists who are interested in rigorous results A fairly large fraction can be and has been covered in a one semester course

Surveys in Combinatorics, 2001 James William Peter Hirschfeld, 2001 The British Combinatorial Conference is held every two years and is now a key event for mathematicians worldwide working in combinatorics This volume is published on the occasion of the 18th meeting which was held 1st 6th July 2001 at the University of Sussex The papers contained here are surveys contributed by the invited speakers and are thus of a quality befitting the event There is also a tribute to Crispin Nash Williams past chairman of the British Combinatorial Committee The diversity of the subjects covered means that this will be a valuable reference for researchers in combinatorics However graduate students will also find much here that could be of use for stimulating future research

Conformal Fractals Feliks Przytycki, Mariusz Urbański, 2010-05-06 A one stop introduction to the methods of ergodic theory applied to holomorphic iteration that is ideal for graduate courses

Character Theory for the Odd Order Theorem Thomas Peterfalvi, 2000-02-28 The famous and important theorem of W Feit and J G Thompson states that every group of odd order is solvable and the proof of this has roughly two parts The first part appeared in Bender and Glauberman's Local Analysis for the Odd Order Theorem which was number 188 in this series This book provides the character theoretic second part and thus completes the proof All researchers in group theory should have a copy of this book in their library

Singular Perturbations of Differential Operators Sergio Albeverio, P. Kurasov, 2000-03-13 Differential and more general self adjoint operators involving singular interactions arise naturally in a range of topics such as classical and quantum physics chemistry and electronics This book presents a systematic mathematical study of these operators with particular emphasis on spectral and scattering problems Suitable for researchers in analysis or mathematical physics this book could also be used as a text for an advanced course on the applications of analysis

Permutation Patterns Steve Linton, Nik Ruškuc, Vincent Vatter, 2010-06-03 The study of permutation patterns is a thriving area of combinatorics that relates to many other areas of mathematics including graph theory enumerative combinatorics model theory the theory of automata and languages and bioinformatics Arising from the Fifth International Conference on Permutation Patterns held in St Andrews in June 2007 this volume contains a mixture of survey and research articles by leading experts and includes the two invited speakers Martin Klazar and Mike Atkinson Together the collected

articles cover all the significant strands of current research structural methods and simple patterns generalisations of patterns various enumerative aspects machines and networks packing and more Specialists in this area and other researchers in combinatorics and related fields will find much of interest in this book In addition the volume provides plenty of material accessible to advanced undergraduates and is a suitable reference for projects and dissertations Differential Tensor Algebras and Their Module Categories R. Bautista,L. Salmerón,R. Zuazua,2009-09-17 A detailed account of main results in the theory of differential tensor algebras
