    **Semigroups in Geometrical Function Theory** D. Shoikhet,2013-03-09 Historically complex analysis and geometrical function theory have been inten sively developed from the beginning of the twentieth century They provide the foundations for broad areas of mathematics In the last fifty years the theory of holomorphic mappings on complex spaces has been studied by many mathemati cians with many applications to nonlinear analysis functional analysis differential equations classical and quantum mechanics The laws of dynamics are usually presented as equations of motion which are written in the abstract form of a dy namical system dx dt f x 0 where x is a variable describing the state of the system under study and f is a vector function of x The study of such systems when f is a monotone or an accretive generally nonlinear operator on the under lying space has been recently the subject of much research by analysts working on quite a variety of interesting topics including boundary value problems integral equations and evolution problems see for example 19 13 and 29 In a parallel development and even earlier the generation theory of one parameter semigroups of holomorphic mappings in en has been the topic of interest in the theory of Markov stochastic processes and in particular in the theory of branching processes see for example 63 127 48 and 69     **Geometric Function Theory in Several Complex Variables** Carl H. FitzGerald,Sheng Gong,2004 The papers contained in this book address problems in one and several complex variables The main theme is the extension of geometric function theory methods and theorems to several complex variables The papers present various results on the growth of mappings in various classes as well as observations about the boundary behavior of mappings via developing and using some semi group methods     Geometric Function Theory in One and Higher Dimensions Ian Graham,2003-03-18 This reference details valuable results that lead to improvements in existence theorems for the Loewner differential equation in higher dimensions discusses the compactness of the analog of the Caratheodory class in several variables and studies various classes of univalent mappings according to their geometrical definitions It introduces the in

    **Geometric Function Theory In Several Complex Variables, Proceedings Of A Satellite Conference To The Int'l Congress Of Mathematicians In Beijing 2002** Sheng Gong,Carl H Fitzgerald,2004-09-23 The papers contained in this book address problems in one and several complex variables The main theme is the extension of geometric function theory methods and theorems to several complex variables The papers present various results on the growth of mappings in various classes as well as observations about the boundary behavior of mappings via developing and using some semi group methods

    Geometric Function Theory in Higher Dimension Filippo Bracci,2018-03-24 The book collects the most relevant outcomes from the INdAM Workshop Geometric Function Theory in Higher Dimension held in Cortona on September 5 9 2016 The Workshop was mainly devoted to discussions of basic open problems in the area and this volume follows the same line In particular it offers a selection of original contributions on Loewner theory in one and higher dimensions semigroups theory iteration theory and related topics Written by experts in geometric function theory in one and several complex variables it

focuses on new research frontiers in this area and on challenging open problems The book is intended for graduate students and researchers working in complex analysis several complex variables and geometric function theory **Geometric Function Theory and Non-linear Analysis** Tadeusz Iwaniec,Gaven Martin,2001 This unique book explores the connections between the geometry of mappings and many important areas of modern mathematics such as Harmonic and non linear Analysis the theory of Partial Differential Equations Conformal Geometry and Topology Much of the book is new It aims to provide students and researchers in many areas with a comprehensive and up to date account and an overview of the subject as a whole **Semigroups and Geometric Function Theory in J\*-algebras** Alexander Goldvard,Ţekhniyon, Makhon ţekhnologi le-Yiśra'el. Fakultah le-matematikah,2007 Nonlinear Semigroups, Fixed Points, and Geometry of Domains in Banach Spaces Simeon Reich,David Shoiykhet,2005 Nonlinear semigroup theory is not only of intrinsic interest but is also important in the study of evolution problems In the last forty years the generation theory of flows of holomorphic mappings has been of great interest in the theory of Markov stochastic branching processes the theory of composition operators control theory and optimization It transpires that the asymptotic behavior of solutions to evolution equations is applicable to the study of the geometry of certain domains in complex spaces Readers are provided with a systematic overview of many results concerning both nonlinear semigroups in metric and Banach spaces and the fixed point theory of mappings which are nonexpansive with respect to hyperbolic metrics in particular holomorphic self mappings of domains in Banach spaces The exposition is organized in a readable and intuitive manner presenting basic functional and complex analysis as well as very recent developments Contents Mappings in Metric and Normed Spaces Differentiable and Holomorphic Mappings in Banach Spaces Hyperbolic Metrics on Domains in Complex Banach Spaces Some Fixed Point Principles The DenjoyOCoWolff Fixed Point Theory Generation Theory for One Parameter Semigroups Flow Invariance Conditions Stationary Points of Continuous Semigroups Asymptotic Behavior of Continuous Flows Geometry of Domains in Banach Spaces **Geometric Function Theory and Applications of Complex Analysis to Mechanics** Reiner Kühnau,1991 **Semigroup Theory and Its Applications** Alfred Hoblitzelle Clifford,1996-05-16 This volume contains survey papers by the invited speakers at the Conference on Semigroup Theory and Its Applications which took place at Tulane University in April 1994 The authors represent the leading areas of research in semigroup theory and its applications both to other areas of mathematics and to areas outside mathematics Included are papers by Gordon Preston surveying Clifford s work on Clifford semigroups and by John Rhodes tracing the influence of Clifford s work on current semigroup theory Notable among the areas of application are the paper by Jean Eric Pin on applications of other areas of mathematics to semigroup theory and the paper by the editors on an application of semigroup theory to theoretical computer science and mathematical logic All workers in semigroup theory will find this volume invaluable **Harmonic and Complex Analysis and its Applications** Alexander Vasil'ev,2013-11-09 This volume highlights the main results of the research performed within the network Harmonic and Complex Analysis and

**Continuous Semigroups of Holomorphic Self-maps of the Unit Disc** Filippo Bracci,Manuel D. Contreras,Santiago Díaz-Madrigal,2020-02-14 The book faces the interplay among dynamical properties of semigroups analytical properties of infinitesimal generators and geometrical properties of Koenigs functions The book includes precise descriptions of the behavior of trajectories backward orbits petals and boundary behavior in general aiming to give a rather complete picture of all interesting phenomena that occur In order to fulfill this task we choose to introduce a new point of view which is mainly based on the intrinsic dynamical aspects of semigroups in relation with the hyperbolic distance and a deep use of Carath odory prime ends topology and Gromov hyperbolicity theory This work is intended both as a reference source for researchers interested in the subject and as an introductory book for beginners with a undergraduate background in real and complex analysis For this purpose the book is self contained and all non standard and mostly all standard results are proved in details
