Robert T Gunther And The Old Ashmolean:

Robert T. Gunther and the Old Ashmolean Robert Theodore Gunther, 1985 The History of the University of Oxford: Volume VIII: The Twentieth Century Brian Harrison, Trevor Henry Aston, 1994-04-07 This volume the eighth in The History of the University of Oxford shows how one of the world's major universities has responded to the formidable challenges offered by the twentieth century. Because Oxford's response has not taken a revolutionary or dramatic form outside observers have not always appreciated the scale of its transformation. Here full attention is given to the forces for change: the rapid growth in provision for the natural and social sciences; the advance of professionalism in scholarship; sport and cultural achievement; the diffusion of international influences through Rhodes scholars; two world wars; and the University's mounting research priorities; the growing impact of government and of public funding; the steady advance of women; and the impact made by Oxford's broadened criteria for undergraduate admission. The volume also provides valuable background material for the discussion of educational policy. In short, it presents the reader with a rich cornucopia of insight into many aspects of British life. *Directory of Rare Book and Special Collections in the UK and Republic of Ireland* Karen Attar, 2016-05-31 This directory is a handy on-volume discovery tool that will allow readers to locate rare book and special collections in the British Isles. Fully updated since the second edition was published in 1997, this comprehensive and up-to-date guide encompasses collections held in libraries, archives, museums, and private hands. The Directory provides a national overview of rare book and special collections for those interested in seeing quickly and easily what a library holds. Directs researchers to the libraries most relevant for their research. Assists libraries considering acquiring new special collections to assess the value of such collections beyond the institution, showing how they fit into a unique and distinctive model. Each entry in the Directory provides background information on the library and its purpose; full contact details; the quantity of early printed books; information about particular subject and language strengths; information about unique works and important acquisitions; descriptions of named special collections and deposited collections. Readership: Researchers, academic liaison librarians, and library managers. The Ashmolean, **The Whipple Museum of the History of Science** Joshua Nall, Liba Taub, Frances Willmoth, 2019-08-22 A window into cultures of scientific practice drawing on the collection of the Whipple Museum of the History of Science. This title is also available as Open Access on Cambridge Core. Robert T. Gunther Albert Everard Gunther, 1967 *The Making of the Oxford English Dictionary* Peter Gilliver, 2016-09-22 This book tells the history of the Oxford English Dictionary from its beginnings in the middle of the nineteenth century to the present. The author, uniquely among historians of the OED, is also a practising lexicographer with nearly thirty years' experience of working on the Dictionary. He has drawn on a wide range of sources, including previously unexamined archival material and eyewitness testimony, to create a detailed history of the project. The book explores the cultural background from which the idea of a comprehensive historical dictionary of English emerged; the lengthy struggles to bring this concept to fruition; and

the development of the book from the appearance of the first printed fascicle in 1884 to the launching of the Dictionary as an online database in 2000 and beyond It also examines the evolution of the lexicographers working methods and provides much information about the people many of them remarkable individuals who have contributed to the project over the last century and a half

Physics in Oxford, 1839-1939 Robert Fox, Graeme Gooday, 2005-06-16 Physics in Oxford 1839 1939 offers a challenging new interpretation of pre war physics at the University of Oxford which was far more dynamic than most historians and physicists have been prepared to believe It explains on the one hand how attempts to develop the University's Clarendon Laboratory by Robert Clifton Professor of Experimental Philosophy from 1865 to 1915 were thwarted by academic politics and funding problems and latterly by Clifton's idiosyncratic concern with precision instrumentation Conversely by examining in detail the work of college fellows and their laboratories the book reconstructs the decentralized environment that allowed physics to enter on a period of conspicuous vigour in the late nineteenth and early twentieth centuries especially at the characteristically Oxonian intersections between physics physical chemistry mechanics and mathematics Whereas histories of Cambridge physics have tended to focus on the self sustaining culture of the Cavendish Laboratory it was Oxford's college trained physicists who enabled the discipline to flourish in due course in university as well as college facilities notably under the newly appointed professors J S E Townsend from 1900 and F A Lindemann from 1919 This broader perspective allows us to understand better the vitality with which physicists in Oxford responded to the demands of wartime research on radar and techniques relevant to atomic weapons and laid the foundations for the dramatic post war expansion in teaching and research that has endowed Oxford with one of the largest and most dynamic schools of physics in the world

In Synchrony with the Heavens, Volume 2 Instruments of Mass Calculation David King, 2005-06-01 This is the first investigation of one of the main interests of astronomy in Islamic civilization namely timekeeping by the sun and stars and the regulation of the astronomically defined times of Muslim prayer The study is based on over 500 medieval astronomical manuscripts first identified by the author now preserved in libraries all over the world and originally from the entire Islamic world from the Maghrib to Central Asia and the Yemen The materials presented provide new insights into the early development of the prayer ritual in Islam They also call into question the popular notion that religion could not inspire serious scientific activity Only one of the hundreds of astronomical tables discussed here was known in medieval Europe which is one reason why the entire corpus has remained unknown until the present A second volume also to be published by Brill deals with astronomical instruments for timekeeping and other computing devices
