Properties Of Water In Foods In Relation To Quality And Stability:

Properties of Water in Foods D. Simatos, J.L. Multon, 2012-12-06 Water is recognized as being an important factor in numerous phenomena connected with the quality of food. For instance it plays a part in the textural properties of several commodities. Moreover water is an essential parameter determining the behaviour of food products in the course of many processing operations on water will depend the amount of energy necessary for freezing or dehydrating the product water will strongly influence the evolution of physical chemical and biochemical phenomena taking place in the product during processing operations such as heating drying etc. Water will also influence the same reactions as well as the activity of microorganisms during the storage of food products under various conditions. As a result all aspects of quality sensory nutritional and hygienic properties of the food will be affected. In all these circumstances the water content of a product is obviously an important factor but equally important may be the physical properties of this water such as its thermodynamic activity and its mobility. Actually the concept of water activity a_w is now widely used by the food industry and in the legislation of several countries. The idea of a small international meeting devoted to a synthetic review and discussion of knowledge on these various matters was first developed by Dr R B **Properties of Water in Foods**, 1985 **Water Relationships in Foods** Harry Levine, Louise Slade, 2013-11-21 This book was developed from the papers presented at a symposium on Water Relationships in Foods which was held from April 10-14 1989 at the 197th National Meeting of the American Chemical Society in Dallas Texas under the auspices of the Agricultural and Food Chemistry Division of ACS. The editors of this book organized the symposium to bring together an esteemed group of internationally respected experts currently active in the field of water relationships in foods to discuss recent advances in the 1980s and future trends for the 1990s. It was the hope of all these contributors that this ACS symposium would become a memorable keystone above the foundation underlying the field of water in foods. This strong foundation has been constructed in large part from earlier technical conferences and books such as the four milestone International Symposia on the Properties of Water ISOPOW I-IV the recent IFT Basic Symposium on Water Activity and Penang meeting on Food Preservation by Moisture Control as well as the key fundamental contributions from the classic 1980 ACS Symposium Series 127 on Water in Polymers and from Felix Franks famous seven volume Comprehensive Treatise on Water plus five subsequent volumes of the ongoing Water Science Reviews. The objective of the 1989 ACS symposium was to build on this foundation by emphasizing the most recent and major advances.

Properties of Water in Foods : in Relation to Quality and Stability J. L. Multon, D. Simatos, 1985 Food Preservation Techniques Peter Zeuthen, Leif Bøgh-Sørensen, 2003-10-30 Extending the shelf life of foods whilst maintaining safety and quality is a critical issue for the food industry. As a result there have been major developments in food preservation techniques which are summarised in this authoritative collection. The first part of the book examines the key issue of maintaining safety as preservation methods become more varied and complex. The rest of the book looks both at individual

technologies and how they are combined to achieve the right balance of safety quality and shelf life for particular products Provides an authoritative review of the development of new and old food preservation technologies and the ways they can be combined to preserve particular foods Examines the emergence of a new generation of natural preservatives in response to consumer concerns about synthetic additives Includes chapters on natural antimicrobials bacteriocins and antimicrobial enzymes as well as developments in membrane filtration ultrasound and high hydrostatic pressure
