Equations Herbert Amann, Wolfgang Arendt, Frank Neubrander, Serge Nicaise, Joachim Below, 2008-02-28 Gunter Lumer was an outstanding mathematician whose works have great influence on the research community in mathematical analysis and evolution equations He was at the origin of the breath taking development the theory of semigroups saw after the pioneering book of Hille and Phillips from 1957 This volume contains invited contributions presenting the state of the art of these topics and reflecting the broad interests of Gunter Lumer Potential Theory, Surveys and Problems Josef Kral, Jaroslav Lukes, Ivan Netuka, Jiri Vesely, 2007-02-08 The volume comprises eleven survey papers based on survey lectures delivered at the Conference in Prague in July 1987 which covered various facets of potential theory including its applications in other areas The survey papers deal with both classical and abstract potential theory and its relations to partial differential equations stochastic processes and other branches such as numerical analysis and topology A collection of problems from potential theory compiled on the occasion of the conference is included with additional commentaries in the second part of this volume

Functional Analysis and Approximation P.L. Butzer, E. Gärlich, B. Szökefalvi-Nagy, 2013-03-07 These Proceedings form a record of the lectures presented at the international Conference on Functional Analysis and Approximation held at the Oberwolfach Mathematical Research Institute August 9-16 1980 They include 33 of the 38 invited conference papers as well as three papers subsequently submitted in writing Further there is a report devoted to new and unsolved problems based on two special sessions of the conference The present volume is the sixth Oberwolfach Conference in Birkhäuser's ISNM series to be edited at Aachen It is once again devoted to more significant results obtained in the wide areas of approximation theory harmonic analysis functional analysis and operator theory during the past three years Many of the papers solicited not only outline fundamental advances in their fields but also focus on interconnections between the various research areas The papers in the present volume have been grouped into nine chapters Chapter I on operator theory deals with maps on positive semidefinite operators spectral bounds of semigroup operators evolution equations of diffusion type the spectral theory of propagators and generalized inverses Chapter II on functional analysis contains papers on modular approximation interpolation spaces and unconditional bases **Complex Potential Theory** Paul M. Gauthier, 2012-12-06 Proceedings of the NATO Advanced Study Institute and Séminaire de mathématiques supérieures Montréal Canada July 26-August 6 1993

Séminaire de Théorie du Potentiel, Paris, No. 6, 2006-11-14 **Value Distribution of Meromorphic Functions**

Jianhua Zheng, 2011-03-31 Value Distribution of Meromorphic Functions focuses on functions meromorphic in an angle or on the complex plane T-directions deficient values singular values potential theory in value distribution and the proof of the celebrated Nevanlinna conjecture The book introduces various characteristics of meromorphic functions and their connections several aspects of new singular directions new results on estimates of the number of deficient values new results

on singular values and behaviours of subharmonic functions which are the foundation for further discussion on the proof of the Nevanlinna conjecture The independent significance of normality of subharmonic function family is emphasized This book is designed for scientists engineers and post graduated students engaged in Complex Analysis and Meromorphic Functions Dr Jianhua Zheng is a Professor at the Department of Mathematical Sciences Tsinghua University China

Differential Geometry in the Large Heinz Hopf, 2013-11-11 These notes consist of two parts 1 Selected Topics in Geometry New York University 1946 Notes by Peter Lax 2 Lectures on Differential Geometry in the Large Stanford University 1956 Notes by J W Gray They are reproduced here with no essential change Heinz Hopf was a mathematician who recognized important mathematical ideas and new mathematical phenomena through special cases In the simplest background the central idea or the difficulty of a problem usually becomes crystal clear Doing geometry in this fashion is a joy Hopf's great insight allows this approach to lead to serious mathematics for most of the topics in these notes have become the starting points of important further developments I will try to mention a few It is clear from these notes that Hopf laid the emphasis on polyhedral differential geometry Most of the results in smooth differential geometry have polyhedral counterparts whose understanding is both important and challenging Among recent works I wish to mention those of Robert Connelly on rigidity which is very much in the spirit of these notes of R Connelly Conjectures and open questions in rigidity Proceedings of International Congress of Mathematicians Helsinki 1978 vol 1 407-414 A theory of area and volume of rectilinear polyhedra based on decompositions originated with Bolyai and Gauss

Function Spaces and Potential Theory David R. Adams, Lars I. Hedberg, 2012-12-06 Function spaces especially those spaces that have become known as Sobolev spaces and their natural extensions are now a central concept in analysis In particular they play a decisive role in the modern theory of partial differential equations PDE Potential theory which grew out of the theory of the electrostatic or gravitational potential the Laplace equation the Dirichlet problem etc had a fundamental role in the development of functional analysis and the theory of Hilbert space Later potential theory was strongly influenced by functional analysis More recently ideas from potential theory have enriched the theory of those more general function spaces that appear naturally in the study of nonlinear partial differential equations This book is motivated by the latter development The connection between potential theory and the theory of Hilbert spaces can be traced back to C F Gauss 181 who proved with modern rigor supplied almost a century later by O Frostman 158 the existence of equilibrium potentials by minimizing a quadratic integral the energy This theme is pervasive in the work of such mathematicians as D Hilbert Ch J de

La Vallee Poussin M Riesz O Frostman A Beurling and the connection was made particularly clear in the work of H Cartan 97 in the 1940 s In the thesis of J Deny 119 and in the subsequent work of J Deny and J L

Classical Fine Potential Theory
 Mohamed El Kadiri, Bent Fuglede, 2025-04-03 This comprehensive book explores the intricate realm of fine potential theory Delving into the real theory it navigates through harmonic and subharmonic functions addressing the famed Dirichlet problem within finely open sets of \mathbb{R}^n These sets are defined relative to the coarsest topology on \mathbb{R}^n ensuring the continuity of all subharmonic functions This theory underwent extensive scrutiny starting from the 1970s particularly by Fuglede within the classical or axiomatic framework of harmonic functions The use of methods from fine potential theory has led to solutions of important classical problems and has allowed the discovery of elegant results for extension of classical holomorphic function to wider classes of domains Moreover this book extends its reach to the notion of plurisubharmonic and holomorphic functions within plurifinely open sets of \mathbb{C}^n and its applications to pluripotential theory These open sets are defined by coarsest topology that renders all plurisubharmonic functions continuous on \mathbb{C}^n The presentation is meticulously crafted to be largely self contained ensuring accessibility for readers at various levels of familiarity with the subject matter Whether delving into the fundamentals or seeking advanced insights this book is an indispensable reference for anyone intrigued by potential theory and its myriad applications Organized into five chapters the first four unravel the intricacies of fine potential theory while the fifth chapter delves into plurifine pluripotential theory

Algebraic Potential Theory Maynard Arsove, Heinz Leutwiler, 1980 Global aspects of classical and axiomatic potential theory are developed in a purely algebraic way in terms of a new algebraic structure called a mixed lattice semigroup This generalizes the notion of a Riesz space vector lattice by replacing the usual symmetrical lower and upper envelopes by unsymmetrical mixed lower and upper envelopes formed relative to specific order on the first element and initial order on the second The treatment makes essential use of a calculus of mixed envelopes in which the main formulas

and inequalities are derived through the use of certain semigroups of nonlinear operators Techniques based on these operator semigroups are new even in the classical setting *Ring Theory, Antwerp 1980* F. van Oystaeyen, 2006-11-15
