**Nitride Semiconductors and Devices** Hadis Morkoç, 2013-03-08 A View of the Past and a Look into the Future by a Pioneer By Jacques I Pankove This forward will be a brief review of important developments in the early and recent history of gallium nitride and also a perspective on the current and future evolution of this exciting field Gallium nitride GaN was synthesized more than 50 years ago by Johnson et al 1 in 1932 and also by Juza and Hahn 2 in 1938 who passed ammonia over hot gallium This method produced small needles and platelets The purpose of Juza and Hahn was to investigate the crystal structure and lattice constant of GaN as part of a systematic study of many compounds Two decades later Grim al 3 in 1959 employed the same technique to produce small crystals of GaN for the purpose of measuring their photoluminescence spectra Another decade later Maruska and Tietjen 4 in 1969 used a chloride transport vapor technique to make a large area layer of GaN on sapphire All of the GaN made at that time was very

conducting n type even when not deliberately doped The donors were believed to be nitrogen vacancies Later this model was questioned by Seifert et al 5 in 1983 and oxygen was proposed as the donor Oxygen with its 6 valence electrons on a N site N has 5 posed valence electrons would be a single donor
