Topographic mapping plays a basic and important role within the extensive field of cartography. In recent years this type of mapping has become somewhat neglected and available literature is normally restricted to details concerning the programmes of individual countries often presented in the form of monographs. Topographic maps are essential tools for use in development projects, resource exploitation, the planning of construction infrastructure and recreation. They also give detailed illustration of the relative degrees of development of areas within a landscape and are thus unique in demonstrating the cultural status of a country. This book is the second of three volumes and gives details and examples of topographic maps from Central and South America and Africa. The information supplied for each country consists of a text including a brief history of the development of topographic mapping, geodetic data, map scales and series as well as extracts of maps and index sheets illustrating the present status of map coverage within that country. There is currently no other work employing the approach adopted in assembling this inventory. This work is a comprehensive and important reference and source book for information in the field of topographic mapping. **World Mapping Today** Bob Parry, Chris Perkins, 2011-12-22. No detailed description available for *World Mapping Today*. *Books in Print Supplement*, 1994. **The Car and British Society** Sean O'Connell, 1998. The car was first introduced into British society over one hundred years ago. Sean O'Connell's study of the social impact of the car offers a radical new way of looking at the history of motoring. *The Emergence of Bicycling and Automobility in Britain* Craig Horner, 2021-01-28. In the late 19th century bicycling and motoring offered new ways for a hardy minority to travel. Escaping from the tyranny of the train timetables, these entrepreneurs were able to promote private mobility when the road technology and infrastructure were unequal to the task. With a moribund network, out of town poor roadside accommodation and few services, how could road traction persist and ultimately thrive? Drawing on a wealth of primary sources including magazines, newspapers and advice books on stable management, this book explores the emergence and development of bicycling and automobility in Britain with a focus on the racing driver cum entrepreneur SF Edge 1868-1940 and his network. Craig Horner considers the motivations, prejudices and cultures of those who promoted and consumed road traction, providing new insights into social class, leisure, sport and tourism in Britain. In addition, he places early British bicycling and automobility in an international context, providing fruitful comparisons with the movements in France, Germany and the United States. *The Emergence of Bicycling and Automobility in Britain* is an excellent resource for scholars and students interested in mobility studies, social and cultural history and the history of technology.
