Prolog A Logical Approach:

Prolog Anthony Dodd,1990 **The Logical Approach to Syntax** Edward P. Stabler,1992 By formalizing recent syntactic theories for natural languages Stabler shows how their complexity can be handled without guesswork or oversimplification By formalizing recent syntactic theories for natural languages in the tradition of Chomsky's Barriers Stabler shows how their complexity can be handled without guesswork or oversimplification He introduces logical representations of these theories together with special deductive techniques for exploring their consequences that will provide linguists with a valuable tool for deriving and testing theoretical predictions and for experimenting with alternative formulations of grammatical principles Stabler's novel approach allows results to be deduced with straightforward calculations and provides a systematic framework for tackling the problem of how speakers can infer the properties of an utterance from principles of the grammar The special treatment of equality induction principles and inclusion of a general method for collecting structures from proofs means that sophisticated linguistic arguments can be carried out in detail giving a rich perspective to issues in linguistic theory and parsing **Logic Programming** Sandro Etalle,Miroslav Truszczynski,2006-08-03 This book constitutes the refereed proceedings of the 22nd International Conference on Logic Programming ICLP 2006 held in Seattle WA USA in August 2006 This volume presents 20 revised full papers and 6 application papers together with 2 invited talks 2 tutorials and special interest papers as well as 17 poster presentations and the abstracts of 7 doctoral consortium articles Coverage includes all issues of current research in logic programming

Knowledge Systems and Prolog Adrian Walker,1987 Knowledge systems principles and practice A Prolog to Prolog Programming techniques in prolog Expert systems in prolog Natural language processing in prolog Conclusions Appendices Index Logic Programming Peter J. Stuckey,2002-07-17 The global environment is changing rapidly under the impact of human activities An important element in this change is related to global climate modification Experts from the natural and social sciences with a strong interest in history discussed common topics of great interest to society Can the study of climate and history help in devising strategies for coping with this change What might be the type of information most useful in this context What are the pitfalls awaiting the unwary These and similar questions were discussed during a four day workshop The resulting proceedings contain comprehensive papers of broad interest thematic back ground papers and reports of study groups Apart from scientists the papers should interest graduate students and lecturers Logic for Applications Anil Nerode,Richard A. Shore,2012-12-06 In writing this book our goal was to produce a text suitable for a first course in mathematical logic more attuned than the traditional textbooks to the recent dramatic growth in the applications of logic to computer science Thus our choice of topics has been heavily influenced by such applications Of course we cover the basic traditional topics syntax semantics soundness completeness and compactness as well as a few more advanced results such as the theorems of Skolem Lowenheim and Herbrand Much of our book however deals with other less traditional topics

Resolution theorem proving plays a major role in our treatment of logic especially in its application to Logic Programming and PROLOG We deal extensively with the mathematical foundations of all three of these subjects In addition we include two chapters on nonclassical logic modal and intuitionistic that are becoming increasingly important in computer science We develop the basic material on the syntax and semantics via Kripke frames for each of these logics In both cases our approach to formal proofs soundness and completeness uses modifications of the same tableau method introduced for classical logic We indicate how it can easily be adapted to various other special types of modal logics A number of more advanced topics including nonmonotonic logic are also briefly introduced both in the nonclassical logic chapters and in the material on Logic Programming and PROLOG

The Logic of Adaptive Behavior Martijn van Otterloo, 2009 Markov decision processes have become the de facto standard in modeling and solving sequential decision making problems under uncertainty This book studies lifting Markov decision processes reinforcement learning and dynamic programming to the first order or relational setting

Knowledge Representation, Reasoning, and the Design of Intelligent Agents Michael Gelfond, Yulia Kahl, 2014-03-10 Knowledge representation and reasoning is the foundation of artificial intelligence declarative programming and the design of knowledge intensive software systems capable of performing intelligent tasks Using logical and probabilistic formalisms based on answer set programming ASP and action languages this book shows how knowledge intensive systems can be given knowledge about the world and how it can be used to solve non trivial computational problems The authors maintain a balance between mathematical analysis and practical design of intelligent agents All the concepts such as answering queries planning diagnostics and probabilistic reasoning are illustrated by programs of ASP The text can be used for AI related undergraduate and graduate classes and by researchers who would like to learn more about ASP and knowledge representation

Extensions of Logic Programming Peter Schroeder-Heister, 1991-02-12 This volume contains finalized versions of papers presented at an international workshop on extensions of logic programming held at the Seminar for Natural Language Systems at the University of Tübingen in December 1989 Several recent extensions of definite Horn clause programming especially those with a proof theoretic background have much in common One common thread is a new emphasis on hypothetical reasoning which is typically inspired by Gentzen style sequent or natural deduction systems This is not only of theoretical significance but also bears upon computational issues It was one purpose of the workshop to bring some of these recent developments together The volume covers topics such as the languages Lambda Prolog N Prolog and GCLA the relationship between logic programming and functional programming and the relationship between extensions of logic programming and automated theorem proving It contains the results of the first conference concentrating on proof theoretic approaches to logic programming

Logic Programming David S. Warren, 1993 The Tenth International Conference on Logic Programming sponsored by the Association for Logic Programming is a major forum for presentations of research applications and implementations in this important area of computer science Logic programming is one of the most

promising steps toward declarative programming and forms the theoretical basis of the programming language Prolog and its various extensions Logic programming is also fundamental to work in artificial intelligence where it has been used for nonmonotonic and commonsense reasoning expert systems implementation deductive databases and applications such as computer aided manufacturing David S Warren is Professor of Computer Science at the State University of New York Stony Brook Topics covered Theory and Foundations Programming Methodologies and Tools Meta and Higher order Programming Parallelism Concurrency Deductive Databases Implementations and Architectures Applications Artificial Intelligence Constraints Partial Deduction Bottom Up Evaluation Compilation Techniques **Logic, Sets, and Recursion** Robert L. Causey, 2006 The new Second Edition incorporates a wealth of exercise sets allowing students to test themselves and review important topics discussed throughout the text Jacket The Logic Programming Paradigm Krzysztof R. Apt, Victor W. Marek, Mirek Truszczyński, David S. Warren, 2012-12-06 Logic Programming was founded 25 years ago This exciting new text reveals both the evolution of this programming paradigm since its inception and the impressively broad scope of current research in Logic Programming The contributions to the book deal with both theoretical and practical issues They address such diverse topics as computational molecular biology machine learning mobile computing multi agent systems planning numerical computing and dynamical systems database systems an alternative to the formulas as types approach program semantics and analysis and natural language processing The contributors are all leading world experts in Logic Programming and their contributions were all invited and refereed Between Mind And Computer: Fuzzy Science And Engineering Pei Zhuang Wang, Kia Fock Loe, 1994-01-24 The Fuzzy Explosion emanating from Japan has compelled more people than ever to ponder the meaning and potential of fuzzy engineering Scientists all over are now beginning to harness the power of fuzzy recognition and decision making reminiscent of the way the human mind works in computer applications In this book a blue ribbon list of contributors discusses the latest developments in topics such as possibility logic programming truth valued flow inference fuzzy neural logic networks and default knowledge representation This volume is the first in a series aiming to document advances in fuzzy set theory and its applications Thinking as Computation Hector J. Levesque, 2017-08-11 Students explore the idea that thinking is a form of computation by learning to write simple computer programs for tasks that require thought This book guides students through an exploration of the idea that thinking might be understood as a form of computation Students make the connection between thinking and computing by learning to write computer programs for a variety of tasks that require thought including solving puzzles understanding natural language recognizing objects in visual scenes planning courses of action and playing strategic games The material is presented with minimal technicalities and is accessible to undergraduate students with no specialized knowledge or technical background beyond high school mathematics Students use Prolog without having to learn algorithms Prolog without tears learning to express what they need as a Prolog program and letting Prolog search for answers After an introduction to the basic concepts Thinking as

Computation offers three chapters on Prolog covering back chaining programs and queries and how to write the sorts of Prolog programs used in the book. The book follows this with case studies of tasks that appear to require thought then looks beyond Prolog to consider learning explaining and propositional reasoning. Most of the chapters conclude with short bibliographic notes and exercises. The book is based on a popular course at the University of Toronto and can be used in a variety of classroom contexts by students ranging from first year liberal arts undergraduates to more technically advanced computer science students.

Foundations of Fuzzy Logic and Soft Computing Patricia Melin, 2007-06-05. This book comprises a selection of papers from IFSA 2007 on new methods and theories that contribute to the foundations of fuzzy logic and soft computing. Coverage includes the application of fuzzy logic and soft computing in flexible querying philosophical and human scientific aspects of soft computing search engine and information processing and retrieval as well as intelligent agents and knowledge ant colony.

Conditional and Typed Rewriting Systems Stephane Kaplan, 1991-08-07. In recent years extensions of rewriting techniques that go beyond the traditional untyped algebraic rewriting framework have been investigated and developed. Among these extensions conditional and typed systems are particularly important as are higher order systems graph rewriting systems etc. The international CTRS Conditional and Typed Rewriting Systems workshops are intended to offer a forum for researchers on such extensions of rewriting techniques. This volume presents the proceedings of the second CTRS workshop which contributed to discussion and evaluation of new directions of research. The proceedings of the first CTRS workshop are in Lecture Notes in Computer Science Vol 308. Several important directions for extensions of rewriting techniques were stressed which are reflected in the organization of the chapters in this volume. Theory of conditional and Horn clause systems. Infinite terms non terminating systems and termination. Extension of Knuth Bendix completion. Combined systems combined languages and modularity. Architecture compilers and parallel computation. Basic frameworks for typed and order sorted systems. Extension of unification and narrowing techniques.
