

The membership problem in matrix semigroups

Given a finite set of matrices $G = \{M_1, M_2, \dots, M_k\}$ and a matrix M . Determine whether there exists a sequence of matrices $M_{i_1}, M_{i_2}, \dots, M_{i_l}$ from G such that $M_{i_1} \times M_{i_2} \times \dots \times M_{i_l} = M$

In other words, Let S be a given finitely generated semigroup of $n \times n$ matrices from $Z^{n \times n}$ ($Q^{n \times n}$). Determine whether a matrix M belongs to S .

The motrality (membership for the zero matrix) is undecidable for 3x3 matrices. [M.Paterson]

Semigroups Of Matrices:

Semigroups Of Matrices Jan Okninski, 1998-07-31 This book is concerned with the structure of linear semigroups that is subsemigroups of the multiplicative semigroup $M_n(K)$ of $n \times n$ matrices over a field K or more generally skew linear semigroups if K is allowed to be a division ring and its applications to certain problems on associative algebras semigroups and linear representations It is motivated by several recent developments in the area of linear semigroups and their applications It summarizes the state of knowledge in this area presenting the results for the first time in a unified form The book's point of departure is a structure theorem which allows the use of powerful techniques of linear groups Certain aspects of a combinatorial nature connections with the theory of linear representations and applications to various problems on associative algebras are also discussed

Probability Measures on Semigroups Göran Högnäs, Arunava Mukherjee, 2010-11-02 This second edition presents up to date material on the theory of weak convergence of convolution products of probability measures in semigroups the theory of random walks on semigroups and their applications to products of random matrices In addition this unique work examines the essentials of abstract semigroup theory and its application to concrete semigroups of matrices This substantially revised text includes exercises at various levels at the end of each section and includes the best available proofs on the most important theorems used in a book making it suitable for a one semester course on semigroups In addition it could also be used as a main text or supplementary material for courses focusing on probability on algebraic structures or weak convergence This book is ideally suited to graduate students in mathematics and students in other fields such as engineering and the sciences with an interest in probability Students in statistics using advanced probability will also find this book useful

Semigroups of Matrices Lawrence John Huber, 1962

Probability Measures on Semigroups: Convolution Products, Random Walks and Random Matrices Göran Högnäs, Arunava Mukherjee, 2013-03-09 A Scientific American article on chaos see Crutchfield et al 1986 illustrates a very persuasive example of recurrence A painting of Henri Poincaré or rather a digitized version of it is stretched and cut to produce a mildly distorted image of Poincaré The same procedure is applied to the distorted image and the process is repeated over and over again on the successively more and more blurred images After a dozen repetitions

nothing seems to be left of the original portrait Miraculously structured images appear briefly as we continue to apply the distortion procedure to successive images After 241 iterations the original picture reappears unchanged Apparently the pixels of the Poincare portrait were moving about in accordance with a strictly deterministic rule More importantly the set of all pixels the whole portrait was transformed by the distortion mechanism In this example the transformation seems to have been a reversible one since the original was faithfully recreated It is not very farfetched to introduce a certain amount of randomness and irreversibility in the above example Think of a random miscoloring of some pixels or of inadvertently giving a pixel the color of its neighbor The methods in this book are geared towards being applicable to the asymptotics of such transformation processes The transformations form a semigroup in a natural way we want to investigate the long term behavior of random elements of this semigroup

The Algebraic Theory of Semigroups, Volume I Alfred H. Clifford, G. B. Preston, 1961-12-31 The material in this volume was presented in a second year graduate course at Tulane University during the academic year 1958-1959 The book aims at being largely self contained but it is assumed that the reader has some familiarity with sets mappings groups and lattices Only in Chapter 5 will more preliminary knowledge be required and even there the classical definitions and theorems on the matrix representations of algebras and groups are summarized
