Kharisov,Oxana Vasilievna Kharissova,Ubaldo Ortiz-Mendez,2012-03-19 As nanotechnology has developed over the last two decades some nanostructures such as nanotubes nanowires and

nanoparticles have become very popular. However, recent research has led to the discovery of other less common nanoforms which often serve as building blocks for more complex structures. In an effort to organize the field, the Handbook of Less Common Nanostructures presents an informal classification based mainly on the less common nanostructures. A small nanotechnological encyclopedia, this book describes a range of little known nanostructures, offers a unifying vision of the synthesis of nanostructures and the generalization of rare nanoforms. Includes a CD ROM with color versions of more than 100 nanostructures. Explores the fabrication of rare nanostructures including modern physical, chemical, and biological synthesis techniques. The Handbook of Less Common Nanostructures discusses a classification system not directly related to the dimensionality and chemical composition of nanostructure-forming compounds or composite. Instead, it is based mainly on the less common nanostructures. Possessing unusual shapes and high surface areas, these structures are potentially very useful for catalytic, medical, electronic, and many other applications.

The Handbook of Photonics Mool C. Gupta, John Ballato, 2018-10-03. Reflecting changes in the field in the ten years since the publication of the first edition, The Handbook of Photonics Second Edition explores recent advances that have affected this technology. In this new updated second edition, editor Mool Gupta is joined by John Ballato, strengthening the handbook with their combined knowledge and the continued contributions of world-class researchers. New in the Second Edition: Information on optical fiber technology and the economic impact of photonics; Coverage of emerging technologies in nanotechnology; Sections on optical amplifiers and polymeric optical materials. The book covers photonics materials, devices, and systems respectively. An introductory chapter new to this edition provides an overview of photonics technology innovation and economic development. Resting firmly on the foundation set by the first edition, this new edition continues to serve as a source for introductory material and a collection of published data for research and training in this field, making it the reference of first resort.

**III-V Semiconducting Compounds** M. Neuberger, 2013-03-09. The Electronic Properties Information Center has developed the Data Table as a precis of the most reliable information available for the physical, crystallographic, mechanical, thermal, electronic, magnetic, and optical properties of a given material. Data Tables serve as an introduction to the graphic data compilations on the material published by the Electronic Properties Information Center (EPIC) as Data Sheets. Although the Data Sheets are principally concerned according to the scope of the Center with electronic and optical data, it is believed that data covering the complete property spectrum is of the first importance to every scientist and engineer, whatever his information requirements. The enthusiastic reception of these Data Tables has confirmed this opinion, and increasing requests for this highly selective type of information have resulted in these III-V Semiconductor Compounds Data Tables. The major problem in this type of selective data compilation on a semiconducting material lies in the material purity. Properties may vary so widely with doping, crystallinity, defects, geometric forms, and the other parameters of preparation that any attempts at comparison normally fail. On this basis, we have consistently attempted to give values

derived from experiments on the highest purity single crystals or epitaxial films At the very least these data should be reproducible and this gives the data their principal validity If such values however are not available then the next best data are reported together with material specifications These latter include the carrier concentration and the dopant
