

Per With this pull-down menu, you can set the time units for the Operation Rate. Time units may be in seconds, minutes, hours, or days as shown here.

Resources

Regular Rate This field specifies the cost per unit of time for a resource used in the model. You can use expressions in this field (evaluated at translation) to set the rate or change it using `SetRate`. For more information on the `SetRate` operation statement, see “`SetRate`” on page 556.

Per This pull-down menu allows you to set the time units for the Regular Rate. Times may be in seconds, minutes, hours, or days as shown here.

Cost Per Use This field allows you to define the actual dollar cost accrued each time you use the resource (i.e., the minimum usage cost). The cost per use updates when you obtain the resource and ProModel accepts expressions in this field (evaluated at translation).

Please note

Since ProModel counts a preemption as a use, if you preempt a resource from an entity, the usage

cost applies to the resource only when it returns to the entity.

Entities

Initial Cost This field allows you to define the initial entity cost for an entity which enters the system through a scheduled arrival, a `CREATE` statement, or an `ORDER` statement. ProModel accepts expressions in this field and evaluates them at translation.

Please note

When you implicitly create new entities through a `ROUTE` statement, ProModel does not add an initial cost to the entity. To add an initial cost, use the `INCENTCOST` statement. See “`IncEntCost`” on page 499 for more information.

Building a Model with Costing

When you build a model using the costing feature, you must first define the locations, resources, and entities used in the model. Once you define these model components, you may assign costing information to them through the `Cost` option in the `Build` menu. To collect costing information about your model, uncheck the disable costing box from the simulation options dialog of the simulation menu. By default, ProModel
