Ecosystem Services in the Gariep Basin Erin Bohensky, Belinda Reyer, Albert van Jaarsveld, 2004-09-01 This assessment

report is a component of the multiple scale southern African sub global assessment SAfMA which investigated the condition and trends of ecosystem services and human well being in the Gariep basin from 1993 to 2003 as well as future scenarios and possible responses to ecosystem change The assessment features highlights from four local scale assessments nested within the basin Sehlabathebe Great Fish River Richtersveld and the Gauteng Province

Ecosystems of Disturbed Ground L.R. Walker,1999-12-17 As the human population inexorably grows its cumulative impact on the Earth's resources is hard to ignore The ability of the Earth to support more humans is dependent on the ability of humans to manage natural resources wisely Because disturbance alters resource levels effective management requires understanding of the ecology of disturbance This book is the first to take a global approach to the description of both natural and anthropogenic disturbance regimes that physically impact the ground Natural disturbances such as erosion volcanoes wind herbivory flooding and drought plus anthropogenic disturbances such as forestry grazing mining urbanization and military actions are considered Both disturbance impacts and the biotic recovery are addressed as well as the interactions of different types of disturbance Other chapters cover processes that are important to the understanding of disturbance of all types including soil processes nutrient cycles primary productivity succession animal behaviour and competition Humans react to disturbances by avoiding exacerbating or restoring them or by passing environmental legislation All of these issues are covered in this book Managers need better predictive models and robust data collections that help determine both site specific and generalized responses to disturbance Multiple disturbances have a complex effect on both physical and biotic processes as they interact This book provides a wealth of detail about the process of disturbance and recovery as well as a synthesis of the current state of knowledge about disturbance theory with extensive documentation

Applying Landscape Ecology in Biological Conservation Kevin Gutzwiller,2011-06-27 Landscape ecology and conservation biology are rapidly developing disciplines and a current synthesis of principles and applications in these two fields is needed under one cover Many managers are not applying principles of landscape ecology in efforts to conserve biota yet the loss of biological diversity could be reduced if broad scale processes and patterns were consistently considered in management and conservation decisions Bringing together insights from leaders in landscape ecology and conservation biology this book explains how our knowledge about landscape ecology can help us understand manage and maintain biodiversity Beyond explaining pertinent concepts of landscape ecology and

biological conservation and describing examples of their use in management research and planning this book also distills principles for applying landscape ecology in conservation identifies gaps in current knowledge and provides research approaches to fill those voids The book is divided into five parts the first part introduces the book and discusses what landscape ecology is and why it is important to biological conservation The second deals with multiple scales connectivity and organism movement The third part discusses landscape change and how this affects biodiversity and the fourth part covers conservation planning The final part presents a synthesis that identifies overarching principles pervasive constraints and realistic prospects for applying landscape ecology in biological conservation Conservationists land use planners and ecologists will find this book to be an essential resource Foreword by Richard T T Forman **Placing Nature** Joan Nassauer, 2013-02-22 Landscape ecology is a widely influential approach to looking at ecological function at the scale of landscapes and accepting that human beings powerfully affect landscape pattern and function It goes beyond investigation of pristine environments to consider ecological questions that are raised by patterns of farming forestry towns and cities Placing Nature is a groundbreaking volume in the field of landscape ecology the result of collaborative work among experts in ecology philosophy art literature geography landscape architecture and history Contributors asked each other What is our appropriate role in nature How are assumptions of Western culture and ingrained traditions placed in a new context of ecological knowledge In this book they consider the goals and strategies needed to bring human dominated landscapes into intentional relationships with nature articulating widely varied approaches to the task In the essays novelist Jane Smiley ecologist Eville Gorham and historian Curt Meine each examine the urgent realities of fitting together ecological function and culture philosopher Marcia Eaton and landscape architect Joan Nassauer each suggest ways to use the culture of nature to bring ecological health into settled landscapes urban geographer Judith Martin and urban historian Sam Bass Warner geographer and landscape architect Deborah Karasov and ecologist William Romme each explore the dynamics of land development decisions for their landscape ecological effects artist Chris Faust's photographs juxtapose the crass and mundane details of land use with the poetic power of ecological pattern Every possible future landscape is the embodiment of some human choice Placing Nature provides important insight for those who make such choices ecologists ecosystem managers watershed managers conservation biologists land developers designers planners and for all who wish to promote the ecological health of their communities *Routledge Handbook of Ecotourism* David A. Fennell, 2021-09-21 This handbook presents a timely broad ranging and provocative overview of the essential nature of ecotourism The chapters will both advance the existing central themes of ecotourism and provide challenging and divergent observations that will thrust ecotourism into new areas of research policy and practice The volume is arranged around four key themes sustainability ethics and identity change conflict and consumption and environment and learning with a total of 28 chapters The first section focuses on sustainability as a core ecotourism criterion with a primary focus on some of the macro sustainability

issues that have an impact on ecotourism Foremost among these topics is the linkage to the UN's Sustainable Development Goals which have relevance to ecotourism as one of the greenest or most responsible forms of tourism The chapters in the second section provide a range of different topics that pull ecotourism research into new directions including a chapter on enriching indigenous ecotourism through culturally sensitive universalism The third section includes chapters on topics ranging from persons with disabilities as a neglected body of research in ecotourism to ecotourism as a form of luxury consumption The final section emphasises the link between ecotourism and learning about the natural world including a deeply theoretical chapter on rewilding Europe With contributions from authors around the world this handbook gives a global platform to local voices in both developed and emerging country contexts The multidisciplinary and international Routledge Handbook of Ecotourism will be of great interest to researchers students and practitioners working in tourism and sustainability

Ecosystem Management Mark S. Boyce, Alan W. Haney, 1997-01-01 Until recently natural resource management of such commodities as timber and wildlife was driven largely by the desire to exploit these resources During the past three decades however ecologists have warned that this approach to natural resource management could have unforeseen consequences because it ignored how ecosystems function within the landscape Federal agencies that oversee forest and wildlife resources have begun to implement different schemes of ecosystem management schemes that vary enormously among agencies Contributors to this volume leading experts who are agency personnel as well as researchers now clarify the key elements of sound ecosystem management and offer prescriptions for implementing them The authors discuss definitions of ecosystem management sustainability of ecological systems landscape ecology resource management at different scales and in an ecosystem context new advances in computer technology that facilitate classification schemes for ecosystems ecosystem restoration biological diversity and public concerns Throughout the experts agree that management practices must be sustainable that production of commodities such as amenities as recreation and aesthetics and biodiversity must not be allowed to decline over time
