Mathematicians in Bologna 1861-1960 Salvatore COEN,2012-05-11 The scientific personalities of Luigi Cremona Eugenio Beltrami Salvatore Pincherle Federigo Enriques Beppo Levi Giuseppe Vitali Beniamino Segre and of several other mathematicians who worked in Bologna in the century 1861 1960 are examined by different authors in some cases providing different view points Most contributions in the volume are historical they are reproductions of original documents or studies on an original work and its impact on later research The achievements of other mathematicians are investigated for their present day importance Algebraic K-Theory Michael R. Stein,2006-11-14 *The Logic of Provability* George Boolos,1995-04-28 Boolos a pre eminent philosopher of mathematics investigates the relationship between provability and modal logic The Jewish Mathematical Diaspora from Fascist Italy Erika Luciano,2025-08-04 Delving into previously undisclosed archival sources this monograph offers a meticulously researched portrayal of Italian Jewish mathematicians amidst the turmoil sparked by the 1938 Italian Racial Laws Forced migration due to fascist anti Semitism saw the exodus of numerous Jewish intellectuals Highlighting the experiences of select academic mathematicians such as Guido Fubini Gino Fano Beniamino Segre Alessandro Terracini and others who fled Italy this work casts a light on a diaspora that presents unique aspects thanks to pre existing networks of international scientific solidarity Despite challenges stemming from language society and institutions their narratives reveal the profound human dimensions of adversity choice and camaraderie Suitable for scholars and students of 20th century history as well as a wider audience intrigued by Italy s complex past these pages offer invaluable insights into a dark chapter of the country s history **Topological Rings** S. Warner,1993-07-07 This text brings the reader to the frontiers of current research in topological rings The exercises illustrate many results and theorems while a comprehensive bibliography is also included The book is aimed at those readers acquainted with some very basic point set topology and algebra as normally presented in semester courses at the beginning graduate level or even at the advanced undergraduate level Familiarity with Hausdorff metric compact and locally compact spaces and basic properties of continuous functions also with groups rings fields vector spaces and modules and with Zorn s Lemma is also expected Numerical Solution of Partial Differential Equations—III, SYNSPADE 1975 Bert Hubbard,2014-05-10 Numerical Solution of Partial Differential Equations III Synspade 1975 provides information pertinent to those difficult problems in partial differential equations exhibiting some type of singular behavior This book covers a variety of topics including the mathematical models and their relation to experiment as well as the behavior of solutions of the partial differential equations involved Organized into 16 chapters this book begins with an overview of elastodynamic results for stress intensity factors of a bifurcating crack This text then discusses the effects of nonlinearities such as bifurcation which occur in problems of

nonlinear mechanics Other chapters consider the equations of changing type and those with rapidly oscillating coefficients This book discusses as well the effective computational methods for numerical solutions The final chapter deals with the principal results on G convergence such as the convergence of the Green s operators for Dirichlet s and other boundary problems This book is a valuable resource for engineers and mathematicians *Image Analysis and Recognition* Aurélio Campilho,Fakhri Karray,2016-06-30 This book constitutes the thoroughly refereed proceedings of the 13th International Conference on Image Analysis and Recognition ICIAR 2016 held in P voa de Varzim Portugal in July 2016 The 79 revised full papers and 10 short papers presented were carefully reviewed and selected from 167 submissions The papers are organized in the following topical sections Advances in Data Analytics and Pattern Recognition with Applications Image Enhancement and Restoration Image Quality Assessment Image Segmentation Pattern Analysis and Recognition Feature Extraction Detection and Recognition Matching Motion and Tracking 3D Computer Vision RGB D Camera Applications Visual Perception in Robotics Biometrics Biomedical Imaging Brain Imaging Cardiovascular Image Analysis Image Analysis in Ophthalmology Document Analysis Applications and Obituaries The chapter Morphological Separation of Clustered Nuclei in Histological Images is published open access under a CC BY 4 0 license at link springer com **Esercitazioni matematiche**

pubblicazione del Circolo matematico di Catania ad uso degli studenti universitari ,1921 **An Idiot's Fugitive Essays on Science** C. Truesdell,2012-12-06 When after the agreeable fatigues of solicitation Mrs Millamant set out a long bill of conditions subject to which she might by degrees dwindle into a wife Mirabell offered in return the condition that he might not thereby be beyond measure enlarged into a husband With age and experience in research come the twin dangers of dwindling into a philosopher of science while being enlarged into a dotard The philosophy of science I believe should not be the preserve of senile scientists and of teachers of philosophy who have themselves never so much as understood the contents of a textbook of theoretical physics let alone done a bit of mathematical research or even enjoyed the confidence of a creating scientist On the latter count I run no risk Any reader will see that I am untrained though not altogether unread in classroom philosophy Of no ignorance of mine do I boast indeed I regret it but neither do I find this one ignorance fatal here for few indeed of the great philosophers to explicate whose works hodiernal professors of phil osophy destroy forests of pulp were themselves so broadly and specially trained as are their scholiasts In attempt to palliate the former count I have chosen to collect works written over the past thirty years some of them not published before and I include only a few very recent essays **Positive Operators and Fixed-Point Theorems with Applications** S. A. Mohiuddine,Anupam Das,Dragan S. Djordjević,2025-05-29 This book presents original research on the theory of positive operators alongside fixed point theorems and their diverse applications It introduces various positive operators and explores their approximation properties including Korovkin type theorems Voronovskaja type results convergence rate and other related findings Additionally the book addresses the existence of solutions for various differential and integral equations in different Banach spaces by using Darbo

type fixed point theorems This book also presents an interplay between positive operators and fixed point theory Each chapter is self contained addressing a current problem and outlining solutions and potential applications The chapters provide sufficient background to ensure that new definitions and results can be understood independently

Mathematical Structures of Ergodicity and Chaos in Population Dynamics Paweł J. Mitkowski, 2020-09-19 This book concerns issues related to biomathematics medicine or cybernetics as practiced by engineers Considered population dynamics models are still in the interest of researchers and even this interest is increasing especially now in the time of SARS CoV 2 coronavirus pandemic when models are intensively studied in order to help predict its behaviour within human population The structures of population dynamics models and practical methods of finding their solutions are discussed Finally the hypothesis of the existence of non trivial ergodic properties of the model of erythropoietic response dynamics formulated by A Lasota in the form of delay differential equation with unimodal feedback is analysed The research can be compared with actual medical data as well as shows that the structures of population models can reflect the dynamic structures of reality *Almost Periodicity and Almost Automorphy* Abdallah Afoukal, Brahim Es-sebbar, Khalil Ezzinbi, Gaston Mandata N'Guérékata, 2025-03-03 When we study differential equations in Banach spaces whose coefficients are linear unbounded operators we feel that we are working in ordinary differential equations however the fact that the operator coefficients are unbounded makes things quite different from what is known in the classical case Examples or applications for such equations are naturally found in the theory of partial differential equations More specifically if we give importance to the time variable at the expense of the spatial variables we obtain an ordinary differential equation with respect to the variable which was put in evidence Thus for example the heat or the wave equation gives rise to ordinary differential equations of this kind Adding boundary conditions can often be translated in terms of considering solutions in some convenient functional Banach space The theory of semigroups of operators provides an elegant approach to study this kind of systems Therefore we can frequently guess or even prove theorems on differential equations in Banach spaces looking at a corresponding pattern in finite dimensional ordinary differential equations **Oxford, Cambridge, and Dublin**

Messenger of Mathematics William Allen Whitworth, Charles Taylor, James Whitbread Lee Glaisher, 1928 *Oxford, Cambridge, and Dublin Messenger of Mathematics*, 1928 *The Messenger of Mathematics*, 1928 *Partial Differential Equations and Functional Analysis* J. Cea, D. Chenais, Giuseppe Geymonat, J.L. Lions, 2012-12-06 Pierre Grisvard one of the most distinguished French mathematicians died on April 22 1994 A Conference was held in November 1994 out of which grew the invited articles contained in this volume All of the papers are related to functional analysis applied to partial differential equations which was Grisvard's specialty Indeed his knowledge of this area was extremely broad He began his career as one of the very first students of Jacques Louis Lions and in 1965 he presented his State Thesis on interpolation spaces using in particular spectral theory for linear operators in Banach spaces After 1970 he became a specialist in the

study of optimal regularity for partial differential equations with boundary conditions He studied singularities coming from coefficients boundary conditions and mainly non smooth domains and left a legacy of precise results which have been published in journals and books Pierre Grisvard spent most of his career as a full professor at the University of Nice where he started in 1967 For shorter or longer periods he visited several foreign countries and collaborated with some of the most famous mathematicians in his field He was also an excellent organizer and directed a large number of Ph D students Finally this volume contains a bibliography of Grisvard s works as well as one paper which he wrote and which has not been published before

Positivity in Arakelov Geometry over Adelic Curves Huayi Chen, Atsushi Moriawaki, 2024-08-21 This monograph presents new research on Arakelov geometry over adelic curves a novel theory of arithmetic geometry developed by the authors It explores positivity conditions and establishes the Hilbert Samuel formula and the equidistribution theorem in the context of adelic curves Connections with several classical topics in Arakelov geometry and Diophantine geometry are highlighted such as the arithmetic Hilbert Samuel formula positivity of line bundles equidistribution of small subvarieties and theorems resembling the Bogomolov conjecture Detailed proofs and explanations are provided to ensure the text is accessible to both graduate students and experienced researchers
