**Prophet of the Atomic Age** Arnulf K. Esterer, Louise A. Esterer, 1972-01-01 A biography of the Hungarian born scientist instrumental in developing the atomic bomb for the United States *PROPHET OF THE ATOMIC AGE*. Arnulf K. Esterer, 1972 Toward a Livable World Leo Szilard, 1987 Leo Szilard conceived of the possibility of nuclear fission sustained by a chain reaction years before it was achieved in the laboratory He was also one of the initiators of the atomic bomb project in the United States Yet he dedicated his final years to the causes of understanding and sustaining life The eminent physicist became a biologist and a vital force calling for the control of nuclear and other weapons This book documents Szilard s energetic attempts to influence public policy on arms control and disarmament issues both through open political processes and statements and through behindthe scenes contacts with Washington power sources and a remarkable exercise in personal diplomacy with Nikita Khrushchev Many of the issues Szilard deals with in this valuable record of the years 1947 1963 are still crucial today His opposition to antiballistic missile systems his proposal for a Washington Moscow hot line his work on the Pugwash conferences that brought together scientists from the East and the West his pivotal role in the creation of the Council for a Livable World his advocacy of a nuclear policy of no first use and restricted retaliation and his support of minimum deterrence in place of an overwhelming counterforce capability all these matters are as important in the 1980s as they were in the 1950s and 1960s Helen S Hawkins and G Allen Greb are affiliated with the Institute on Global Conflict and Cooperation University of California San Diego The late Gertrud Weiss Szilard also served as coeditor of the first two volumes of her husband s work *The Collected Works of Leo Szilard Scientific Papers* and *Leo Szilard His Version of the Facts* Barton J Bernstein is professor in the Department of History Stanford University Genius in the Shadows William Lanouette, 2013-09-01 Well known names such as Albert Einstein Enrico Fermi J Robert Oppenheimer and Edward Teller are usually those that surround the creation of the atom bomb One name that is rarely mentioned is Leo Szilard known in scientific circles as father of the atom bomb The man who first developed the idea of harnessing energy from nuclear chain reactions he is curiously buried with barely a trace in the history of this well known and controversial topic Born in Hungary and educated in Berlin he escaped Hitler s Germany in 1933 and that first year developed his concept of nuclear chain reactions In order to prevent Nazi scientists from stealing his ideas he kept his theories secret until he and Albert Einstein pressed the US government to research atomic reactions and designed the first nuclear reactor Though he started his career out lobbying for civilian control of atomic energy he concluded it with founding in 1962 the first political action committee for arms control the Council for a Livable World Besides his career in atomic energy he also studied biology and sparked ideas that won others the Nobel Prize The Salk Institute for Biological Studies in La Jolla California where Szilard spent his final days was developed from his concepts to blend science and social issues The Making of the Atomic Bomb Richard Rhodes, 2012-09-18 Winner of the Pulitzer Prize the National Book Award and the National Book Critics Circle Award The

definitive history of nuclear weapons from the turn of the century discovery of nuclear energy to J Robert Oppenheimer and the Manhattan Project this epic work details the science the people and the sociopolitical realities that led to the development of the atomic bomb This sweeping account begins in the 19th century with the discovery of nuclear fission and continues to World War Two and the Americans race to beat Hitler s Nazis That competition launched the Manhattan Project and the nearly overnight construction of a vast military industrial complex that culminated in the fateful dropping of the first bombs on Hiroshima and Nagasaki Reading like a character driven suspense novel the book introduces the players in this saga of physics politics and human psychology from FDR and Einstein to the visionary scientists who pioneered quantum theory and the application of thermonuclear fission including Planck Szilard Bohr Oppenheimer Fermi Teller Meitner von Neumann and Lawrence From nuclear power s earliest foreshadowing in the work of H G Wells to the bright glare of Trinity at Alamogordo and the arms race of the Cold War this dread invention forever changed the course of human history and The Making of The Atomic Bomb provides a panoramic backdrop for that story Richard Rhodes s ability to craft compelling biographical portraits is matched only by his rigorous scholarship Told in rich human political and scientific detail that any reader can follow The Making of the Atomic Bomb is a thought provoking and masterful work Advocating Weapons, War, and Terrorism Ian E. J. Hill, 2018-08-28 Techn s Paradox a frequent theme in science fiction is the commonplace belief that technology has both the potential to annihilate humanity and to preserve it Advocating Weapons War and Terrorism looks at how this paradox applies to some of the most dangerous of technologies population bombs dynamite bombs chemical weapons nuclear weapons and improvised explosive devices Hill s study analyzes the rhetoric used to promote such weapons in the nineteenth and twentieth centuries By examining Thomas R Malthus s Essay on the Principle of Population the courtroom address of accused Haymarket bomber August Spies the army textbook Chemical Warfare by Major General Amos A Fries and Clarence J West the life and letters of Manhattan Project physicist Leo Szilard and the writings of Ted Unabomber Kaczynski Hill shows how contemporary societies are equipped with abundant rhetorical means to describe and debate the extreme capacities of weapons to both destroy and protect The book takes a middle way approach between language and materialism that combines traditional rhetorical criticism of texts with analyses of the persuasive force of weapons themselves as objects irrespective of human intervention Advocating Weapons War and Terrorism is the first study of its kind revealing how the combination of weapons and rhetoric facilitated the magnitude of killing in the nineteenth and twentieth centuries and illuminating how humanity understands and acts upon its propensity for violence This book will be invaluable for scholars of rhetoric scholars of science and technology and the study of warfare **Physics and Nuclear Arms Today** David Hafemeister, Barbara Goss Levi, 1991-02-11 Physics and Nuclear Arms Today is a collection of the best articles written about the arms race which appeared in Physics Today between 1976 and 1989 The articles explore a wide variety of topical issues such as the effects of nuclear weapons nuclear testing offensive strategic weapons defensive SDI or

Star Wars weapons nuclear nonproliferation and the social responsibility of scientists as well as a wide selection of articles which chronicle the history of nuclear weaponry The authors also represent a broad spectrum of well known names in the physics community including Andrei Sakharov Sidney Drell Wolfgang Panofsky Edward Teller Frank von Hippel Victor Weiskopf and Freeman Dyson Of interest to physicists interested in arms control issues nuclear weapons and international relations science and defense policy makers

*The Art of Discovery* Margareth Hagen,Randi Koppen,Margery Vibe Skagen,2010-08-30 This anthology brings together scholars from literature the natural sciences and the philosophy of science to present new perspectives on the relations between literary and scientific communities Drawing on literature spanning the 19th and 20th centuries as well as Europe and the Americas the authors explore how science has been portrayed from the perspective of literature at different times and in different places as challenge or opportunity promise or scandal The disturbance of science emanates perhaps from its association with a frightening future or its ability to change the appearance of the past the scandal occurs as it recalls us to thresholds and hybrids human and non human animal and machine Science however also emerges as a source of metaphor and imaginative modelling of encodings and decodings representations and discoveries Less prominent in the collection though no less important is the view on how scientific cultures portray literature or the literary academic and how science reflects on itself

**Doomsday Men** P. D. Smith,2024-09-04 The gripping untold story of the doomsday bomb the ultimate weapon of mass destruction Chillingly compelling New Scientist In 1950 Hungarian born scientist Leo Szilard made a dramatic announcement on American radio science was on the verge of creating a doomsday bomb For the first time in history mankind realized that he had within his grasp a truly God like power the ability to destroy life itself The shockwave from this statement reverberated across the following decade and beyond If detonated Szilard s doomsday device a huge cobalt clad H bomb would pollute the atmosphere with radioactivity and end all life on earth The scientific creators of such apocalyptic weapons had transformed the laws of nature into instruments of mass destruction and for many people in the Cold War there was little to distinguish real scientists from that fictional master of megadeath Stanley Kubrick s Dr Strangelove Indeed as P D Smith s chilling account *Doomsday Men* shows the dream of the superweapon begins in popular culture This is a story that cannot be told without the iconic films and fictions that portray our deadly fascination with superweapons from H G Wells s *The War of the Worlds* to Nevil Shute s *On the Beach* and Kubrick s *Dr Strangelove* or *How I Learned to Stop Worrying and Love the Bomb* Although scientists admitted it was possible to build the cobalt bomb no superpower would admit to having created one However it remained a terrifying possibility striking fear into the hearts of people around the world The story of the cobalt bomb is an unwritten chapter of the Cold War but now P D Smith reveals the personalities behind this feared technology and shows how the scientists responsible for the twentieth century s most terrible weapons grew up in a culture dreaming of superweapons and Wellsian utopias He argues that in the end the doomsday machine became the ultimate symbol of

humanity's deepest fears about the science of destruction Weaving together biography science and art Smith has created a compelling history of physics in the twentieth century focusing on the long lasting search for ever more destructive weapons from the development of chemical warfare in World War I Germany through the arms race of the Cold War Captivating and thoroughly referenced this chronicle should interest a wide audience from science and history buffs to armchair politicians Publishers Weekly

**The Nuclear Spies** Vince Houghton, 2019-09-15 Why did the US intelligence services fail so spectacularly to know about the Soviet Union's nuclear capabilities following World War II As Vince Houghton historian and curator of the International Spy Museum in Washington DC shows us that disastrous failure came just a few years after the Manhattan Project's intelligence team had penetrated the Third Reich and knew every detail of the Nazi's plan for an atomic bomb What changed and what went wrong Houghton's delightful retelling of this fascinating case of American spy ineffectiveness in the then new field of scientific intelligence provides us with a new look at the early years of the Cold War During that time scientific intelligence quickly grew to become a significant portion of the CIA budget as it struggled to contend with the incredible advance in weapons and other scientific discoveries immediately after World War II As *The Nuclear Spies* shows the abilities of the Soviet Union's scientists its research facilities and laboratories and its educational system became a key consideration for the CIA in assessing the threat level of its most potent foe Sadly for the CIA scientific intelligence was extremely difficult to do well For when the Soviet Union detonated its first atomic bomb in 1949 no one in the American intelligence services saw it coming

**Prophets Without Honor** William Strabala, 2007 This is a story of political protest grounded in historical necessity It is the story of a group of American men who happen to be priests who happen to have served decades in American prisons It is a story about America a story told before only in b Peace Movement Organizations and Activists in the U.S. John Lofland, Victoria Lee Johnson, Pamela Kato, 1991 Here is the most comprehensive compilation and analytic classification of book length publications on the immense upwelling of peace activism that occurred in the United States during the 1980's It is an indispensable reference addition to the bookshelf of all researchers of peace movements in the United States Focusing on the post World War II years with particular attention to the 1980's this volume is an extensive bibliography of books categorized into six categories by theory transcenders educators intellectuals politicians protestors and prophets Peace Movement Organizations and Activists in the United States An Analytic Bibliography is an indispensable tool for researchers and students of peace movements from several disciplines including history political science security studies sociology and international relations

*Manhattan Project: The Untold Story of the Making of the Atomic Bomb* Stephane Groueff, 2023-12-13 Groueff a Paris Match reporter was sponsored by The Reader's Digest to write this prodigious account of the multiple efforts which went into the creation of the first atomic bomb between 1942 and 1945 The book is a history of the men involved mainly and Groves the military commander is obviously the author's hero Reading like the account of a hurdle race the book charges into a discussion of a problem then finds and

describes the man who bested it Thus are described the building of Oak Ridge Fermi s atomic pile the electromagnetic process the crises over the barrier and the valves for the gaseous diffusion process the last minute decisions concerning the implosion process with plutonium Groueff does convey well a scene of fantastic activity where different solutions to one problem were worked on simultaneously where industrial equipment came before scientific results were known where the impossible was achieved in time The material is fascinating and the scientific information is well presented an excellent overall view of a monumental project Kirkus Groueff has for the first time given due recognition to some of the minor figures particularly engineers and technicians and has preserved in his pages much information that would otherwise perish with the participants or lie forever buried in the archives Kendall Birr The American Historical Review Groueff covers the Manhattan Project from its beginning in 1942 to the bombing of Hiroshima he concentrates on the engineering and industrial effort that went into producing the first atomic weapons The result is a popular but responsible account episodic in structure rich in detail and human interest for the first time a book aimed at the mass market gives engineers and industrialists their due It is a great story of the almost incredibly complex task of translating theory into industrial and military reality Oscar E Anderson Jr Science So intriguing in fact and in style is the text of the narrative of this book that once begun it cannot be put down until the end In these pages the names and roles of some of the world s greatest scientists and engineers unfold in thrilling parade with Dr Vannevar Bush the leader These men of vast knowledge and ability unite with the commercial managers and their companies mobilized by the hundreds for the construction and operation of the many facilities involved Leo A Codd Ordnance Excellent maintains a high degree of exciting suspense Washington Star A fascinating account of a stupendous effort Chicago Tribune

The Men of Manhattan Jeffrey Strickland,2011-05-16 The Men of Manhattan is a short history of the origins and development of the American atomic bomb program during World War II focusing on the men and woman who made it possible Beginning with the scientific developments of the pre war years the book details the role of scientific exploration in conducting a secret nationwide enterprise that took science from the laboratory and into combat with an entirely new type of weapon Throughout the book short biographies of the men and a women Lise Meitner Leona Woods Marshall Libby and Chien Shiung Wu are provided where most pertinent Although nuclear weapons still pose a threat to peace throughout the world splitting the atom was a watermark point in nuclear science and quantum physics Harnessed responsibly the enormous power of an atomic chain reaction can serve humanity for good e g atomic energy Nuclear medicine and x ray technology are examples of the benefits brought about by these pioneers the Men of Manhattan
