Applied Statistical Modelling for Ecologists Marc Kéry, Kenneth F. Kellner, 2024-07-18 2025 PROSE Award Finalist in Environmental Science Applied Statistical Modelling for Ecologists provides a gentle introduction to the essential models of applied statistics linear models generalized linear models mixed and hierarchical models All models are fit with both a likelihood and a Bayesian approach using several powerful software packages widely used in research publications JAGS NIMBLE Stan and TMB In addition the foundational method of maximum likelihood is explained in a manner that ecologists can really understand This book is the successor of the widely used Introduction to WinBUGS for Ecologists Kéry Academic Press 2010 Like its parent it is extremely effective for both classroom use and self study allowing students and researchers alike to quickly learn understand and carry out a very wide range of statistical modelling tasks The examples in Applied Statistical Modelling for Ecologists come from ecology and the environmental sciences but the underlying statistical models are very widely used by scientists across many disciplines This book will be useful for anybody who needs to learn and quickly become proficient in statistical modelling with either a likelihood or a Bayesian focus and in

the model fitting engines covered including the three latest packages NIMBLE Stan and TMB Contains a concise and gentle introduction to probability and applied statistics as needed in ecology and the environmental sciences Covers the foundations of modern applied statistical modelling Gives a comprehensive applied introduction to what currently are the most widely used and most exciting cutting edge model fitting software packages JAGS NIMBLE Stan and TMB Provides a highly accessible applied introduction to the two dominant methods of fitting parametric statistical models maximum likelihood and Bayesian posterior inference Details the principles of model building model checking and model selection Adopts a Rosetta Stone approach wherein understanding of one software and of its associated language will be greatly enhanced by seeing the analogous code in other engines Provides all code available for download for students at <https://www.elsevier.com/books-and-journals/book-companion/9780443137150> **Statistical Analysis of Network Data** Eric D. Kolaczyk, 2009-04-20 In recent

years there has been an explosion of network data that is measurements that are either of or from a system conceptualized as a network from seemingly all corners of science The combination of an increasingly pervasive interest in scientific analysis at a systems level and the ever growing capabilities for high throughput data collection in various fields has fueled this trend Researchers from biology and bioinformatics to physics from computer science to the information sciences and from economics to sociology are more and more engaged in the collection and statistical analysis of data from a network centric perspective Accordingly the contributions to statistical methods and modeling in this area have come from a similarly broad spectrum of areas often independently of each other Many books already have been written addressing network data and network problems in specific individual disciplines However there is at present no single book that provides a modern treatment of a core body of knowledge for statistical analysis of network data that cuts across the various disciplines and is organized rather according to a statistical taxonomy of tasks and techniques This book seeks to fill that gap and as such it aims to contribute to a growing trend in recent years to facilitate the exchange of knowledge across the pre-existing boundaries between those disciplines that play a role in what is coming to be called network science **Propensity Score**

Methods and Applications Haiyan Bai, M. H. Clark, 2018-11-20 A concise introductory text Propensity Score Methods and Applications describes propensity score methods PSM and how they are used to balance the distributions of observed covariates between treatment conditions as a means to reduce selection bias This new QASS title specifically focuses on the procedures of implementing PSM for research in social sciences instead of merely demonstrating the effectiveness of the method Using succinct and approachable language to introduce the basic concepts of PSM authors Haiyan Bai and M H Clark present basic concepts assumptions procedures available software packages and step by step examples for implementing PSM using real world data with exercises at the end of each chapter allowing readers to replicate examples on their own *Applied Statistics for the Social and Health Sciences* Rachel A. Gordon, 2012-07-26 Applied Statistics for the Social and Health Sciences provides graduate students in the social and health sciences with the basic skills that they need

to estimate interpret present and publish statistical models using contemporary standards The book targets the social and health science branches such as human development public health sociology psychology education and social work in which students bring a wide range of mathematical skills and have a wide range of methodological affinities For these students a successful course in statistics will not only offer statistical content but will also help them develop an appreciation for how statistical techniques might answer some of the research questions of interest to them This book is for use in a two semester graduate course sequence covering basic univariate and bivariate statistics and regression models for nominal and ordinal outcomes in addition to covering ordinary least squares regression Key features of the book include interweaving the teaching of statistical concepts with examples developed for the course from publicly available social science data or drawn from the literature thorough integration of teaching statistical theory with teaching data processing and analysis teaching of both SAS and Stata side by side and use of chapter exercises in which students practice programming and interpretation on the same data set and course exercises in which students can choose their own research questions and data set This book is for a two semester course For a one semester course see <http://www.routledge.com/9780415991544>
