Proof, Logic and Formalization Michael Detlefsen, 2005-07-08 A collection of essays from distinguished contributors looking at why it is that mathematical proof is given precedence over other forms of mathematical justification **Certified Programs and Proofs** Jean-Pierre Jouannaud, Zhong Shao, 2011-11-18 This book constitutes the referred proceedings of the First International Conference on Certified Programs and Proofs CPP 2011 held in Kenting Taiwan in December 2011 The 24 revised regular papers presented together with 4 invited talks were carefully reviewed and selected from 49 submissions They are organized in topical sections on logic and types certificates formalization proof assistants teaching programming languages hardware certification miscellaneous and proof perls *Formalization of Complex Analysis and Matrix Theory* Zhiping Shi, Yong Guan, Ximeng Li, 2020-08-10 This book discusses the formalization of mathematical theories centering on complex analysis and matrix theory covering topics such as algebraic systems complex numbers gauge integration the Fourier transformation and its discrete counterpart matrices and their transformation inner product spaces and function matrices The formalization is performed using the interactive theorem prover HOL4 chiefly developed at the University of Cambridge Many of the developments presented are now integral parts of the library of this prover As mathematical developments continue to gain in complexity sometimes demanding proofs of enormous sizes formalization has proven to be invaluable in terms of obtaining real confidence in their correctness This book provides a basis for the computer aided verification of engineering systems constructed using the principles of complex analysis and matrix theory as well as building blocks for the formalization of more involved mathematical theories Handbook of the History and Philosophy of Mathematical Practice Bharath Sriraman, 2024-04-26 The purpose of this unique handbook is to examine the transformation of the philosophy of mathematics from its origins in the history of mathematical practice to the present It aims to synthesize what is known and what has unfolded so far as well as to explore directions in which the study of the philosophy of mathematics as evident in increasingly diverse mathematical practices is headed Each section offers insights into the origins debates methodologies and newer perspectives that characterize the discipline today Contributions are written by scholars from mathematics history and philosophy as well as other disciplines that have contributed to the richness of perspectives abundant in the study of philosophy today who describe various mathematical practices throughout different time periods and contrast them with the development of philosophy Editorial Advisory Board Andrew Aberdein Florida Institute of Technology USA Jody Azzouni Tufts University USA Ot vio Bueno University of Miami USA William Byers Concordia University Canada Carlo Cellucci Sapienza University of Rome Italy Chandler Davis University of Toronto Canada 1926 2022 Paul Ernest University of Exeter UK Michele Friend George Washington University USA Reuben Hersch University of New Mexico USA 1927 2020 Kyeong Hwa Lee Seoul National University South Korea Yuri Manin Max Planck Institute for Mathematics Germany 1937 2023 Athanase Papadopoulos University of Strasbourg France Ulf Persson Chalmers University

Formalizing Medieval Logical Theories Catarina Dutilh Novaes, 2007-04-05 This book presents formalizations of three important medieval logical theories supposition consequence and obligations These are based on innovative vantage points supposition theories as algorithmic hermeneutics theories of consequence analyzed with tools borrowed from model theory and two dimensional semantics and obligations as logical games The analysis of medieval logic is relevant for the modern philosopher and logician This is the first book to render medieval logical theories accessible to the modern philosopher

Intellectics and Computational Logic Steffen Hölldobler, 2013-04-18 Intellectics seeks to understand the functions structure and operation of the human intellect and to test artificial systems to see the extent to which they can substitute or complement such functions The word itself was introduced in the early 1980s by Wolfgang Bibel to describe the united fields of artificial intelligence and cognitive science The book collects papers by distinguished researchers colleagues and former students of Bibel s all of whom have worked together with him and who present their work to him here to mark his 60th birthday The papers discuss significant issues in intellectics and computational logic ranging across automated deduction logic programming the logic based approach to intellectics cognitive robotics knowledge representation and reasoning Each paper contains new previously unpublished reviewed results The collection is a state of the art account of the current capabilities and limitations of a computational logic based approach to intellectics Readership Researchers who are convinced that the intelligent behaviour of machines should be based on a rigid formal treatment of knowledge representation and reasoning

Natural Language Processing in Artificial Intelligence – NLPinAI 2021 Roussanka Loukanova, 2021-11-01 The book covers theoretical work approaches applications and techniques for computational models of information language and reasoning Computational and technological developments that incorporate natural language are proliferating Adequate coverage of natural language processing in artificial intelligence encounters problems on developments of specialized computational approaches and algorithms Many difficulties are due to ambiguities in natural language and dependency of interpretations on contexts and agents Classical approaches proceed with relevant updates and new developments emerge in theories of formal and natural languages computational models of information and reasoning and related computerized applications Its focus is on computational processing of human language and relevant medium languages which can be theoretically formal or for programming and specification of computational systems The goal is to promote intelligent natural language processing along with models of computation language reasoning and other cognitive processes

we get new knowledge Following the maverick tradition in the philosophy of science Carlo Cellucci gradually came to the conclusion that logic can only fulfill its role in mathematics science and philosophy if it helps us to answer this question He argues that mathematical logic is inadequate and that we need a new logic framed in a naturalistic conception of knowledge and philosophy the heuristic conception This path from logic to a naturalistic conception of knowledge and philosophy explains the title From a Heuristic Point of View which recalls the celebrated collection of essays From a Logical Point of View by Willard Van Orman Quine the father of modern naturalized epistemology The word heuristic points to Cellucci s favorite theme and the main difference between him and Quine the emphasis on discovery and building a logic for generating new knowledge This book is a collection of essays from leading figures in this field who discuss criticize or expand on the main topics in Cellucci s work dealing with some of the most challenging questions in logic science and philosophy **New**
