Processing, and Devices David Louis Harame, 2004 **Silicon Quantum Integrated Circuits** E. Kasper, D.J.

Paul, 2005-01-19 Quantum size effects are becoming increasingly important in microelectronics as the dimensions of the structures shrink laterally towards 100 nm and vertically towards 10 nm Advanced device concepts will exploit these effects for integrated circuits with novel or improved properties Keeping in mind the trend towards systems on chip this book deals with silicon based quantum devices and focuses on room temperature operation The basic physical principles materials technological aspects and fundamental device operation are discussed in an interdisciplinary manner It is shown that silicon

germanium SiGe heterostructure devices will play a key role in realizing silicon based quantum electronics

Silicon-Based Photonics Erich Kasper, Jinzhong Yu, 2020-07-24 Silicon photonics has evolved rapidly as a research topic with enormous application potential The high refractive index contrast of silicon on insulator SOI shows great promise for submicron waveguide structures suited for integration on the chip scale in the near infrared region Ge and GeSn Si heterostructures with different elastic strain levels already provide expansion of the spectral range high speed operation efficient modulation and switching of optical signals and enhanced light emission and lasing This book focuses on the integration of heterostructure devices with silicon photonics The authors have attempted to merge a concise treatment of classical silicon photonics with a description of principles prospects challenges and technical solution paths of adding silicon based heterostructures The book discusses the basics of heterostructure based silicon photonics system layouts and key device components keeping in mind the application background Special focus is placed on SOI based waveguide configurations and Ge and GeSn Si heterostructure devices for light detection modulation and light emission and lasing The book also provides an overview of the technological and materials science challenges connected with integration on silicon The first half of the book is mainly for readers who are interested in the topic because of its increasing importance in different fields while the latter half covers different device structures for light emission detection modulation extension of the wavelength beyond 1.6 μm and lasing as well as future challenges Silicon Heterostructure Handbook John D. Cressler, 2018-10-03 An extraordinary combination of material science manufacturing processes and innovative thinking spurred the development of SiGe heterojunction devices that offer a wide array of functions unprecedented levels of performance and low manufacturing costs While there are many books on specific aspects of Si heterostructures the Silicon Heterostructure Handbook Materials Fabrication Devices Circuits and Applications of SiGe and Si Strained Layer Epitaxy is the first book to bring all aspects together in a single source Featuring broad comprehensive and in depth discussion this handbook distills the current state of the field in areas ranging from materials to fabrication devices CAD circuits and applications The editor includes snapshots of the industrial state of the art for devices and circuits presenting a novel perspective for comparing the present status with future directions in the field With each chapter contributed by expert authors from leading industrial and research institutions worldwide the book is unequalled not only in breadth of scope but also in depth of coverage timeliness of results and authority of references It also includes a foreword by Dr Bernard S Meyerson a pioneer in SiGe technology Containing nearly 1000 figures along with valuable appendices the Silicon Heterostructure Handbook authoritatively surveys materials fabrication device physics transistor optimization optoelectronics components measurement compact modeling circuit design and device simulation Properties of Amorphous Carbon S. R. P. Silva, 2003 World experts in amorphous carbon have been drawn together to produce this comprehensive commentary on the current state and future prospects of amorphous carbon a highly functional material

Amorphous carbon has a wide range of properties that are primarily controlled by the different bond hybridisations possible in such materials. This allows for the growth of an extensive range of thin films that can be tailored for specific applications. Films can range from those with high transparency and which are hard and diamond like through to those which are opaque soft and graphitic like. Application areas including field emission cathodes MEMs electronic devices medical and optical coatings are now close to market.

Process Technology for Silicon Carbide Devices Carl-Mikael Zetterling, 2002 This book explains why SiC is so useful in electronics gives clear guidance on the various processing steps growth doping etching contact formation dielectrics etc and describes how these are integrated in device manufacture.

Properties, Growth and Applications of Diamond A. J. Neves, Maria Helena Nazaré, 2001 Recent breakthroughs in the synthesis of diamond have led to increased availability at lower cost. This has spurred R D into its characterization and application in machine tools optical coatings X ray windows and light emitting optoelectronic devices. This book draws together expertise from some 60 researchers in Europe and the USA working on bulk and thin film diamond. All fully refereed the contributions are combined to form a highly structured volume with reviews evaluations tables and illustrative material together with expert guidance to the literature.

Properties of Lithium Niobate Institution of Electrical Engineers, 2002 The use of lithium niobate in signal filtering in TV sets and video cassette recorders is well established and it is finding increased application in optoelectronic modulation devices in DWDM dense wavelength division multiplexing fibre optic systems. This fully illustrated volume brings electronic engineers materials scientists and physicists up to date by enlisting the expertise of active researchers and presenting their considered reviews.

Automation, Communication and Cybernetics in Science and Engineering 2009/2010 Sabina Jeschke, Ingrid Isenhardt, Klaus Henning, 2011-01-21 The book presents a representative selection of all publications published between 01 2009 and 06 2010 in various books journals and conference proceedings by the researchers of the institute cluster IMA Institute of Information Management in Mechanical Engineering ZLW Center for Learning and Knowledge Management IfU Institute for Management Cybernetics Faculty of Mechanical Engineering RWTH Aachen University.
