The Aging Body Susan Krauss Whitbourne, 2012-12-06 The objective of this book is to provide information that will be useful to people in a variety of disciplines who wish to learn more about normal aging processes in the human body Although gerontologists in the biological sciences are making great strides in research on human aging and documenting this work in monographs texts and review chapters this information is generally not easily accessible nor is it comprehensible to nonprofessionals in these fields This book is intended to provide a summary of this work along with its implications for psychological functioning of the aging individual The majority of the book is devoted to describing the results of research on the physiological changes in the human body with aging and to seeking explanations for these age effects This description has been approached in such a way as to make it readable for the nonspecialist but also to focus on research issues that will be useful reading for those who are currently working in these particular areas In addition throughout the book I have tried to develop some themes regarding physiological and psychological adaptation during adulthood

The Aging Nervous System Gabe J. Maletta, Francis J. Pirozzolo, 1980

Molecular Neurobiology of the Olfactory System F.L. Margolis, T.V. Getchell, 2013-11-11 The sense of smell and the olfactory system have been a subject of intrinsic interest for millennia Inquiry into the structure and function of the olfactory system is based on a long tradition that dates back at least to the ancient Greeks The mechanistic basis for the sensitivity and

selectivity of this chemosensory detection system has always posed a challenge and remained largely a mystery Recently there has been a renaissance of interest in it and especially in the application of contemporary techniques of biochemistry and cellular and molecular biology In this volume current research utilizing these approaches is discussed in depth by a group of scientists who are among the current leaders in the applications of these techniques to the olfactory system These authors address a wide range of questions that bear directly on the olfactory system but have broader biological implications as well The various chapters have been grouped into five broad subject areas that emphasize diverse but related questions Transduction and Ligand Receptor Interactions considers the biochemical bases of stimulus access interaction transduction elimination and information processing
