**Some Drinking-water Disinfectants and Contaminants, Including Arsenic** IARC Working Group on the Evaluation of Carcinogenic Risks to Humans, International Agency for Research on Cancer, 2004 A working group of 23 experts from 13 countries met in Lyon to evaluate the evidence for carcinogenicity of arsenic mostly naturally occurring as a

contaminant of drinking water and of the water disinfectant chloramine. The working group also evaluated or re-evaluated four chlorination by-products found in drinking water: namely chloral hydrate, di- and trichloroacetic acids, and 3-chloro-4-dichloromethyl-5-hydroxy-2,5H-furanone, also known as MX. High-level exposure to arsenic in drinking water occurs in some regions such as China, Latin America, Bangladesh, and West Bengal. The Working Group reviewed epidemiological studies of human cancer, mainly ecological studies in Taiwan and Chile, and several case-control and cohort studies in relation to arsenic in drinking water. Arsenic in drinking water, primarily inorganic as arsenate, and to a lesser extent arsenite, was evaluated as carcinogenic to humans, Group 1, on the basis of sufficient evidence for an increased risk for cancer of the urinary bladder, lung, and skin. Studies on inorganic arsenic in experimental animals provided limited evidence for its carcinogenicity, but sufficient evidence was found in experimental animals for the carcinogenicity of dimethylarsinic acid, an organic form of arsenic, which produced urinary bladder tumours in rats and lung tumours in mice after oral administration.

**Subject Guide to Books in Print**, 2001. *Kent and Riegel's Handbook of Industrial Chemistry and Biotechnology* James A. Kent, 2010-05-27. Substantially revising and updating the classic reference in the field, this handbook offers a valuable overview and myriad details on current chemical processes, products, and practices. No other source offers as much data on the chemistry, engineering, economics, and infrastructure of the industry. The Handbook serves a spectrum of individuals, from those who are directly involved in the chemical industry to others in related industries and activities. It provides not only the underlying science and technology for important industry sectors, 30 of the book's 38 chapters, but also broad coverage of critical supporting topics. Industrial processes and products can be much enhanced through observing the tenets and applying the methodologies found in new chapters on Green Engineering and Chemistry, Practical Catalysis, and Environmental Measurements, as well as expanded treatment of Safety and Emergency Preparedness. Understanding these factors allows them to be part of the total process and helps achieve optimum results in, for example, process development, review, and modification. Other new chapters include Nanotechnology, Environmental Considerations in Facilities Planning, Biomass Utilization, Industrial Microbial Fermentation, Enzymes and Biocatalysis, the Nuclear Industry, and History of the Chemical Industry.
