River Management:

River Channel Management Peter Downs, Ken Gregory, 2014-02-24 River Channel Management is the first book to deal comprehensively with recent revolutions in river channel management. It explores the multi disciplinary nature of river channel management in relation to modern management techniques that bear the background of the entire drainage basin in mind. It uses channel restoration where appropriate and are designed to be sustainable. River Channel Management is divided into five sections. The Introduction outlines the need for river channel management. Retrospective Review offers an overview of twentieth century engineering methods and the ways that river channel systems operate. Realisation explains how greater understanding of river channel adjustments, channel hazards and river basin planning created a context for twenty first century management. Requirements for Management explains and examines environmental assessment, restoration based approaches and methods that work towards design with nature. Final Revision speculates about prospects for twenty first century river channel management. River Channel Management is written for higher level undergraduates and for postgraduates in geography, ecology, engineering, planning, geology and environmental science for professionals involved in river channel management and for staff in environmental agencies.

River Conservation and Management Philip Boon, Paul Raven, 2012-02-10 This book is intended for those with an academic, scientific and practical interest in river conservation and management. It provides an overview of how changes in legislation, policies, institutional responsibilities, science, technology, practical techniques and public perception have influenced how rivers have been managed over the past 20 years and the challenges that lie ahead during the next 20 years. The book is based on the international conference River Conservation and Management 20 Years On held at York. Thirty one chapters with contributions from North and South America, Europe, Asia and Australasia provide a wide ranging perspective on this complex but profoundly important subject. Following an introduction that chronicles the most important contextual changes, the book is organized into four broad topics: Catchment management, ecosystem integrity and the threats to river ecosystems; this covers progress on understanding and addressing the pressures affecting rivers, many of which will be amplified by climate change and increasing human demands for water; Methods and approaches illustrating some recent techniques that have been developed to assess condition and conservation status across different types of river; Recovery and rehabilitation providing an insight into the principles, practice, public involvement and institutional networks that support and make improvements to modified river reaches; Integrating nature conservation into wider river management demonstrating the importance of integrated planning, involvement of local communities and the use of adaptive management in achieving multiple environmental and economic benefits along rivers used for different purposes. The final chapter discusses the challenges faced in dealing with an uncertain future. More than 1200 different references and numerous web site citations provide the reader with an invaluable source of knowledge on the subject area.

Missouri River Planning National Research Council, Division on Earth and Life

Studies, Water Science and Technology Board, Committee on Missouri River Recovery and Associated Sediment Management Issues, 2011-03-24 Historically the flow of sediment in the Missouri River has been as important as the flow of water for a variety of river functions The sediment has helped form a dynamic network of islands sandbars and floodplains and provided habitats for native species Further downstream sediment transported by the Missouri and Mississippi Rivers has helped build and sustain the coastal wetlands of the Mississippi River delta The construction of dams and river bank control structures on the Missouri River and its tributaries however has markedly reduced the volume of sediment transported by the river These projects have had several ecological impacts most notably on some native fish and bird species that depended on habitats and landforms created by sediment flow Missouri River Planning describes the historic role of sediment in the Missouri River evaluates current habitat restoration strategies and discusses possible sediment management alternatives The book finds that a better understanding of the processes of sediment transport erosion and deposition in the Missouri River will be useful in furthering river management objectives such as protection of endangered species and development of water quality standards

Guidelines for Mainstreaming Natural River Management in Water Sector Investments Asian Development Bank, 2021-09-01 The natural river management NRM approach is designed to harness the natural functions of river systems so they sustainably provide important services such as water supply and flood and drought management Drawing heavily on the concepts of ecosystem services integrated water resources management and integrated river basin management NRM aims to harmonize nature based solutions and nonstructural measures with engineering interventions This publication explains the value of NRM and provides step by step guidance on how the approach can be systematically integrated into water sector investments

The Social Side of River Management W. T. de Groot, Jeroen Warner, 2011 River management faces many challenges world wide including climate change flood risks and the demand for more adaptive

and ecosystem based systems Instead of raising the dikes even higher the new adage for river managers is to give the rivers more space to drain their waters This in turn implies that river management will become a social business with strong involvement of local communities This book offers various examples and theories on how to avoid conflict and enter into fruitful relationships with river communities

An Introduction to River Management Richard Bailey,1991 **River Conservation Directory** ,1990 **Making Space for the River** Jeroen Frank Warner,Arwin van Buuren,Jurian Edelenbos,2012-11-01 This book examines recent developments in river flood management from the viewpoint of Making Space for the River and the resulting challenges for water governance Different examples from Europe and the United States of America are discussed that aim to green rivers including increasing river discharge for flood management enhancing natural and landscape values promoting local or regional economic development and urban regeneration Making Space for the River presents not only opportunities and synergies but also risks as it crosses established institutional boundaries and touches on multiple stakeholder interests which can easily clash Making Space for the River helps the reader to understand the policy and governance dynamics that lead to these tensions and pays attention to a variety of attempts to organize effective and legitimate governance approaches The book helps to realize connections between policy domains problem frames and goals of different actors at different levels that contribute to decisive and legitimate action Making Space for the River has an international comparative character that sheds light upon both the country specific governance dilemmas which relate to specific state traditions and institutional characteristics of national water management but also uncovers interesting similarities which provide us with building blocks to formulate more generic lessons about the governance of Making Space for the River in different institutional and social contexts The authors of this book come from a variety of disciplines including public administration town and country planning geography and anthropology and these different disciplines bring multiple ways of knowing and understanding of Making Space for the River programs The book combines interdisciplinary scientific analyses of Space for the River projects and programs with practical knowing and lessons drawing Making Space for the River is written for both practitioners and scholars and students of environmental policy spatial planning land use and water management Editors Jeroen Warner Assistant Professor of Disaster Studies Wageningen University The Netherlands Arwin van Buuren Associate Professor of Public Administration Erasmus University Rotterdam The Netherlands Jurian Edelenbos Professor of Public Administration Erasmus University Rotterdam The Netherlands

Management and Restoration of Fluvial Systems with Broad Historical Changes and Human Impacts L. Allan James,Sara L. Rathburn,George Richard Whittecar,2009-01-01 **Arizona Statewide Wild and Scenic River(s) (WSR) Legislative EIS** ,1994 *Managing Urban Rivers* Victor R. Shinde,Rajiv Ranjan Mishra,Uday Bhonde,Hitesh Vaidya,2023-09-23 *Managing Urban Rivers* From Planning to Practice captures the different facets of river management required for integrating rivers within the development landscape of cities in a sustainable manner Sections cover the entire spectrum of urban river management from planning to

actual on the ground implementation providing a one stop destination for knowledge on urban river management Edited by a team of four experts with practical experience in this domain the different chapters of the book are authored by eminent scholars and practitioners with expertise in specific areas of urban river management Urban rivers and their management is a hot topic as governments across the world are focusing on this aspect especially since it has direct implications for SDG target 6.6 which aims to protect and restore water related ecosystems including mountains forests wetlands rivers aquifers and lakes Presents practical global case studies in almost every chapter Provides recommendations for best practices based on lessons from different successful case studies as well as the expert insights of the authors Features contributions from global experts for a unique and specialized approach to the topic of urban rivers **AS Level Geography** Ann Bowen, John Pallister, 2000 This work aims to combine comprehensive coverage of the full range of topics with a flexible approach to learning It covers basic geographical skills and offers help with revision and exam techniques *Guidelines for River Management*, 1979 *Alternatives in Regulated River Management* James A. Gore, 2018-01-18 Researchers and managers of regulated river systems will find this volume useful in acquiring information for deciding an integrated management plan for regulated river operations Rather than the ecological theory of impacts of flow regulation emphasis has been placed on methods to predict water quality and habitat alterations as well as techniques to mitigate impacts from various operational scenarios Although most chapters refer to impacts of riverine impoundments these alternatives apply to any regulated situation in which changes in water quality or flow pattern occur The predictive modeling techniques are explained primarily from a theoretical background However extensive bibliographies can guide the uninitiated to specific texts and software Where controversial techniques have been presented alternate methods are also described Major topic areas include water quality problems channel modification and management ecological modeling and management as well as a section on perspectives for ecological management and special problems in developing nations *The Politics of Fresh Water* Catherine M. Ashcraft, Tamar Mayer, 2016-12-08 Water scarcity is not simply the result of what nature has to offer but always involves power relations and political decisions This volume discusses the politics of the freshwater crisis specifically how access to water is determined in different regions and historical periods how conflict is constructed and managed and how identity and efforts to control water systems through development technologies and institutions shape one another The book analyzes responses to the water crisis as efforts to mitigate water insecurity and as expressions of collective identity that legitimate resist or seek to transform existing inequalities The chapters focus on different processes that contribute to freshwater scarcity including land use decisions pollution privatization damming climate change discrimination water management institutions and technology Case studies are included from North and South America Africa Asia Europe and New Zealand **Pike National Forest (N.F.)**, 2004 **Federal Register**, 2013 **Enhancing Water Use Efficiency in Korea** Organisation for Economic Co-Operation and Development (OECD), 2017-12-15 The report building on a policy

dialogue with a range of stakeholders in Korea analyses how economic policy instruments under the responsibility of the Korean Ministry of Land Infrastructure and Transport can be adjusted to contribute to water policy objectives It also investigates how Smart Water Management Korea an initiative by K water that combines information and communication technology with water technology can be harnessed to better contribute to water management in the country Finally it identifies some of the limitations of prevalent water allocation regimes which need to be addressed to make the best use of available water resources Since 1965 the Korean Government has invested heavily in quantitative development strategies to meet water needs and despite highly variable water availability this has allowed for and facilitated rapid urbanisation and economic growth However several long term trends are expected to affect the capacity of the current water management system to adequately respond to current and future water risks such as rapid ageing of the population fiscal consolidation and climate change These call for a renewed emphasis on water use efficiency Fisheries Review ,1994
