How to Save the World from Ourselves** Saygin Celen, Existential Threat Climate change is the biggest existential crisis that humankind has faced In the last 100 years we have ruined the carbon cycle using fossil fuels namely coal petroleum and natural gas to build our civilization not taking into account the catastrophic impacts of climate change can cause We are already seeing a record of floods hurricanes wildfires and droughts since the temperature rise is already at 1.5 degrees Celsius We need to reduce our greenhouse effect by half by 2030 and reach the zero carbon economy by 2050 to limit the temperature rise to 2 degrees Celsius Even though our lives depend on it most of us don't know about the causes and how we will be able to tackle this existential threat This book gives you alternative answers on what steps governments companies and individuals need to take Greenhouse Effects and Global Warming According to Elon Musk Ruining the carbon cycle is the dumbest experiment in history Life on earth built its balance in 4.5 billion years and human induced fossil fuel emissions caused the carbon dioxide density to increase from 300 to 420 ppm in less than 100 years resulting in the heat to be trapped in the atmosphere and the average temperature to increase 1.5 degrees Celsius We need to keep it at 2 degrees Celsius level The Biggest Opportunity We are at a turning point Climate change solutions also make economical sense which is what governments and corporations are completely aware Now is the time to phase out the fossil fuel production and consumption and gain full momentum to the green zero carbon economy such as geothermal wind power solar electricity nuclear fusion and biomass Fortunately renewable sources along with the available technologies and upcoming innovations are all in line to create the sustainable future economy Successful Models Arguably the biggest challenge that the humanity has ever overcome as one species is the Ozone depletion through the Montreal Protocol which was signed by 197 countries Now the Ozone layer is fully recovering as chlorofluorocarbons are banned by all countries and it's estimated to fully recover by 2050 The Montreal Treaty and other successful technologies and innovations can be used as a success model that also represents what we are able to achieve when we unite The New Economy It's inevitable that we will be feeling the impacts of climate change for the decades to come since we keep filling the atmosphere with greenhouse gases However we have every reason to be extremely hopeful since all the countries signed the Paris Agreement they come together each year to improve the progress via COP meetings and we have new and

upcoming technologies such as Tokamak nuclear fusion solid state batteries complete electrification of vehicles and concentrated solar power that can realize the zero carbon economy by the 2050 deadline Learn what climate change exactly is and how we will be able to tackle it in the next few decades This book will bring you the information and insight for you to see how governments companies and individuals can take orchestrated actions

Climate Crisis, Psychoanalysis, and Radical Ethics Donna M. Orange, 2016-09-13. Psychoanalysis engages with the difficult subjects in life, but it has been slow to address climate change. *Climate Crisis: Psychoanalysis and Radical Ethics* draws on the latest scientific evidence to set out the likely effects of climate change on politics, economics, and society more generally, including impacts on psychoanalysts. Despite a tendency to avoid the warnings, times of crisis summon clinicians to emerge from comfortable consulting rooms. Daily engaged with human suffering, they now face the inextricably bound-together crises of global warming and massive social injustices. After considering historical and emotional causes of climate unconsciousness and of compulsive consumerism, this book argues that only a radical ethics of responsibility to be my other's keeper will truly wake us up to climate change and bring psychoanalysts to actively take on responsibilities such as demanding change from governments, living more simply, flying less, and caring for the earth and its inhabitants everywhere. Linking climate justice to radical ethics by way of psychoanalysis, Donna Orange explores many relevant aspects of psychoanalytic expertise, referring to work on trauma, mourning, and the transformation of trouble into purpose. Orange makes practical suggestions for action in the psychoanalytic and psychotherapeutic communities: reducing air travel, consolidating organizations and conferences, better use of internet communication and education. This book includes both philosophical considerations of egoism, close to psychoanalytic narcissism, as problematic together with work on shame and envy, as motivating compulsive and conspicuous consumption. The interweaving of climate emergency and massive social injustice presents psychoanalysts and organized psychoanalysis with a radical ethical demand and an extraordinary opportunity for leadership. *Climate Crisis: Psychoanalysis and Radical Ethics* will provide accessible and thought-provoking reading for psychoanalysts and psychotherapists, as well as philosophers, environmental studies scholars, and students studying across these fields.
