and discuss the cycles of materials on the earth's surface from weathering processes to the movement of material through the river system and oceans to their deposition. The committee sets research directions in five areas: shallow water studies, mapping rates of change, sample dating, and most critical, understanding whether human influence can exceed the natural variability in geoflux processes. This volume will be important reading for geophysical scientists, researchers, faculty, and students as well as environmental policymakers. **Monthly Catalogue, United States Public Documents**, 1995-12
