Satellite Down:

   Down to Earth Lisa Parks,James Schwoch,2012-06-13 Down to Earth presents the first comprehensive overview of the geopolitical maneuvers financial investments technological innovations and ideological struggles that take place behind the scenes of the satellite industry Satellite projects that have not received extensive coverage microsatellites in China WorldSpace in South Africa SiriusXM the failures of USA 193 and Cosmos 954 and Iridium are explored This collection takes readers on a voyage through a truly global industry from the sites where satellites are launched to the corporate clean rooms where they are designed and along the orbits and paths that satellites traverse Combining a practical introduction to the mechanics of the satellite industry a history of how its practices and technologies have evolved and a sophisticated theoretical analysis of satellite cultures Down to Earth opens up a new space for global media studies   **Down to Earth** National Research Council,Division on Earth and Life Studies,Board on Earth Sciences and Resources,Mapping Science Committee,Committee on Geography,Committee on the Geographic Foundation for Agenda 21,2002-10-24 In 1992 world leaders adopted Agenda 21 the work program of the 1992 U N Conference on Environment and Development This landmark event provided a political foundation and action items to facilitate the global transition toward sustainable development The international community marked the tenth anniversary of this conference in Johannesburg South Africa in August 2002 Down to Earth a component of the U S State Department s Geographic Information for Sustainable Development project for the World Summit focuses on sub Saharan Africa with examples drawn from case study regions where the U S Agency for International Development and other agencies have broad experience Although African countries are the geographic focus of the study the report has broader applicability Down to Earth summarizes the importance and applicability of geographic data for sustainable development and draws on experiences in African countries to examine how future sources and applications of geographic data could provide reliable support to decision makers as they work towards sustainable development The committee emphasizes the potential of new technologies such as satellite remote sensing systems and geographic information systems that have revolutionized data collection and analysis over the last decade   **Getting Down to Earth** World Bank,2022-01-14 Outdoor air pollution accounts for an estimated 4 2 million deaths worldwide the majority of which are caused by exposure to fine particulate matter or PM2 5 air pollution Most of these deaths occur in low and middle income countries LMICs Reducing PM2 5 air pollution is thus crucial for improving public health outcomes in those countries Measuring and reducing the health impacts of PM2 5 is especially challenging in many LMICs because ground level air quality monitoring networks are typically nonexistent Where they are in place they are often not properly operated and maintained and are thus unreliable Limited local expertise in air quality measurement presents additional challenges These shortcomings can undermine a country s ability to design and implement effective policies to improve outdoor air quality Satellite technology has been used successfully for measuring air quality in high income countries where operation of ground

level air quality monitoring networks is well established However Getting Down to Earth Are Satellites Reliable for Measuring Air Pollutants That Cause Mortality in Low and Middle Income Countries investigates the performance of satellites in LMICs for predicting outdoor concentrations of PM2 5 based on case studies in nine cities in different regions representing a range of environmental conditions including mountainous dusty and coastal The report finds that the satellite derived estimates of PM2 5 in LMICs are associated with very large uncertainty ranging from 21 percent to 85 percent depending on the model used for translating satellite measurements of aerosol optical depth the parameter measured by satellites to surface level outdoor PM2 5 concentrations This report shows that satellites are unreliable for estimating ambient concentrations of PM2 5 in LMICs Furthermore satellite derived measurements cannot replace properly operated and maintained ground level monitoring networks for measuring the concentrations of PM2 5 that human beings are typically exposed to daily Thus it is important that LMICs strengthen support for the establishment of ground level monitoring networks to measure air pollutants notably PM2 5 that cause mortality in Sub Saharan Africa and other regions with LMICs
