

INQUIRY-BASED LEARNING

There are many great models for inquiry-based learning. Each model uses different terminology and different structures. However, in general, there are certain trends you see within the conceptual models. Often, it is cyclical and moves from questions through research, data analysis, and sharing of conclusions.

Promoting Inquiry In Undergraduate Learning:

Promoting Inquiry in Undergraduate Learning Frederick Stirton Weaver, 1989 *Promoting Inquiry in Undergraduate Learning* Frederick Stirton Weaver, 1989 **Reshaping Teaching in Higher Education** Rosanna Breen, Angela Brew, Alan Jenkins, Roger Lindsay, 2003-12-16 Linking research with teaching is one of the main topics in the educational development world This practice based guide shows how academic research activity can be connected to academic teaching activity to ensure that neither operates in a vacuum and each can be enhanced by the other Addressing issues at the individual course and institutional level and written for an international readership this will be a key book for course leaders and educational developers *Proceedings of the National Science Foundation Workshop on the Role of Faculty from the Scientific Disciplines in the Undergraduate Education of Future Science and Mathematics Teachers* ,1993 *Enhancing Undergraduate Learning with Information Technology* National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, 2002-02-09 Enhancing Undergraduate Learning with Information Technology reports on a meeting of scientists policy makers and researchers convened to discuss new approaches to undergraduate science mathematics and technology education The goal of the workshop was to inform workshop participants and the public about issues surrounding the use of information technology in education To reach this goal the workshop participants paid particular attention to the following issues What educational technologies currently exist and how they are being used to transform undergraduate science engineering mathematics and technology education What is known about the potential future impact of information technology on teaching and learning at the undergraduate level How to evaluate the impact of information technology on teaching and learning and What the future might hold **innovations in Learning** Leona Schauble, Robert Glaser, 2013-04-03 This volume documents the growth of a new kind of interdisciplinary teamwork that is evolving among practitioners researchers teacher educators and community partners Its premise the design of learning environments and the development of theory must proceed in a mutually supportive fashion Scientific researchers have learned that a prerequisite to studying the kinds of learning that matter is helping to shoulder the responsibility for ensuring that these forms of learning occur To support and study learning researchers are increasingly making major and long term investments in the design and maintenance of contexts for learning Practitioners are assuming new roles as well reflecting an increasing awareness of the need to move beyond skillful doing If developing learning contexts are to be protected within and expanded beyond the systems that surround them it is necessary to foster professional communities that will support reflection about practice including the generation and evaluation of rich and flexible environments for student thinking One consequence of recent reforms is that teachers are increasingly regarding such tasks as central to their professional development *Innovations in Learning New Environments for Education* describes coordinated interaction between educational design on the one hand and the development of learning theory on the other through a series of examples These

examples have been chosen because they are continuing proven programs with evidence of success Contributors to the volume are researchers and practitioners who have played a role in inventing these programs and have guided their development over a period of years Rather than choosing illustrations of a pipeline or application model of research from research and then to practice the editors of this volume have selected interventions in which researchers and practitioners work together persistently to forge common understanding Such activity is necessarily interdisciplinary often encompassing long spans of time and is more akin to engineering in the field than to laboratory science The common themes that emerge from this activity for example the role of tools talk and community belong exclusively neither to theory nor to practice but to their intersection in commitment to specific contexts of learning and continuing contributions to practice and underlying theory This volume is organized into three sections that reflect different levels and kinds of learning contexts Each of these levels has been the focus of recent cognitive and reform applications to learning and schooling The first offers examples of effective learning in informal settings the second discusses innovative approaches to schooling at the classroom level and the third reviews reforms that regard the entire school as the appropriate unit of change

Assessment and Accountability in Reference Work Susan Griswold Blandy, Lynne M. Martin, Mary L. Strife, 2019-12-05 This book first published in 1992 explores the issue of library assessment methods and the impact of accountability on the delivery of reference services It is a call for librarians to actively adopt performance measures and learn how to work with the results It analyses a wealth of assessment methods that librarians can use to collect data and create standards that are valid practical and useful in accounting for reference services Some of the methodologies described include quantitative measures qualitative measures patron surveys questionnaires interviews case studies peer review unobtrusive testing and even updating the library's policies and procedures manual as a way to evaluate services A variety of assessment methods for reference services are applied to all types of libraries Chapters in *Assessment and Accountability in Reference Work* describe how a small town library defends the relevancy of its services at a town meeting how a special library documents the value of its services to cost conscious management and how academic libraries can become involved in university and college level assessment programs Librarians seeking to develop their own assessment methods will benefit from practical advice on assessing diversity in the library and helpful suggestions for improving reference services through training workshops peer coaching and changes in organizational climate
