## **Semilinear Schrodinger Equations:**

**Semilinear Schrodinger Equations** Thierry Cazenave, 2003 The nonlinear Schrodinger equation has received a great deal of attention from mathematicians particularly because of its applications to nonlinear optics This book presents various mathematical aspects of the nonlinear Schrodinger equation It studies both problems of local nature and problems of global nature

**Bound States for Semilinear Schrödinger Equations with Sign-changing Potential**, 2005 **Solutions of Semilinear Schrödinger Equations in  $H^s$**  Hartmut Pecher, 1996 Schrödinger Equations in Nonlinear Systems Wu-Ming Liu, Emmanuel Kengne, 2019-03-20 This book explores the diverse types of Schrödinger equations that appear in nonlinear systems in general with a specific focus on nonlinear transmission networks and Bose Einstein Condensates In the context of nonlinear transmission networks it employs various methods to rigorously model the phenomena of modulated matter wave propagation in the network leading to nonlinear Schrödinger NLS equations Modeling these phenomena is largely based on the reductive perturbation method and the derived NLS equations are then used to methodically investigate the dynamics of matter wave solitons in the network In the context of Bose Einstein condensates BECs the book analyzes the dynamical properties of NLS equations with the external potential of different types which govern the dynamics of modulated matter waves in BECs with either two body interactions or both two and three body interatomic interactions It also discusses the method of investigating both the well posedness and the ill posedness of the boundary problem for linear and nonlinear Schrödinger equations and presents new results Using simple examples it then illustrates the results on the boundary problems For both nonlinear transmission networks and Bose Einstein condensates the results obtained are supplemented by numerical calculations and presented as figures

**Defocusing Nonlinear Schrödinger Equations** Benjamin Dodson, 2019-03-28 Explores Schrödinger equations with power type nonlinearity with scattering results for mass and energy critical Schrödinger equations Evolution Equations of Hyperbolic and Schrödinger Type Michael Ruzhansky, Mitsuru Sugimoto, Jens Wirth, 2012-08-04 Evolution equations of hyperbolic or more general parabolic type form an active field of current research This volume aims to collect some recent advances in the area in order to allow a quick overview of ongoing research The contributors are first rate mathematicians This collection of research papers is centred around parametrix constructions and microlocal analysis asymptotic constructions of solutions energy and dispersive estimates and associated spectral transforms Applications concerning elasticity and general relativity complement the volume The book gives an overview of a variety of ongoing current research in the field and therefore allows researchers as well as students to grasp new aspects and broaden their understanding of the area

*A Semilinear Schrödinger Equation in the Presence of a Magnetic Field* Andrzej Szulkin, 2002 *The Nonlinear Schrödinger Equation* Catherine Sulem, Pierre-Louis Sulem, 2007-06-30 Filling the gap between the mathematical literature and applications to domains the authors have chosen to address the problem of wave collapse by several methods ranging from rigorous mathematical analysis to formal asymptotic

expansions and numerical simulations      *Global Solutions of Nonlinear Schrödinger Equations* Jean Bourgain, 1999 This volume presents recent progress in the theory of nonlinear dispersive equations primarily the nonlinear Schrödinger NLS equation The Cauchy problem for defocusing NLS with critical nonlinearity is discussed New techniques and results are described on global existence and properties of solutions with Large Cauchy data Current research in harmonic analysis around Strichartz's inequalities and its relevance to nonlinear PDE is presented and several topics in NLS theory on bounded domains are reviewed Using the NLS as an example the book offers comprehensive insight on current research related to dispersive equations and Hamiltonian PDEs      **Semi-classical Analysis For Nonlinear Schrödinger Equations: Wkb Analysis, Focal Points, Coherent States (Second Edition)**

Remi Carles, 2020-10-05 The second edition of this book consists of three parts The first one is dedicated to the WKB methods and the semi classical limit before the formation of caustics The second part treats the semi classical limit in the presence of caustics in the special geometric case where the caustic is reduced to a point or to several isolated points The third part is new in this edition and addresses the nonlinear propagation of coherent states The three parts are essentially independent Compared with the first edition the first part is enriched by a new section on multiphase expansions in the case of weakly nonlinear geometric optics and an application related to this study concerning instability results for nonlinear Schrödinger equations in negative order Sobolev spaces The third part is an overview of results concerning nonlinear effects in the propagation of coherent states in the case of a power nonlinearity and in the richer case of Hartree like nonlinearities It includes explicit formulas of an independent interest such as generalized Mehler's formula generalized lens transform      [Lecture Notes on Schrödinger Equations](#) Aleksandr Andreevich Pankov, 2007 CONTENTS Preface A Bit of Quantum Mechanics Operators in Hilbert Spaces Spectral Theorem for Self adjoint Operators Compact Operators and the Hilbert Schmidt Theorem Elements of Perturbation Theory Variational Principles One Dimensional Schrödinger Operator Multidimensional Schrödinger Operator Periodic Schrödinger Operator Quantum Graphs Non linear Schrödinger Equation References Index      *Existence and Gap Bifurcation of Multiple Solutions of Semilinear Schrödinger Equations* Tobias Weth, 1998      **Nonlinear Fractional Schrödinger Equations in  $\mathbb{R}^N$**

Vincenzo Ambrosio, 2021-04-19 This monograph presents recent results concerning nonlinear fractional elliptic problems in the whole space More precisely it investigates the existence multiplicity and qualitative properties of solutions for fractional Schrödinger equations by applying suitable variational and topological methods The book is mainly intended for researchers in pure and applied mathematics physics mechanics and engineering However the material will also be useful for students in higher semesters and young researchers as well as experienced specialists working in the field of nonlocal PDEs This is the first book to approach fractional nonlinear Schrödinger equations by applying variational and topological methods

**Geometric Numerical Integration and Schrödinger Equations** Erwan Faou, 2012 The goal of geometric numerical integration is the simulation of evolution equations possessing geometric properties over long periods of time Of particular

importance are Hamiltonian partial differential equations typically arising in application fields such as quantum mechanics or wave propagation phenomena. They exhibit many important dynamical features such as energy preservation and conservation of adiabatic invariants over long periods of time. In this setting a natural question is how and to which extent the reproduction of such long time qualitative behavior can be ensured by numerical schemes. Starting from numerical examples these notes provide a detailed analysis of the Schrödinger equation in a simple setting: periodic boundary conditions, polynomial nonlinearities approximated by symplectic splitting methods. Analysis of stability and instability phenomena induced by space and time discretization are given and rigorous mathematical explanations are provided for them. The book grew out of a graduate level course and is of interest to researchers and students seeking an introduction to the subject matter.

**Lagrangian and Hamiltonian Methods for Nonlinear Control** 2003 A Astolfi, Francisco Gordillo, A J Van Der Schaft, 2003-10-07 This is the second of a series of IFAC Workshops initiated in 2000. The first one chaired and organized by Profs N Leonard and R Ortega was held in Princeton in March 2000. This proceedings volume looks at the role played by Lagrangian and Hamiltonian methods in disciplines such as classical mechanics, quantum mechanics, fluid dynamics, electrodynamics, celestial mechanics and how such methods can be practically applied in the control community. Presents and illustrates new approaches to nonlinear control that exploit the Lagrangian and Hamiltonian structure of the system to be controlled. Highlights the important role of Lagrangian and Hamiltonian Structures as design methods.

**Invariant Measures for Stochastic Nonlinear Schrödinger Equations** Jialin Hong, Xu Wang, 2019-08-22 This book provides some recent advance in the study of stochastic nonlinear Schrödinger equations and their numerical approximations including the well posedness, ergodicity, symplecticity and multi symplecticity. It gives an accessible overview of the existence and uniqueness of invariant measures for stochastic differential equations, introduces geometric structures including symplecticity and conformal multi symplecticity for nonlinear Schrödinger equations and their numerical approximations and studies the properties and convergence errors of numerical methods for stochastic nonlinear Schrödinger equations. This book will appeal to researchers who are interested in numerical analysis, stochastic analysis, ergodic theory, partial differential equation theory etc.

***An Introduction to Minimax Theorems and Their Applications to Differential Equations*** Maria do Rosário Grossinho, Stepan Agop Tersian, 2013-06-29 The book is intended to be an introduction to critical point theory and its applications to differential equations. Although the related material can be found in other books the authors of this volume have had the following goals in mind: To present a survey of existing minimax theorems; To give applications to elliptic differential equations in bounded domains; To consider the dual variational method for problems with continuous and discontinuous nonlinearities; To present some elements of critical point theory for locally Lipschitz functionals and give applications to fourth order differential equations with discontinuous nonlinearities; To study homoclinic solutions of differential equations via the variational methods. The contents of the book consist of seven chapters each one divided into

several sections Audience Graduate and post graduate students as well as specialists in the fields of differential equations
